## Topic: Real CompTIA 220-1101 Exam Practice Questions

If you are clueless about the oncoming exam, our 220-1101 practice materials are trustworthy materials for your information. More than tens of thousands of exam candidate coincide to choose our 220-1101 practice materials. Our 220-1101 practice materials are perfect for they come a long way on their quality. If you commit any errors, which can correct your errors with accuracy rate more than 98 percent. To get more useful information about our 220-1101 practice materials, please read the following information.

CompTIA A+ certification is an important credential for individuals looking to enter the IT field. It is recognized globally and is often

a requirement for many entry-level IT positions. CompTIA A+ Certification Exam: Core 1 certification is also a stepping stone to more advanced certifications, such as the CompTIA Network+, Security+, and Cybersecurity Analyst (CySA+) certifications. The CompTIA A+ Certification Exam: Core 1 (220-1101) is the starting point for individuals looking to pursue a career in IT support and is an essential step towards achieving the CompTIA A+ certification.

CompTIA 220-1101 Exam consists of 90 multiple-choice and performance-based questions that must be completed within 90 minutes. 220-1101 exam covers a wide range of topics, including computer hardware, operating systems, networking, mobile devices, and troubleshooting. 220-1101 exam is designed for IT professionals who have 9-12 months of experience in IT support or IT operational roles and wish to enhance their knowledge and skills to advance their careers. Passing 220-1101 exam demonstrates that an individual has the foundational knowledge and skills required to perform IT support and technical roles.

## CompTIA A+ Certification Exam: Core 1 Sample Questions (Q538-Q543):

### NEW QUESTION # 538

A remote user called the help desk to report a notification indicating there is limited or no connectivity. The user can access local file folders and other local machines but none of the organization's servers or network items. Web pages do not appear to function either. Which of the following is the MOST likely cause of the issue?

- A. The user's internet connection is down.
- B. The user's switch has stopped working.
- C. The user's domain account is locked out.
- D. The user's IP address needs to be renewed.

**Answer: A**

Explanation:

Explanation

Based on the information provided in the scenario, the most likely cause of the issue is that the user's internet connection is down (option A). This would explain why the user is unable to access any of the organization's servers or network items and why web pages are not functioning. However, since the user can still access local file folders and other local machines, it suggests that their local network is still functioning.

The user can access local file folders and other local machines but none of the organization's servers or network items, indicating that the issue is with the user's internet connection, not with the user's domain account, switch, or IP address.

When a user receives a notification indicating that there is limited or no connectivity, it means that their device is unable to establish a connection to the network. In this scenario, the user can access local file folders and other local machines but is unable to access any of the organization's servers or network items and web pages are not functioning. This suggests that the issue is with the user's internet connection.

An internet connection allows a device to communicate with other devices and servers outside of its local network. If the internet connection is down or not functioning properly, the device will be unable to access any resources outside of its local network. This would explain why the user in this scenario can still access local resources but is unable to access any of the organization's servers or network items.

### NEW QUESTION # 539

Which of the following protocols provides the fastest bandwidth?

- A. 802.11a
- B. 802.11ax
- C. 802.11n
- D. 802.11ac

**Answer: B**

Explanation:

Explanation

The 802.11ax protocol, also known as Wi-Fi 6, provides the fastest bandwidth among the options listed. It can achieve up to 10 Gbps of data transfer rate, using technologies such as OFDMA, MU-MIMO, and 1024-QAM.

The 802.11ac protocol, or Wi-Fi 5, is the second fastest, with a maximum of 3.46 Gbps, followed by the 802.11n protocol, or Wi-Fi 4, with a maximum of 600 Mbps. The 802.11a protocol is the slowest, with a maximum of 54 Mbps

#### NEW QUESTION # 540

A user is unable to access secure applications on their tablet when working from home a couple days per week, but the applications work when in the office. Which of the following services most likely needs to be reconfigured to allow for remote work?

- A. Near-field communication
- B. Global Positioning System
- C. Wi-Fi Protected Access
- **D. Mobile device management**

**Answer: D**

Explanation:

Mobile Device Management (MDM) software often controls access to corporate resources based on location, network, or VPN status. If the MDM is not configured to allow access from outside the office or via home networks, the apps may be blocked. This is the most probable cause if apps work only on-premises.

\* Option A: GPS is used for location services, not access control.

\* Option C: WPA is a Wi-Fi security protocol, not related to access restrictions.

\* Option D: NFC enables close-range communication - irrelevant to app access.

CompTIA A+ Core 1 Exam Objective Reference:

\* Objective 1.6: Given a scenario, configure basic mobile device network connectivity and application support.

#### NEW QUESTION # 541

When a user's workstation is turned on, a message displays indicating that the date and time are incorrect. Other computers on the network do not display this message. Which of the following is the most likely cause of this issue?

- A. The BIOS is not updated.
- B. The time server is misconfigured.
- C. The CPU is slow.
- **D. The CMOS battery is discharged.**

**Answer: D**

Explanation:

The CMOS (complementary metal-oxide-semiconductor) is a small chip on the motherboard that stores the BIOS settings, including the date and time. The CMOS battery is a coin cell battery that provides power to the CMOS chip when the computer is turned off, so that the BIOS settings are not lost. If the CMOS battery is discharged, the CMOS chip will lose its data, and the date and time will be reset to the default values. This will cause a message to display indicating that the date and time are incorrect when the computer is turned on. The other computers on the network do not display this message because they have functional CMOS batteries. The most likely cause of this issue is the CMOS battery is discharged, and it needs to be replaced with a new one.

#### NEW QUESTION # 542

A user in a medical office contacts a technician regarding a printer that is used to print A4-sized labels. After the labels are printed, they mistakenly contain white space in the middle of the page. Which of the following would MOST likely be the cause?

- **A. Page orientation**
- B. Contaminated fuser
- C. Worn rollers
- D. A misfeed

**Answer: A**

Explanation:

it normally uses A4 sized labels and it contains white space in the middle of pages so it went from sized labels to full pages
