

Free PDF Quiz USGBC - LEED-Green-Associate - Latest Instant LEED Green Associate Exam Download

P.S. Free 2026 USGBC LEED-Green-Associate dumps are available on Google Drive shared by itPass4sure:
https://drive.google.com/open?id=1pnVp_BBCCDnmOp7ovoQjT6hzvyhVLNu9

If you have interests with our LEED-Green-Associate practice materials, we prefer to tell that we have contacted with many former buyers of our LEED-Green-Associate exam questions and they all talked about the importance of effective LEED-Green-Associate practice material playing a crucial role in your preparation process. Our LEED-Green-Associate practice materials keep exam candidates motivated and efficient with useful content based wholly on the real LEED-Green-Associate guide materials. There are totally three versions of LEED-Green-Associate practice materials which are the most suitable versions for you: pdf, software and app versions.

USGBC LEED-Green-Associate Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Indoor Environmental Quality: This section of the exam measures the skills of indoor air quality specialists and covers strategies for improving indoor air quality, lighting, acoustics, and occupant comfort. It emphasizes the use of low-emitting materials and green cleaning practices.
Topic 2	<ul style="list-style-type: none">Location and Transportation: This section of the exam measures the skills of urban planners and covers site selection criteria and alternative transportation strategies. It emphasizes choosing sites that minimize environmental impact and promote sustainable transportation options.

Topic 3	<ul style="list-style-type: none"> • Water Efficiency: This section of the exam measures the skills of water conservation specialists and covers strategies for reducing water usage both indoors and outdoors. It includes the use of gray water and rainwater in irrigation and the implementation of low-flow fixtures.
Topic 4	<ul style="list-style-type: none"> • Materials and Resources: This section of the exam measures the skills of sustainable materials specialists and focuses on reuse, life-cycle impacts, waste management, and environmentally preferable purchasing practices. It highlights the importance of material selection in reducing environmental impacts.
Topic 5	<ul style="list-style-type: none"> • Project Surroundings and Public Outreach: This section of the exam measures the skills of community engagement specialists and covers the environmental impacts of buildings, green building codes, and the values of sustainable design. It also includes regional design considerations and public outreach strategies.
Topic 6	<ul style="list-style-type: none"> • Integrative Strategies: This section of the exam measures the skills of project managers and focuses on the integrative process in LEED projects. It includes understanding the roles of various team members and standards that support LEED, such as ASHRAE and ENERGY STAR guidelines. This section highlights the importance of collaboration and systems thinking in achieving sustainable design.
Topic 7	<ul style="list-style-type: none"> • LEED Process: This section of the exam measures the skills of sustainability consultants and covers the foundational aspects of LEED, including organization fundamentals, the structure of LEED rating systems, and the LEED certification process. It emphasizes understanding the goals and objectives of each credit category and how they contribute to sustainable building practices.
Topic 8	<ul style="list-style-type: none"> • Sustainable Sites: This section of the exam measures the skills of landscape architects and focuses on on-site assessment and design strategies that reduce environmental impact. It includes topics like habitat conservation, rainwater management, and exterior lighting.

Quiz USGBC - LEED-Green-Associate –Newest Instant Download

Pass rate is 98.45% for LEED-Green-Associate learning materials, which helps us gain plenty of customers. You can pass the exam and obtain the certification successfully if you choose us. LEED-Green-Associate exam braindumps contain both questions and answers, and it's convenient for you to check the answers after practicing. You can try free demo before buying LEED-Green-Associate Exam Materials, so that you can know what the complete version is like. We provide you with free update for 365 days after purchasing, and the update version for LEED-Green-Associate exam dumps will be sent to you automatically. You just need to check your email and change your learning ways according to new changes.

USGBC LEED Green Associate Exam Sample Questions (Q276-Q281):

NEW QUESTION # 276

Which Is a component of a construction waste management plan?

- A. Distance of the recycling facility from the project site
- B. Projected cost savings from diverting waste
- C. Quantity of waste generated from excavated soil
- **D. List of materials to be diverted from disposal**

Answer: D

Explanation:

A list of materials to be diverted from disposal is a component of a construction waste management plan. A construction waste management plan is a document that outlines the goals, procedures, and responsibilities for diverting construction and demolition waste from landfills or incinerators. A list of materials to be diverted from disposal identifies the types and quantities of materials that can be recycled, reused, salvaged, or donated, as well as the destinations and methods for diversion. The other options are not components of a construction waste management plan. Projected cost savings from diverting waste is a potential benefit of implementing a construction waste management plan, but it is not a required component. Quantity of waste generated from excavated soil is a factor that affects the construction waste generation rate, but it is not a component of a construction waste

management plan. Distance of the recycling facility from the project site is a factor that affects the transportation emissions and costs associated with diverting waste, but it is not a component of a construction waste management plan. Reference: LEED Green Associate Candidate Handbook, page 28; USGBC, [Materials and Resources], page 3.

