When you have adequately prepared for the Pure Certified Portworx Enterprise Professional (PEP) Exam (Portworx-Enterprise-Professional) questions, only then you become capable of passing the Pure Storage exam. There is no purpose in attempting the Pure Storage Portworx-Enterprise-Professional certification exam if you have not prepared with PrepPDF's Free Pure Storage Portworx-Enterprise-Professional PDF Questions. It's time to get serious if you want to validate your abilities and earn the Pure Storage Portworx-Enterprise-Professional Certification. If you hope to pass the Pure Certified Portworx Enterprise Professional (PEP) Exam exam on your first attempt, you must be studied with real Portworx-Enterprise-Professional exam questions verified by Pure Storage Portworx-Enterprise-Professional.

Pure Storage Portworx-Enterprise-Professional Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Business Continuity: This domain measures the skills of Disaster Recovery Planners and IT Continuity Managers in implementing backup, recovery, and failover strategies. It ensures candidates understand how to sustain business operations and data availability using Portworx features.
Topic 2	<ul style="list-style-type: none">• Security: This section focuses on Security Engineers and Compliance Officers responsible for enforcing security measures in container storage environments. Topics include managing encryption, access control, and compliance policies to protect stored data.
Topic 3	<ul style="list-style-type: none">• Observability and Troubleshooting: This section assesses the expertise of Support Engineers and System Administrators in monitoring storage deployments and troubleshooting issues. Candidates learn to use observability tools and techniques to maintain system health and resolve performance problems effectively.
Topic 4	<ul style="list-style-type: none">• Operations and Administration: This section of the exam measures the skills of Storage Administrators and Kubernetes Operators and covers managing cluster operations and administering container storage environments using Portworx. Candidates demonstrate the ability to efficiently manage and operate storage clusters in production environments.
Topic 5	<ul style="list-style-type: none">• Deploy and Install: This domain targets DevOps Engineers and Infrastructure Specialists and focuses on deploying and installing Portworx storage solutions. It includes configuring and setting up storage clusters to support containerized applications reliably and securely.

Facts proved that if you do not have the certification, you will be washed out by the society. So it is very necessary for you to try your best to get the Portworx-Enterprise-Professional certification in a short time. If you are determined to get the certification, our Portworx-Enterprise-Professional question torrent is willing to give you a hand; because the study materials from our company will be the best study tool for you to get the certification. Now I am going to introduce our Portworx-Enterprise-Professional Exam Question to you in detail, please read our introduction carefully, we can make sure that you will benefit a lot from it. If you are interest in it, you can buy it right now.

Pure Storage Pure Certified Portworx Enterprise Professional (PEP) Exam Sample Questions (Q65-Q70):

NEW QUESTION # 65

What command allows a Portworx admin to create a cloud credential for the Object Store?

- A. pxctl credentials generate
- **B. pxctl credentials create**
- C. pxctl service credentials create

Answer: B

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

In Portworx, managing credentials for cloud object stores is vital to enable features like cloud snapshots and backups. The command `pxctl credentials create` is used to create and register cloud credentials with the Portworx cluster. This command allows administrators to specify provider details such as AWS, Google Cloud, or Azure, and input necessary access keys, secret keys, regions, and endpoints. Proper credential configuration enables Portworx to authenticate with external object stores securely, ensuring reliable data movement and disaster recovery operations. The CLI facilitates easy credential management, including listing, updating, and deleting credentials as needed. Official Portworx documentation highlights `pxctl credentials create` as the authoritative command for establishing cloud storage access, ensuring security best practices by managing credentials centrally within the Portworx control plane **【Pure Storage Portworx CLI Guide source】** .

NEW QUESTION # 66

Which flag in the Portworx StorageCluster spec enables telemetry?

