## 2026 Test SPLK-1003 Simulator Fee - Splunk Splunk Enterprise Certified Admin - Valid Composite Test SPLK-1003 Price

So, when you get the Splunk Enterprise Certified Admin SPLK-1003 exam dumps material for your Splunk Enterprise Certified Admin SPLK-1003 certification exam, you have to check whether they are providing you the Splunk Enterprise Certified Admin SPLK-1003 Practice Test or not. You must choose those who shall give you the Splunk Enterprise Certified Admin SPLK-1003 questions and not those who are giving you copied sheets only.

## Splunk Enterprise Certified Admin Sample Questions (Q182-Q187):

**NEW QUESTION # 182**
In case of a conflict between a whitelist and a blacklist input setting, which one is used?

- A. Whichever is entered into the configuration first.

- B. They cancel each other out.
- C. Whitelist
- D. Blacklist

**Answer: D**

Explanation:
Explanation
https://docs.splunk.com/Documentation/Splunk/8.0.4/Data/Whitelistorblacklistspecificincomingdata
"It is not necessary to define both an allow list and a deny list in a configuration stanza. The settings are independent. If you do define both filters and a file matches them both, Splunk Enterprise does not index that file, as the blacklist filter overrides the whitelist filter."
Source:https://docs.splunk.com/Documentation/Splunk/8.1.0/Data/Whitelistorblacklistspecificincomingdata

**NEW QUESTION # 183**
The following stanza is active in indexes.conf:
[cat_facts]
maxHotSpanSecs = 3600
frozenTimePeriodInSecs = 2630000
maxTota1DataSizeMB = 650000
All other related indexes.conf settings are default values.
If the event timestamp was 3739283 seconds ago, will it be searchable?

- A. No, because the event time is greater than the retention time.
- B. No, because the index will have exceeded its maximum size.
- C. Yes, only if the bucket is still hot.
- D. Yes, only if the index size is also below 650000 MB.

**Answer: A**

Explanation:
Explanation
The correct answer is D. No, because the event time is greater than the retention time.
According to the Splunk documentation1, the frozenTimePeriodInSecs setting in indexes.conf determines how long Splunk software retains indexed data before deleting it or archiving it to a remote storage. The default value is 188697600 seconds, which is equivalent to six years. The setting can be overridden on a per-index basis.
In this case, the cat_facts index has a frozenTimePeriodInSecs setting of 2630000 seconds, which is equivalent to about 30 days. This means that any event that is older than 30 days from the current time will be removed from the index and will not be searchable. The event timestamp was 3739283 seconds ago, which is equivalent to about 43 days. This means that the event is older than the retention time of the cat_facts index and will not be searchable.
The other settings in the stanza, such as maxHotSpanSecs and maxTota1DataSizeMB, do not affect the retention time of the events. They only affect the size and duration of the buckets that store the events.

**NEW QUESTION # 184**
When are knowledge bundles distributed to search peers?

- A. After a user logs in.
- B. When Splunk is restarted.
- C. When a distributed search is initiated.
- D. When adding a new search peer.

**Answer: C**

Explanation:
Explanation
"The search head replicates the knowledge bundle periodically in the background or when initiating a search. "
"As part of the distributed search process, the search head replicates and distributes its knowledge objects to its search peers, or indexers. Knowledge objects include saved searches, event types, and other entities used in searching accorss indexes. The search head needs to distribute this material to its search peers so that they can properly execute queries on its behalf."

**NEW QUESTION # 185**
Which of the following is valid distribute search group?
A)
B)
C)
D)

- A. Option C
- B. Option B
- C. option A
- D. Option D

**Answer: D**

**NEW QUESTION # 186**
What is the default purpose of a Splunk Deployment Server?

- A. To stage and deploy updates to $SPLUNK_HOME/etc/apps/
- B. To stage and deploy updates to /etc/pcer-apps/
- C. To stage and deploy updates to /etc/manager-apps/
- D. To stage and deploy updates to /etc/deployment-apps/

**Answer: D**

Explanation:
The Splunk Deployment Server is a centralized component used to distribute configurations and apps to multiple deployment clients, such as forwarders, indexers, or other Splunk instances.
By default, all deployment apps that the Deployment Server manages are stored in the directory:
$SPLUNK_HOME/etc/deployment-apps/
Each subdirectory under this path represents a deployment app that can be pushed to one or more clients based on rules defined in serverclass.conf.
The Deployment Server stages updates in /etc/deployment-apps/ and deploys them to clients based on matching server classes. This mechanism allows centralized management and configuration consistency across distributed Splunk environments.
Reference (Splunk Documentation):
* Splunk Enterprise Admin Manual # Use the deployment server to deploy configurations
* serverclass.conf.spec and example # "Deployment server staging area is $SPLUNK_HOME/etc /deployment-apps/."
* Splunk Docs: "About deployment server"

**NEW QUESTION # 187**
.....

In today's competitive industry, only the brightest and most qualified candidates are hired for high-paying positions.
