Since every test taker has unique learning styles, TestPassed has designed these formats to meet the practice needs of Salesforce-Data-Cloud exam candidates.

Salesforce Data Cloud Accredited Professional Exam Sample Questions (Q135-Q140):

NEW QUESTION # 135

Northern Trail Outfitters wants to use some of its Marketing Cloud data in Data Cloud.
Which engagement channel data will require custom integration?

- A. SMS
- B. Mobile push
- C. CloudPage

- D. Email

Answer: C

Explanation:

CloudPage is a web page that can be personalized and hosted by Marketing Cloud. It is not one of the standard engagement channels that Data Cloud supports out of the box. To use CloudPage data in Data Cloud, a custom integration is required. The other engagement channels (SMS, email, and mobile push) are supported by Data Cloud and can be integrated using the Marketing Cloud Connector or the Marketing Cloud API. NEW QUESTION # 136

What happens if no file name is specified in AWS S3 data stream during ingestion?

- A. The ingestion setup can't be completed without specifying the filename.
- B. The system chooses the first file found in the S3 bucket
- **C. The system does not fetch any file and the data stream shows an error.**
- D. The ingestion setup is completed but the data stream shows 0 records

Answer: C

Explanation:

If no file name is specified in AWS S3 data stream during ingestion, the system does not fetch any file and the data stream shows an error. AWS S3 data stream is a feature that allows you to stream data from Amazon Web Services Simple Storage Service (AWS S3) to Data Cloud in near real time. You need to specify the file name or prefix of the files that you want to ingest from your S3 bucket. If you leave this field blank, the system cannot find any matching files and returns an error message. References: AWS S3 Data Stream

NEW QUESTION # 137

A consultant needs to update a field in CRM as soon as a record gets updated in the DMO. Which feature should the consultant use?

- A. Streaming data transform
- **B. Data actions**
- C. Data share target
- D. Rapid segments

Answer: B

Explanation:

When a record in the Data Model Object (DMO) is updated, Data Actions can be used to immediately trigger updates in an external system like Salesforce CRM.

Data Actions allow for real-time or near-real-time updates to external systems.

When a record in the DMO is updated, a Data Action can push updates to CRM fields.

This ensures that CRM always reflects the latest Data Cloud updates without manual intervention.

Why Not A?

Data Share Targets are used for sharing data externally (e.g., Snowflake) but do not update CRM fields directly.

Why Not C?

Rapid Segments are used for fast audience segmentation, not for updating CRM fields.

Why Not D?

Streaming Data Transforms are used for real-time data processing, but they do not update CRM fields directly.

NEW QUESTION # 138

A customer wants to use the transactional data from their data warehouse in Data Cloud. They are only able to export the data via a SFTP site. What are two recommended ways to bring this data into Data Cloud?

- A. Manually import the file using the Data Import Wizard
- B. Import the file into Google Cloud Storage and ingest with the Cloud Storage Connector
- C. Import the file into Amazon S3 and ingest with the Cloud Storage Connector
- D. Utilize Salesforce's Data Loader application to perform a bulk upload from a desktop

Answer: B,C

Explanation:

These two options are recommended ways to bring transactional data from a data warehouse into Data Cloud via a SFTP site. You can use the Cloud Storage Connector to ingest files from Google Cloud Storage or Amazon S3 buckets into Data Cloud.

NEW QUESTION # 139

How can attribute names be modified to match a naming convention in Cloud File Storage target?

- A. Update field names in the data model
- B. Set preferred attribute names when configuring activation
- C. Update attribute names in the data stream configuration
- D. Use a formula field to update the field name in an activation

Answer: A

Explanation:

You can modify the attribute names in the data model by editing the field label or API name of the corresponding field. This will change how the attribute name appears in the Cloud File Storage target. Reference: https://help.salesforce.com/s/articleView?id=sf.c360_a_data_cloud_data_model.htm&type=5

NEW QUESTION # 140

.....