NEW QUESTION # 277

Which label or certification indicates reduced water consumption for appliances?

- A. ASHRAE 90.1
- B. GREENGUARD
- C. ISO 14001:2015
- **D. ENERGY STAR**

Answer: D

Explanation:

ENERGY STAR is a program run by the U.S. Environmental Protection Agency (EPA) and U.S. Department of Energy that promotes energy efficiency. Products that earn the ENERGY STAR label meet strict criteria for energy efficiency and often for water efficiency as well, helping consumers save money on utility bills and protect the environment through energy-efficient products and practices. References: LEED Green Associate Candidate Handbook, U.S. Green Building Council resources

NEW QUESTION # 278

What does the U.S. Green Building Council (USGBC) administer?

- A. LEED Project Certification through third-party certification bodies accredited by the American National Standards Institute (ANSI)
- **B. LEED Credentialing programs related to Green Building practice**
- C. LEED rating systems development
- D. LEED Green Associate exams

Answer: B

Explanation:

The USGBC administers the LEED credentialing programs, which include the LEED Green Associate and the LEED AP with specialty credentials. The USGBC does not administer the LEED exams, the LEED rating systems development, or the LEED project certification.

The LEED Green Associate Candidate Handbook states that "The U.S. Green Building Council (USGBC) administers the LEED credentialing programs related to green building practice" 1, page 3.

The same handbook also states that "The Green Business Certification Inc. (GBCI) administers the LEED professional credential exams" 1, page 3.

The LEED AP with Specialty Candidate Handbook states that "The U.S. Green Building Council (USGBC) is responsible for the development of the LEED rating systems" 2, page 3.

The same handbook also states that "The Green Business Certification Inc. (GBCI) administers project certification for all commercial and institutional projects pursuing LEED certification under any of the current rating systems" 2, page 3.

NEW QUESTION # 279

A project team pursues LEED certification for an air-tight commercial building located in the tropics. Which combination of credits represents a trade-off for this scenario?

- **A. Energy Optimization and Enhanced Indoor Air Quality Strategies**
- B. Demand Response and Indoor Air Quality Assessment
- C. Advanced Energy Metering and Construction Indoor Air Quality Management Plan
- D. Heat Island Reduction and Thermal Comfort

Answer: A

Explanation:

Tightly sealed (air-tight) buildings are often highly energy-efficient, particularly important in hot, humid climates like the tropics, where air conditioning demand is high. However, these airtight designs can limit fresh air exchange and potentially reduce indoor air quality

(IAQ) unless carefully managed.

This sets up a trade-off scenario:

* EA Credit: Optimize Energy Performance encourages tightly controlled environments to reduce energy consumption (especially from HVAC systems).

* IEQ Credit: Enhanced Indoor Air Quality Strategies promotes fresh air circulation, filtration, and contaminant control to maintain health and comfort.

From LEED v4 BD+C Reference:

"Achieving high energy efficiency through airtightness must be balanced with adequate ventilation and IAQ strategies to ensure occupant health and comfort." Therefore:

* Option B is correct, representing this trade-off.

* Option A (metering and construction IAQ) doesn't reflect the trade-off in building operation.

* Option C includes demand response, which is about energy grid participation, not IAQ.

* Option D (heat island and thermal comfort) relates to exterior design and comfort, not air-tightness vs IAQ.

NEW QUESTION # 280

A nine-story residential building includes 60% of the gross floor area within the project scope, Which rating system is the most appropriate for the LEED certification of this project?

- A. LEED AP Building Design and Construction: Core and Shell Development
- **B. LEED AP Building Design and Construction: Multifamily Midrise**
- C. LEED AP Building Design and Construction: Homes and Multifamily Low-rise
- D. LEED AP Building Design and Construction: New Construction and Major Renovation

Answer: B

Explanation:

Explanation

LEED BD+C: Multifamily Midrise is the appropriate rating system for residential buildings that are four to eight stories above grade¹. Since the project scope includes 60% of the gross floor area, it meets the minimum program requirement of having at least 40% of the gross floor area certified². The other rating systems are not suitable for this project because they either apply to different building types or heights²³.

NEW QUESTION # 281

.....

Only 20-30 hours on our LEED-Green-Associate learning guide are needed for the client to prepare for the test and it saves our client's time and energy. Most people may wish to use the shortest time to prepare for the LEED-Green-Associate test and then pass the test with our LEED-Green-Associate Study Materials successfully because they have to spend their most time and energy on their jobs, learning, family lives and other important things. And our LEED-Green-Associate exam braindumps won't let you down!
