D-PWF-OE-00 German, D-PWF-OE-00 Deutsch

Die Feedbacks von den IT-Fachleuten, die EMC D-PWF-OE-00 Zertifizierungsprüfung erfolgreich bestanden haben, haben bewiesen, dass ihren Erfolg EchteFrage beizumessen ist. Die Fragen und Antworten zur EMC D-PWF-OE-00 Zertifizierungsprüfung haben ihnen sehr geholfen. Dabei erspart EchteFrage ihnen auch viele wertvolle Zeit und Energie. Sie haben die EMC D-PWF-OE-00 Zertifizierungsprüfung ganz mühelos beim ersten Versuch bestanden. So ist EchteFrage eine zuverlässige Website. Wenn Sie EchteFrage wählen, sind Sie der nächste erfolgreiche IT-Fachmann. EchteFrage würde Ihren Traum verwirklichen.

EMC D-PWF-OE-00 Prüfungsplan:

Thema	Einzelheiten
Thema 1	Protecting PowerFlex Storage: This section covers data protection through snapshot technology for point-in-time copies and volume replication between clusters for disaster recovery.
Thema 2	PowerFlex Components and Resource Discovery: This domain covers identifying PowerFlex hardware models and software components, using management interfaces to interact with the system, and completing essential post-installation configuration tasks.
Thema 3	PowerFlex Storage: This domain addresses daily storage operations including creating and managing volumes, configuring shared file systems, and working with storage data targets.

Thema 4	• PowerFlex Security: This section addresses security administration through managing user accounts and access privileges, integrating CloudLink for encryption, and configuring system alerting.
Thema 5	• Expanding a PowerFlex Cluster: This domain focuses on cluster expansion and maintenance including using maintenance modes, adding nodes, configuring Storage Data Servers and Meta Data Managers, and understanding PowerFlex integration with APEX.
Thema 6	• PowerFlex Upgrades: This domain covers understanding upgrade procedures and executing cluster upgrades to newer software versions.

EMC Dell PowerFlex Operate Exam D-PWF-OE-00 Prüfungsfragen mit Lösungen (Q22-Q27):

22. Frage

Which actions can administrators perform to enhance alerting capabilities in PowerFlex? (Choose two).

- A. Assign alert thresholds for critical events
- B. Schedule alert retention policies
- C. Configure SNMP trap destinations
- D. Enable encryption for alert traffic

Antwort: A,C

Begründung:

* Configure SNMP trap destinations (Option A): This is the standard method for "enhancing" alerting beyond the local dashboard. By directing SNMP traps to an enterprise monitoring system (like SolarWinds, Nagios, or OpenManage), administrators ensure alerts are centralized and ticketed automatically.

* Assign alert thresholds for critical events (Option C): PowerFlex allows administrators to customize specific thresholds (e.g., "Alert if Storage Pool usage > 85%" or "Alert if Latency > 10ms").

Configuring these thresholds ensures that the alerting system is proactive and tailored to the specific workload needs, rather than relying solely on default "System Down" alerts.

23. Frage

Enabling Maintenance Mode on a node allows it to be removed from the cluster without impacting data availability. True. False.

- A. False
- B. True

Antwort: B

Begründung:

* True: The specific purpose of Protected Maintenance Mode (PMM) is to ensure data availability.

* How it works: When you enable PMM on a node, the system checks the data chunks residing on that node. Before the node is allowed to effectively "leave" the cluster (stop serving I/O), PowerFlex copies (mirrors) that data to other nodes in the cluster. This ensures that even when the node is physically removed or rebooted, the cluster retains the required number of data copies (redundancy), ensuring no data is unavailable (DU) or lost (DL).

24. Frage

Which tasks are automated when configuring snapshots in PowerFlex? (Choose two).

- A. Automating snapshot replication
- B. Assigning snapshots to fault sets
- C. Scheduling snapshot creation
- D. Managing snapshot retention policies

Antwort: C,D

Begründung:

These tasks are handled by the Snapshot Policy feature in PowerFlex.

* Scheduling snapshot creation (Option A): Administrators can define a policy (e.g., "Gold Policy") that triggers a snapshot every 15 minutes. Once applied to a volume, the system automates this trigger.

* Managing snapshot retention policies (Option C): The policy also dictates the lifecycle of the snapshot. For example, "Keep 10 hourly snapshots and 5 daily snapshots." As new snapshots are created, the system automatically deletes the oldest ones to free up space and maintain the defined retention count.

Incorrect Options:

* Assigning to Fault Sets (B): Snapshots reside in the same Storage Pool as the source volume; they are not assigned to Fault Sets.

* Automating replication (D): While replication uses snapshots, the Snapshot Policy feature itself is distinct from the Replication Consistency Group configuration.

25. Frage

Which actions ensure secure alert configurations in PowerFlex? (Choose two).

- A. Assign alerts to metadata managers
- B. Enable role-based access control for alerts
- C. Validate SNMP trap destinations
- D. Configure email notifications for critical events

Antwort: C,D

Begründung:

Configuring alerts ensures that administrators are notified of security or health issues promptly.

* Validate SNMP trap destinations (Option A): PowerFlex can send SNMP traps to a central monitoring station (like Nagios, SolarWinds, or Secureworks). Validating these destinations ensures that sensitive alert data is being sent to authorized, secure servers and not leaked to unauthorized IPs.

* Configure email notifications for critical events (Option B): Configuring an SMTP gateway allows PowerFlex to email administrators immediately when a "Critical" or "Error" event occurs (e.g., "Drive Failed" or "Login Failed"). Ensuring this channel is encrypted (TLS) and directed to the correct distribution lists is part of a secure configuration.

26. Frage

Shared file systems in PowerFlex allow data sharing across multiple nodes. True or False?

- A. False
- B. True

Antwort: B

Begründung:

This refers to PowerFlex File (formerly PowerFlex NAS).

While the core PowerFlex product is a block storage solution (providing raw LUNs/Volumes which cannot be safely shared by two standard OS hosts without a cluster file system like VMFS or OCFS2), PowerFlex File introduces NAS nodes. These nodes format the block storage and present it via NFS or SMB protocols. These protocols are specifically designed to allow multiple clients to read and write to the same file system concurrently, enabling true data sharing across the network.

27. Frage
