Salesforce Certified Platform Development Lifecycle and Deployment Architect Sample Questions (Q120-Q125):

NEW QUESTION # 120
As a part of technical debt cleanup project, a large list of metadata components has been identified by the business analysts at Universal Containers for removal from the Salesforce org. How should an Architect manage these deletions across sandbox environments and production with minimal impact on other work streams?

- A. Assign business analysts to perform the deletes and split up the work between them
- B. Perform deletes manually in a sandbox and then deploy a Change Set to production
- C. Delete the components in production and then refresh all sandboxes to receive the changes
- D. Generate a destructivechanges.xml file and deploy the package via the Force.com Migration Tool

Answer: D

NEW QUESTION # 121

Universal Containers uses multiple Salesforce orgs for its different lines of business (LOBs). In a recent analysis, the architect found that UC could have a more complete view of its customers by gathering customer data from different orgs.

What two options can an architect recommend to accomplish the customer 360-degree view?

Choose 2 answers

- A. Implement a Single Package multi-org strategy by developing and deploying to all orgs a managed package which reads and consolidates
- B. Implement a Complete Graph multi-org strategy by allowing each org to connect directly to every other, reading and writing customer data
- C. Migrate from multi-org to single-org strategy, consolidating customer data in the process.
- D. Implement a Hub-and-Spoke multi-org strategy by consolidating customer data In a single org, which will be the master of customer data,

Answer: A,D

NEW QUESTION # 122

Universal Containers is working on the next phase of development for their Salesforce implementation involving a large amount of custom development. Which two strategies should be considered to address a critical production issue occurring in the middle of development? Choose 2 answers

- A. Create separate branches for current development and production bug fixes and deploy the fix with current development when ready
- B. Utilize a source control system to allow separate branches for current development and production bug fixes
- C. Refresh a sandbox for replication of the issue and testing the use -case scenarios once the code is fixed
- D. Utilize one branch for both development and production bug fixes to avoid out-of-sync branches and simplify deployment

Answer: B,C

NEW QUESTION # 123

By to What three tools should an architect recommend to support application lifecycle methodology Choose 3 answers

- A. Issue tracking Ttool
- B. Continuous integration tool
- C. Database management systems
- D. Version control repository
- E. Middleware

Answer: B,D

NEW QUESTION # 124

Universal Containers (UC) have developed a managed package targeted for AppExchange. The product includes some Apex code to customize and create layouts. UC is in the testing phase of the package, so it's not certified yet. During testing on the target org, the Apex code for the layouts fails.

Why are the Apex classes not able to access the metadata of the target org during testing?

- A. The solution is flawed. UC should utilize the Tooling API from a web service call to modify the layouts.
- B. UC needs to turn on Apex Settings within the custom metadata type.
- C. Apex Settings to allow the access to metadata is not switched on.
- D. UC needs to get the managed package certified by the Salesforce security review.

Answer: C

NEW QUESTION # 125
