If you buy our NCP-MCA exam questions and answers, you can get the right of free update exam pdf one-year. And you can try the free demo of our braindumps before you decide to buy. You will pass NCP-MCA Exam Tests with the help of our latest learning materials and top questions.

Will you feel nervous when you are in the exam, and if you do, you can try our exam dumps.NCP-MCA Soft test engine can stimulate the real environment, through this , you can know the procedure of the real exam, so that you can release your nervous . And you can build up your confidence when you face the real exam. Besides, NCP-MCA Exam Dumps of us offer you free update for one year after purchasing, and our system will send the latest version to you automatically. We have online and offline chat service stuff, and if you have any questions, just have chat with them.

100% Pass Newest Nutanix - NCP-MCA - Exam Nutanix Certified Professional - Multicloud Automation (NCP-MCA 6.10) Preparation

Therefore, you have the option to use Nutanix NCP-MCA PDF questions anywhere and anytime. NCP-MCA dumps are designed according to the Nutanix Certified Professional - Multicloud Automation (NCP-MCA 6.10) (NCP-MCA) certification exam standard and have hundreds of questions similar to the actual NCP-MCA Exam. Prep4SureReview Nutanix Certified Professional - Multicloud Automation (NCP-MCA 6.10) (NCP-MCA) web-based practice exam software also works without installation.

The benefits of obtaining the Nutanix NCP-MCA Certification are numerous. Firstly, this certification demonstrates an individual's expertise in automating and managing multicloud environments, which is a highly sought-after skill in today's job market. Secondly, this certification validates an individual's knowledge and skills in using Nutanix's cloud management platform, which is becoming increasingly popular in the industry.

Nutanix Certified Professional - Multicloud Automation (NCP-MCA 6.10) Sample Questions (Q49-Q54):

NEW QUESTION # 49
An administrator is unable to launch a Calm blueprint (new and old). Launching an existing blueprint under this condition fails with the error message:
The project for this blueprint does not have any associated Nutanix account.
Downloading and uploading the new blueprint also fails with
Launch with Variables' Profile expected to fall as Windows Server VWs attached with deleted Account.
Please modify them to use different account and try again.
Why is the administrator seeing this issue?

- A. The account been deleted.

- B. The account is in a failed state.
- C. The account is not verified.
- D. The has not been created.

Answer: A

Explanation:
The error messages indicate that the blueprint is trying to use a Nutanix account that no longer exists. This could happen if the account was deleted by another administrator or by a playbook action. The administrator should check the project settings and verify that the Nutanix account is still available and associated with the project. If not, the administrator should create a new account or use an existing one and update the blueprint accordingly. References: Nutanix Certified Professional - Multicloud Automation (NCP-MCA) 6.5 Exam Blueprint Guide, page 9; Nutanix Certified Professional - Multicloud Automation (NCP-MCA), section 3; Nutanix NCP-MCA Certification Exam Sample Questions, question 80.

NEW QUESTION # 50
Refer to the exhibit.

Calm showback is not able to reach beam service

A customer has decided to enable Calm Showback feature but started to receive an alert in Prism Central stating that Calm showback is not able to reach beam service.
Which two configuration items should the administrator check to ensure Calm can communicate with Beam? (Choose two.)

- A. Ensure Pulse is enabled
- B. Flow is enabled in the same Prism Central

- C. DNS configuration in Prism Central
- D. Prism Element is configured with Proxy settings

Answer: A,C

NEW QUESTION # 51
What does the Playbook Alert Trigger do?

- A. Selects an alert which, if generated, will start the Playbook
- B. Generates a Playbook alert at a specified time interval
- C. Inform the administrator if an instance of a Playbook has failed
- D. Alerts the administrator if a Playbook is triggered

Answer: A

Explanation:
Comprehensive and Detailed Explanation
Nutanix Playbooks can start based on an Alert Trigger, which is defined as:
* A specific Prism Central alert that, when generated, automatically starts the Playbook.
* Alert Triggers map directly to an alert definition that Calm will monitor.
Thus, the Alert Trigger does not generate alerts or notify admins by itself-it waits for a selected alert and launches the Playbook when that alert fires.
Correct answer:D

NEW QUESTION # 52
An administrator had provided Linux VM console access to the OS Team. However, the team is unable to access one of the newly-created Linux VMS within Prism Central.
How can the administrator resolve this issue?

- A. Create and assign the Linux OS Category to the OS Team Active Directory Group,
- B. Create a local user in Linux OS and provide access to the OS Team.
- C. Create and assign the Linux OS Category to the newly-created VM,
- D. Create a role for the OS Team Active Directory Group and add the VMS to it.

Answer: C

Explanation:
Categories are a way of organizing and managing resources in Nutanix Calm. Categories can be used to define access policies, filter resources, and group applications. By creating and assigning the Linux OS Category to the newly-created VM, the administrator can grant access to the OS Team based on their Active Directory Group membership. The OS Team can then use the web SSH console to access the Linux VM from the Calm UI.

Nutanix Support & Insights, section "Accessing the Web SSH Console"

NEW QUESTION # 53
Refer to the exhibit.

A Blueprint fails on executing a check-login task against a Windows 2016 VM and displays the error shown in the exhibit. The administrator is using a SSH key-based credential to authenticate the task.
What should the administrator change to resolve the issue?

- A. Ensure the private key for the credential is correct.
- B. Increase the retries to allow for the task to complete.
- C. Modify the timeout to give the task longer to complete.
- D. Change to password authentication credential.

Answer: A

Explanation:
The error message "Authentication by <Credential_type> failed" typically indicates an issue with the authentication credentials being used. Since the administrator is using SSH key-based credential to authenticate, it's essential to ensure that the private key associated with this credential is correct and accessible. If there's an issue with the private key, such as it being incorrect or inaccessible, authentication will fail. Increasing the retries or modifying the timeout will not help if the credential is invalid. Changing to password authentication credential may work, but it's not the best option as it may compromise security and require additional configuration. Reference:
