

Pass Guaranteed Quiz 2026 Authoritative USAII CAIC: Exam Certified Artificial Intelligence Consultant Revision Plan

Our supporter of CAIC study guide has exceeded tens of thousands around the world, which directly reflects the quality of them. Because the exam may put a heavy burden on your shoulder while our CAIC practice materials can relieve you of those troubles with time passing by. Just spent some time regularly on our CAIC Exam simulation, your possibility of getting it will be improved greatly. For your information, the passing rate of our CAIC training engine is over 98% up to now.

USAII CAIC Exam Overview:

Certification Vendor:	United States Artificial Intelligence Institute (USAII)
Exam Name:	USAII Certified Artificial Intelligence Consultant Exam
Exam Number:	CAIC
Exam Format:	Multiple Choice Questions, Scenario-based Questions
Related Certifications:	Certified Artificial Intelligence Scientist (CAIS) Certified Artificial Intelligence Engineer (CAIE) Certified AI Transformation Leader (CAITL)
Available Languages:	English
Certificate Validity Period:	Not officially specified
Real Exam Qty:	Not officially published
Exam Price:	US\$894 (program fee including exam preparation and certification bundle)
Passing Score:	70%
Recommended Training:	USAII CAIC Program Overview
Exam Registration:	USAII Official Certification Page
Sample Questions:	USAII CAIC Sample Questions
Exam Way:	Online self-paced, AI-proctored certification exam (based on USAII certification delivery model)
Pre Condition:	No formal prerequisites required; programming knowledge is recommended but not mandatory.
Official Syllabus URL:	https://www.usaii.org/artificial-intelligence-certifications/certified-artificial-intelligence-consultant

Exam CAIC Revision Plan Marvelous Questions Pool Only at PassCollection

The customer is God. CAIC learning dumps provide all customers with high quality after-sales service. After your payment is successful, we will dispatch a dedicated IT staff to provide online remote assistance for you to solve problems in the process of

download and installation. During your studies, CAIC study tool will provide you with efficient 24-hour online services. You can email us anytime, anywhere to ask any questions you have about our CAIC Study Tool. At the same time, CAIC test question will also generate a report based on your practice performance to make you aware of the deficiencies in your learning process and help you develop a follow-up study plan so that you can use the limited energy where you need it most. So with CAIC study tool you can easily pass the exam.

USAII CAIC Exam Syllabus Topics:

Topic	Details
Topic 1	• Solution Architecture: From Concept to Implementation: Guides the design and deployment of end-to-end AI solutions, from problem framing and model selection to integration and scaling.
Topic 2	• The Economics of Data and AI: Examines the business value, cost considerations, ROI measurement, and economic models surrounding data assets and AI investments.
Topic 3	• NLP for Business: Transforming Data into Decisions: Covers natural language processing tools and techniques used to extract meaning from text and speech data for business decision-making.
Topic 4	• AI Across Industries and Domains: Examines real-world AI applications and use cases across sectors such as healthcare, finance, retail, and manufacturing.
Topic 5	• ML for Transforming Operations and Strategy: Explores how machine learning techniques can be applied to optimize business operations, automate processes, and drive competitive strategy.
Topic 6	• Responsible AI: Ethics, Fairness, and Regulation: Addresses ethical principles, bias mitigation, transparency, and compliance frameworks governing the responsible deployment of AI systems.

USAII Certified Artificial Intelligence Consultant Sample Questions (Q36-Q41):

NEW QUESTION # 36

Which of the following is NOT a learning category for the ML model?

- A. Reinforcement learning
- B. Supervised learning
- C. Unsupervised learning
- D. Semi-supervised learning
- E. Semi Reinforcement learning

Answer: E

Explanation:

The correct answer is D. Semi Reinforcement learning because it is not commonly recognized as a standard learning category for machine learning models. The major machine learning categories include supervised learning, unsupervised learning, reinforcement learning, and semi-supervised learning. Supervised learning uses labeled datasets where the model learns from known input-output examples. Unsupervised learning uses unlabeled data to discover patterns, clusters, or hidden structures. Reinforcement learning trains an agent through interaction with an environment using rewards and penalties. Semi-supervised learning combines a small amount of labeled data with a larger amount of unlabeled data to improve learning when fully labeled datasets are limited. "Semi Reinforcement learning" is not normally listed as a core ML learning category in standard AI and machine learning learning paths. Therefore, among the given options, the one that is NOT a learning category for the ML model is D. Semi Reinforcement learning.

