## 最新Amazon CLF-C02試題 - CLF-C02考試備考經驗

所有購買 Testpdf題庫學習資料網“Amazon CLF-C02 題庫學習資料”的考生，都將獲半年免費升級的售后服務，確保考生一次通過。我們網站的學習資料覆蓋了當前最新的知識點。如果你發現我們的題庫學習資料，存在重大的質量問題，一經核實，我們會無條件退換你的購買費用。事實證明，大多數考生對 Amazon 的 CLF-C02 權威考試題庫學習資料充滿信任，如果你不確定，可以免費下載 CLF-C02 考題學習資料試用版本，這樣方便你了解真實考試軟件界面，熟悉操作流程，讓 CLF-C02 試題的質量得到保證。

## 最新的 AWS Certified Foundational CLF-C02 免費考試真題 (Q36-Q41):

### 問題 #36

A company uses Amazon EC2 instances to run its application. The application needs to be available and running continuously for three or more years. What type of EC2 instance should the company purchase for a discount on the EC2 pricing?

- A. EC2 Fleet
- B. On-Demand Instances
- C. Reserved Instances
- D. Spot Instances

答案: C

### 問題 #37

Which AWS feature provides a no-cost platform for AWS users to join community groups, ask questions, find answers, and read community-generated articles about best practices?

- A. AWS 10
- **B. AWS re:Post**
- C. AWS Enterprise Support
- D. AWS Knowledge Center

**答案： B**

解題說明：

AWS re:Post is a no-cost platform for AWS users to join community groups, ask questions, find answers, and read community-generated articles about best practices. AWS re:Post is a social media platform that connects AWS users with each other and with AWS experts. Users can create posts, comment on posts, follow topics, and join groups related to AWS services, solutions, and use cases. AWS re:Post also features live event feeds, community stories, and AWS Hero profiles. AWS re:Post is a great way to learn from the AWS community, share your knowledge, and get inspired. References:

**問題 #38**

A company is running its application in the AWS Cloud and wants to protect against a DDoS attack. The company's security team wants near real-time visibility into DDoS attacks.

Which AWS service or traffic filter will meet these requirements with the MOST features for DDoS protection?

- A. Amazon GuardDuty
- **B. AWS Shield Advanced**
- C. Network ACLs
- D. AWS Shield

**答案： B**

解題說明：

AWS Shield Advanced is a managed Distributed Denial of Service (DDoS) protection service that safeguards applications running on AWS. AWS Shield Advanced provides you with 24x7 access to the AWS DDoS Response Team (DRT) and protection against DDoS attacks of any size or duration. AWS Shield Advanced also provides near real-time visibility into attacks, advanced attack mitigation capabilities, and integration with AWS WAF and AWS Firewall Manager<sup>1</sup>. AWS Shield is a standard service that provides always-on detection and automatic inline mitigations to minimize application downtime and latency, but it does not offer the same level of features and support as AWS Shield Advanced<sup>2</sup>. Amazon GuardDuty is a threat detection service that continuously monitors for malicious activity and unauthorized behavior, but it does not provide DDoS protection<sup>3</sup>. Network ACLs are stateless filters that can be associated with a subnet to control the traffic to and from the subnet, but they are not designed to protect against DDoS attacks

**問題 #39**

A company wants its Amazon EC2 instances to share the same geographic area but use redundant underlying power sources. Which solution will meet these requirements?

- A. Use EC2 instances in the same edge location and the same Availability Zone.
- B. Use Amazon CloudFront as the database for the EC2 instances.
- C. Use EC2 instances in AWS OpsWorks stacks in different AWS Regions.
- **D. Use EC2 instances across multiple Availability Zones in the same AWS Region.**

**答案： D**

解題說明：

Explanation

Using EC2 instances across multiple Availability Zones in the same AWS Region is a solution that meets the requirements of sharing the same geographic area but using redundant underlying power sources. Availability Zones are isolated locations within an AWS Region that have independent power, cooling, and physical security. They are connected through low-latency, high-throughput, and highly redundant networking. By launching EC2 instances in different Availability Zones, users can increase the fault tolerance and

availability of their applications. Amazon CloudFront is a content delivery network (CDN) service that speeds up the delivery of web content and media to end users by caching it at the edge locations closer to them. It is not a database service and cannot be used to store operational data for EC2 instances. Edge locations are sites that are part of the Amazon CloudFront network and are located in many cities around the world. They are not the same as Availability Zones and do not provide redundancy for EC2 instances. AWS OpsWorks is a configuration management service that allows users to automate the deployment and management of applications using Chef or Puppet. It can be used to create stacks that span multiple AWS Regions, but this would not meet the requirement of sharing the same geographic area.

#### 問題 #40

Which option is an advantage of AWS Cloud computing that minimizes variable costs?

- A. Economies of scale
- B. Global reach
- C. High availability
- D. Agility

答案： A

解題說明：

Economies of scale is the advantage of AWS Cloud computing that minimizes variable costs. Economies of scale refers to the reduction in the cost per unit as the output increases. AWS Cloud computing leverages economies of scale by providing a large pool of shared resources that can be accessed on demand and paid for as needed. AWS Cloud computing also passes the cost savings to the customers by offering lower prices and discounts. For more information, see Economies of Scale and AWS Pricing.

#### 問題 #41

.....

CLF-C02 認證是互聯網界具有極大聲望的網路技能認證，在全球，通過IBM認證考試的工程師，平均年薪在10萬元以上。通過 HP 認證考試的工程師，平均年薪在30萬元以上。獲得 Amazon 的 CLF-C02 認證的工程師，平均年薪也不低於20萬人民幣。據說，這還只是基本工資，不包括獎金，紅利和其他非工資性補貼。難怪美國副總統戈爾曾把 Amazon CLF-C02 認證恰當而幽默地稱為“獲得高技術，高薪水的頭等艙船票”。
