NEW QUESTION # 69
Refer to the exhibit.
You have deployed a Linux EC2 instance in Amazon Web Services (AWS) with the settings shown on the exhibit.
What next step must the administrator take to access this instance from the internet?

- A. Enable SSH and allocate it to the device.
- B. Create a VIP on FortiGate to allow access.
- C. Allocate an Elastic IP address and assign it to the instance.
- D. Configure the user name and password.

Answer: C

NEW QUESTION # 70

In an SD-WAN TGW Connect topology, which three initial steps are mandatory when routing traffic from a spoke VPC to a security VPC through a Transit Gateway? (Choose three.)

- A. From the spoke VPC internal routing table, point 0.0.0.0/0 traffic to the TGW.
- B. From both spoke VPCs, and the security VPC, point 0.0.0.0/0 traffic to the Internet Gateway.
- C. From the security VPC FortiGate internal subnet routing table, point 0.0.0.0/0 traffic to the TGW.
- D. From the security VPC TGW subnet routing table, point 0.0.0.0/0 traffic to the TGW.
- E. From the security VPC TGW subnet routing table, point 0.0.0.0/0 traffic to the FortiGate internal port.

Answer: A,C,E

Explanation:
Comprehensive and Detailed Explanation From FortiOS 7.6, FortiWeb 7.4 Exact Extract study guide:
In an AWS SD-WAN Transit Gateway (TGW) Connect topology, traffic flow must be meticulously orchestrated through VPC route tables to ensure that the FortiGate-VM (Security VPC) can inspect traffic transitioning between spokes.
* Spoke to TGW Redirection (Option E):For traffic to leave a Spoke VPC and reach the inspection hub, theSpoke VPC internal routing tablemust be configured to send all non-local traffic (0.0.0.0/0) to theTransit Gateway (TGW). This is the first step in the traffic chain.
* TGW to FortiGate Redirection (Option A):Once the traffic arrives at the TGW and is forwarded to the Security VPC via a TGW attachment, it lands in theTGW subnet(or attachment subnet). To ensure this traffic is inspected, theSecurity VPC TGW subnet routing tablemust point the default route (
0.0.0.0/0) to theFortiGate's internal network interface (ENI).
* FortiGate Return/Egress Path (Option D):After the FortiGate processes the packet, it must be sent back to the TGW to reach its final destination in a different spoke or to exit via a different gateway.
Therefore, theSecurity VPC FortiGate internal subnet routing table(the subnet where the FortiGate's internal leg resides) must have a default route (0.0.0.0/0) pointing back to theTGW.
Why other options are incorrect:
* Option B:If the Security VPC TGW subnet routing table points to the TGW as the next hop, it creates a routing loop where traffic arrives from the TGW and is immediately sent back without being inspected by the FortiGate.
* Option C:Pointing all traffic to an Internet Gateway (IGW) would bypass the Transit Gateway entirely and send traffic to the public internet rather than through the internal security fabric.

NEW QUESTION # 71

Refer to the exhibit. You are managing an active-passive FortiGate HA cluster in AWS that was deployed using CloudFormation. You have created a change set to examine the effects of some proposed changes to the current infrastructure. The exhibit shows some sections of the change set.

                    :
                    :
            "ResourceChange": {
                    "ResourceType": "AWS::EC2::Instance",

                    "PhysicalResourceId": "i0559e20adr1b3ba3",
                    "Action": "Modify",
                    "Replacement": "False",
```