NEW QUESTION # 37

Choose the CORRECT statement for SOFT Launch.

- A. The goal of a soft launch is to gauge customer reactions and measure customer acquisition costs CACs.

- B. A soft launch is to select a group of people who have been handpicked by the company.
- C. A soft launch is a controlled and limited release of your new product or service.
- D. a and b only
- E. a, b and c only

Answer: E

Explanation:

The correct answer is E. a, b and c only because all three statements correctly describe a soft launch. A soft launch is a limited and controlled release of a new product, service, platform, or feature before a full public launch. Organizations use it to test the product in a real or semi-real market environment while reducing risk and maintaining control over the launch process.

Statement A is correct because a soft launch is not a large-scale public release; it is usually restricted to a smaller audience, region, user group, or market segment. Statement B is also correct because companies may handpick early users, beta testers, internal customers, loyal customers, or selected market participants to try the product first. Statement C is correct because a soft launch helps the company observe customer reactions, collect feedback, identify defects, test adoption, validate messaging, and estimate customer acquisition costs.

Since A, B, and C are all accurate, the best answer is E. a, b and c only .

NEW QUESTION # 38

Choose the BEST key components of workflow automation.

- A. Model monitoring configuration
- B. Pipeline design and management
- C. a, b, and c only
- D. a and b only
- E. Pipeline execution and monitoring

Answer: C

Explanation:

Workflow automation in an AI or machine learning environment involves designing, running, tracking, and maintaining automated processes across the model lifecycle. Pipeline design and management is a key component because AI workflows often require structured pipelines for data ingestion, preprocessing, model training, validation, deployment, and updates. Pipeline execution and monitoring is also essential because automated workflows must be executed reliably, and teams need visibility into job status, failures, performance issues, and operational bottlenecks.

Model monitoring configuration is also a necessary component in AI workflow automation because deployed models must be observed for performance degradation, data drift, prediction quality, and operational reliability. Without monitoring, an automated AI workflow may continue producing poor or outdated results without detection. Since all three options support the implementation, operation, and governance of automated AI pipelines, the best and most complete answer is E. a, b, and c only .

NEW QUESTION # 39

Which of the following is NOT a common supervised learning model/algorithm?

- A. Decision trees
- B. Random forest
- C. All of the above
- D. None of the above
- E. K-nearest neighbors KNNs

Answer: D

Explanation:

The correct answer is E. None of the above because K-nearest neighbors, random forest, and decision trees are all common supervised learning models or algorithms. Supervised learning uses labeled data to train a model so it can predict an output label or target value for new data.

K-nearest neighbors is a supervised learning algorithm commonly used for classification and regression. It predicts outcomes by comparing a new data point with the most similar labeled examples in the training data.

Random forest is also a supervised learning algorithm. It builds multiple decision trees and combines their results to improve prediction accuracy and reduce overfitting. Decision trees are supervised models that split data based on feature values to make

classification or regression predictions.

Since options A, B, and C are all valid supervised learning algorithms, none of them is the correct example of a model that is NOT commonly supervised. Therefore, the correct answer is E. None of the above .

NEW QUESTION # 40

Choose the CORRECT statement for GenAI.

- A. None of the above
- **B. All of the above**
- C. GenAI focuses on creating intelligent systems that possess human-like cognitive abilities and can perform a wide range of tasks across multiple domains.
- D. GenAI architects focus on building systems that can learn from limited data, transfer knowledge across domains, and exhibit robust performance in dynamic and unpredictable environments.
- E. GenAI architects are responsible for designing and developing advanced AI systems that go beyond specific use cases and can exhibit general intelligence.

Answer: B

Explanation:

The correct answer is E. All of the above because all three statements describe the broader idea of general intelligence in AI systems. GenAI in this question is presented as intelligence that goes beyond narrow, task- specific AI and aims to support broader reasoning, learning, adaptation, and performance across multiple domains.

Statement A is correct because general AI focuses on systems that can demonstrate human-like cognitive abilities and perform different kinds of tasks rather than being limited to one predefined function. Statement B is also correct because architects working on such advanced AI systems must design solutions that go beyond specific use cases and support more general intelligence capabilities. Statement C is correct because general AI systems are expected to learn from limited data, transfer knowledge across domains, adapt to changing environments, and perform reliably in uncertain situations.

Since A, B, and C are all correct, the best answer is E. All of the above .