- A. `spec.csi.enabled`
- **B. `spec.telemetry.enabled`**
- C. `spec.autopilot.enabled`

Answer: B

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

Telemetry in Portworx refers to the automated collection and reporting of cluster performance and health metrics to Pure1 or other monitoring services. To enable telemetry, the `spec.telemetry.enabled` flag must be set to true in the StorageCluster Custom Resource Definition (CRD). This setting activates the telemetry pod on each node, which collects data such as resource usage, storage capacity, and errors, then securely uploads it to Pure Storage's management platform. Enabling telemetry helps administrators gain insights into cluster performance trends, preemptively identify issues, and optimize resource utilization. The Portworx operator respects this flag during installation and upgrades to ensure telemetry is consistently configured. Neither `spec.autopilot.enabled` (which controls the Autopilot feature) nor `spec.csi.enabled` (which controls CSI driver deployment) affects telemetry settings. Official Portworx documentation highlights this flag as critical for activating health monitoring and analytics features within Portworx clusters **【Pure Storage Portworx Telemetry Guide source】** .

NEW QUESTION # 67

Which 3 secret stores are supported by Portworx?

- A. AWS KMS, Oracle Key Vault, Hashicorp Vault

- B. AWS KMS, Google Cloud KMS, Kubernetes Secrets
- C. IBM KMS, Hashicorp Vault, Gemalto SafeNet KeySecure

Answer: B

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

Portworx integrates with three primary external secret stores to manage encryption keys securely: AWS Key Management Service (AWS KMS), Google Cloud Key Management Service (Google Cloud KMS), and Kubernetes Secrets. AWS KMS enables secure key storage and management for workloads running in AWS, leveraging native cloud security features. Google Cloud KMS provides similar key management for Google Cloud environments, allowing seamless integration with Google's security infrastructure. Kubernetes Secrets provide an on-premises or hybrid cloud method to store encryption keys and sensitive configuration securely within Kubernetes clusters, suitable for private data centers or cloud-agnostic deployments. This multi-cloud and hybrid cloud compatibility enable Portworx to meet diverse customer requirements for key management and regulatory compliance. Portworx security documentation details the setup, configuration, and best practices for each supported secret store to ensure data encryption keys are managed securely and efficiently across environments **【Pure Storage Portworx Security Guide source】** .

NEW QUESTION # 68

An application team is preparing to deploy an ElasticSearch application and wants all Portworx volumes created in 6 specific Kubernetes nodes.

Which Portworx feature should they use to achieve this?

- A. Stork
- B. Volume placement strategy
- C. Autopilot

Answer: B

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

To ensure Portworx volumes for an ElasticSearch application are created only on specific Kubernetes nodes, the Volume Placement Strategy feature is used. This feature allows administrators to define node affinity or anti-affinity rules that restrict volume provisioning to a subset of nodes. By tagging the six nodes with appropriate labels and configuring the StorageClass or volume parameters to respect these labels, Portworx guarantees that volumes will only be provisioned on those nodes. This targeted volume placement is critical for performance optimization, data locality, and compliance with infrastructure constraints. Autopilot automates scaling and Stork manages storage-aware scheduling but does not directly control volume node placement. The Portworx deployment documentation highlights Volume Placement Strategy as the tool for precise volume-to-node mapping in Kubernetes clusters **【Pure Storage Portworx Deployment Guide source】** .

NEW QUESTION # 69

An infrastructure admin wants to restrict installing Portworx on two nodes.

What label does the node need to have?

- A. px/storage-node=false
- B. px/service=stop
- C. px/enabled=false

Answer: C

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

Portworx uses node labeling as a mechanism to control on which Kubernetes nodes Portworx is installed and allowed to operate. To restrict Portworx installation on specific nodes, those nodes should be labeled with px/enabled=false. This label tells the Portworx Operator or installation scripts to exclude these nodes from Portworx deployment, preventing Portworx daemons from running there. This feature is useful for reserving nodes for non-storage workloads or avoiding unsupported hardware. Labels like px/service=stop or px/storage-node=false are not recognized by Portworx as controls for installation exclusion. The official Portworx deployment and node labeling documentation specify px/enabled=false as the standard method for controlling node participation in the storage cluster, offering administrators fine-grained control over cluster topology and resource allocation **【Pure Storage Portworx Deployment Guide source】** .
