Get Unparalleled Exam CWSP-208 Vce and Pass Exam in First Attempt

2026 Latest TroytecDumps CWSP-208 PDF Dumps and CWSP-208 Exam Engine Free Share: https://drive.google.com/open?id=1Dr9ATXpbfNr9dXiCpSWkHneCmWTcfeyl

With rigorous analysis and summary of CWSP-208 exam, we have made the learning content easy to grasp and simplified some parts that beyond candidates' understanding. In addition, we add diagrams and examples to display an explanation in order to make the interface more intuitive. Our CWSP-208 exam questions will ease your pressure of learning, using less Q&A to convey more important information, thus giving you the top-notch using experience if you study with our CWSP-208 Training Materials. And with the high pass rate of 99% to 100%, the CWSP-208 exam will be a piece of cake for you.

Recent years many ambitious young men take part in CWNP certification exams. Many candidates may wonder how to prepare for CWSP-208 exam (questions and answers). My advice is that firstly you should inquire about exam details from exam center such as exam cost, how many times you can take exam per year and the exact date, how long the real test last, the examination requirements and syllabus. And then purchase our CWSP-208 Exam Questions And Answers, you will clear exams certainly.

New Soft CWSP-208 Simulations & Latest CWSP-208 Braindumps

Everyone wants to have a good job and decent income. But if they don't have excellent abilities and good major knowledge they are hard to find a decent job. Passing the test CWSP-208 certification can make you realize your dream and find a satisfied job. Our CWSP-208 study materials are a good tool that can help you pass the CWSP-208 Exam easily. You needn't spend too much time to learn it. Our CWSP-208 exam guide is of high quality and if you use our product the possibility for you to pass the CWSP-208 exam is very high as 99% to 100%.

CWNP Certified Wireless Security Professional (CWSP) Sample Questions (Q67-Q72):

NEW QUESTION # 67
ABC Company uses the wireless network for highly sensitive network traffic. For that reason, they intend to protect their network in all possible ways. They are continually researching new network threats and new preventative measures. They are interested in the security benefits of 802.11w, but would like to know its limitations.
What types of wireless attacks are protected by 802.11w? (Choose 2)

- A. RF DoS attacks
- B. Layer 2 Disassociation attacks
- C. Social engineering attacks
- D. Robust management frame replay attacks

Answer: B,D

Explanation:
802.11w, also known as Protected Management Frames (PMF), is designed to protect specific types of 802.11 management frames such as disassociation and deauthentication frames. These frames were previously sent unencrypted and could be spoofed by attackers to disconnect clients (DoS attacks). With 802.11w, these frames are cryptographically protected, mitigating such attacks. PMF also includes replay protection for these management frames, preventing attackers from capturing and replaying them to disrupt network connectivity.

NEW QUESTION # 68
What TKIP feature was introduced to counter the weak integrity check algorithm used in WEP?

- A. Michael
- B. 32-bit ICV (CRC-32)
- C. Sequence counters
- D. Block cipher support
- E. RC5 stream cipher

Answer: A

Explanation:
TKIP (used with WPA) introduced "Michael" as a message integrity check (MIC) algorithm to replace the insecure CRC-32 used in WEP. Michael:
Adds tamper protection to each packet.
Helps detect packet forgery.
Incorrect:
A). CRC-32 was used in WEP and proven weak.
B). Sequence counters help prevent replay attacks, not integrity checking.
C). RC5 is not used in WLAN security.
E). TKIP does not support block ciphers-it uses RC4, a stream cipher.

CWSP-208 Study Guide, Chapter 3 (TKIP Security Features)

NEW QUESTION # 69
What statement accurately describes the functionality of the IEEE 802.1X standard?

- A. Port-based access control, which allows three frame types to traverse the uncontrolled port: EAP, DHCP, and DNS.
- B. Port-based access control with support for authenticated-user VLANs only
- C. Port-based access control with dynamic encryption key management and distribution
- D. Port-based access control with EAP encapsulation over the LAN (EAPoL)
- E. Port-based access control with mandatory support of AES-CCMP encryption

Answer: D

Explanation:
IEEE 802.1X is a port-based Network Access Control (PNAC) protocol that:
Provides authentication at the edge of the LAN (such as a wireless access point or switch port).
Encapsulates EAP messages over the LAN using the EAPoL (EAP over LAN) protocol.
This standard defines how devices are granted or denied access based on authentication status.
Incorrect:
B). Key management is part of 802.11i (not 802.1X directly).
C). VLAN assignment may occur, but it's not limited to authenticated-user VLANs.
D). AES-CCMP is a function of WPA2/802.11i, not 802.1X.
E). Only EAP is allowed over the uncontrolled port; DHCP/DNS pass only after authentication.

NEW QUESTION # 70

You work as the security administrator for your organization. In relation to the WLAN, you are viewing a dashboard that shows security threat, policy compliance and rogue threat charts. What type of system is in view?

- A. Wireshark Protocol Analyzer
- B. WLAN Emulation System
- C. Wireless VPN Management Systems
- D. Distributed RF Spectrum Analyzer
- E. Wireless Intrusion Prevention System

Answer: E

Explanation:
A WIPS (Wireless Intrusion Prevention System) is designed to monitor WLAN activity and provide visualization and reporting related to:
Security threats (e.g., DoS attacks, rogue devices)
Policy compliance (e.g., allowed SSIDs, encryption types)
Rogue threat classification (e.g., rogue, neighbor, ad hoc)
The dashboard displaying this type of security-centric overview is characteristic of a WIPS platform.

NEW QUESTION # 71

In the IEEE 802.11-2012 standard, what is the purpose of the 802.1X Uncontrolled Port?

- A. To pass general data traffic after the completion of 802.11 authentication and key management
- B. To block authentication traffic until the 4-Way Handshake completes
- C. To block unencrypted user traffic after a 4-Way Handshake completes
- D. To allow only authentication frames to flow between the Supplicant and Authentication Server

Answer: D

Explanation:
The 802.1X Uncontrolled Port exists before a client is fully authenticated. It:
Permits only EAP/EAPoL frames to pass between the Supplicant and the Authenticator (AP or switch).
Blocks general data traffic until authentication completes.
After authentication, the Controlled Port is opened, allowing normal data flow.
Incorrect:
B). Authentication must complete before the 4-Way Handshake, not the other way around.
C). General data traffic uses the Controlled Port, not the Uncontrolled Port.
D). The Uncontrolled Port doesn't specifically deal with encrypted or decrypted user traffic.
