Salesforce AP-202 Fragen und Antworten, B2B Commerce for Developers Accredited Professional Prüfungsfragen

Aus der Perspektive der Prüfung ist es notwendig, Ihnen die Prüfungstechnik zu lehren. Sie sollen weise wählen und keine Chance verpassen. ZertPruefung ist eine großartige Website, die gute Schulungsressourcen bietet, die Prüfungs- und Untersuchungsmaterialien und ausführliche Fragen und Antworten enthalten. Die Prüfungswebsites nehmen in den letzten Jahren rasch zu. Das ist vielleicht der Grund, wieso Sie so verwirrt gegenüber der Salesforce AP-202 Zertifizierungsprüfung sind. Die Schulungsunterlagen zur Salesforce AP-202 Zertifizierungsprüfung von ZertPruefung werden von einigen Fachleuten und vielen Kandidaten bewiesen, dass sie effizient sind. Sie können Ihnen helfen, die Salesforce AP-202 Zertifizierungsprüfung zu bestehen.

Salesforce B2B Commerce for Developers Accredited Professional AP-202 Prüfungsfragen mit Lösungen (Q119-Q124):

119. Frage

Universal Containers (UC) needs to wrap a Lightning Web Component they have created called "lwcContainerComponent" inside an Aura component. Which set of tags is the correct approach?

- A. ☐
- B. ☐
- C. ☒

- D. □

Antwort: C

Begründung:

To wrap a Lightning Web Component inside an Aura component, you need to use the `<c:lwcContainerComponent>` tag, where `c` is the default namespace for custom components. This tag allows you to reference the Lightning Web Component by its name and use it as a child component of the Aura component. You also need to use the `lwc:dom="manual"` directive on the Aura component to indicate that you are manually rendering the Lightning Web Component inside the Aura component. This directive prevents the Aura component from interfering with the rendering of the Lightning Web Component. Option C shows the correct syntax for wrapping a Lightning Web Component inside an Aura component. Option A is incorrect because it uses the `<lightning:lwcContainerComponent>` tag, which is not a valid tag for referencing a Lightning Web Component. Option B is incorrect because it uses the `<aura:lwcContainerComponent>` tag, which is also not a valid tag for referencing a Lightning Web Component. Option D is incorrect because it does not use the `lwc:dom="manual"` directive on the Aura component, which is required for manually rendering a Lightning Web Component inside an Aura component. 120. Frage

What two things happen with the Cart during tax implementation?

- A. New entries are written to the Cart
- B. New entries are written to the Order Summary
- C. Previous entries are copied to another object
- D. Previous entries are deleted from the Cart

Antwort: A,D

Begründung:

Two things that happen with the cart during tax implementation are that new entries are written to the cart and previous entries are deleted from the cart. A tax implementation is an integration that calculates and applies tax rates and amounts to a cart or an order based on various factors, such as product type, price, quantity, location, and tax rules. A tax implementation can use either an external tax service provider or custom Apex code to perform the tax calculation. When a tax implementation is invoked for a cart, it writes new entries to the cart with a type of Charge and a charge type of Tax. These entries represent the tax amounts and adjustments that are applied to the cart. Before writing new entries to the cart, the tax implementation deletes any existing entries with a type of Charge and a charge type of Tax from the cart. This ensures that the tax calculation is accurate and up-to-date based on the current state of the cart and avoids any conflicts or inconsistencies with previous tax entries. Previous entries are not copied to another object or modified with the new tax calculation, as these are not valid actions for handling existing tax entries. 121. Frage

Which cart item type is created with the Cart Delivery Group Method after the shipping integration?

- A. Delivery
- B. Shipping
- C. Charge
- D. Surcharge

Antwort: C

Begründung:

A cart item with a type of Charge is created with the Cart Delivery Group Method after the shipping integration. A shipping integration is an integration that calculates and applies shipping costs and options to a cart or an order based on various factors, such as product weight, dimensions, quantity, location, and carrier service level. A shipping integration can use either an external shipping service provider or custom Apex code to perform the shipping calculation. The Cart Delivery Group Method is a method that determines how products are grouped into delivery groups based on their shipping methods and addresses. A delivery group is a logical grouping of products that are shipped together using the same shipping method and address. After performing the shipping calculation for each delivery group, the shipping integration creates a cart item with a type of Charge and a charge type of Shipping for each delivery group. These cart items represent the shipping costs and options that are applied to each delivery group. A cart

item with a type of Surcharge, Shipping, or Delivery does not exist or is not related to the shipping integration. Salesforce [B2B Commerce Developer Guide: Shipping Integration], [B2B Commerce Developer Guide: Cart Delivery Group Method]

122. Frage

Which two aspects are applicable to Page Includes? (2 answers)

- A. Page Includes can be configured as Body Includes Begin.
- B. If a controller is used for an included page, then a merge variable must be present on the page.
- C. Standard Visualforce controls such as apex:form should not be used within a page include
- D. Page Includes must be assigned to an OOTB Page, i.e. Home, Product Detail, etc., and enabled

Antwort: A,C

Begründung:

Two aspects that are applicable to Page Includes are:

Standard Visualforce controls such as apex:form should not be used within a page include. This is because the page include is rendered inside an existing Visualforce page that already has a form element. Using another form element inside the page include will cause conflicts and errors. Instead, the page include should use HTML elements or custom components that do not require a form element.

Page Includes can be configured as Body Includes Begin. This means that the page include will be rendered at the beginning of the body section of the page, before any other content or widgets. This can be useful for adding some custom content or functionality that applies to the whole page, such as a banner, a modal, or a script. Salesforce B2B Commerce and D2C Commerce Developer Guide, Page Includes

123. Frage

What are three ways to implement custom post Order processing? (3 answers)

- A. Modify or add custom Cart formula fields to handle logic.
- B. Use cc_hk_Order.placeTarget to define a new Order Confirmation page which executes additional business logic.
- C. Extend cc_hk_invoice to handle custom business logic post Order processing
- D. Use a Salesforce workflow rule that executes when an Order record is created.
- E. Use Process builder to implement business processes that execute when an Order record is created.

Antwort: B,C,E

Begründung:

Three ways to implement custom post Order processing are:

Extend cc_hk_invoice to handle custom business logic post Order processing. This hook allows modifying the invoice data or performing additional actions after an Order is placed. For example, the hook can send an email notification or update a custom field on the invoice record.

Use cc_hk_Order.placeTarget to define a new Order Confirmation page which executes additional business logic. This hook allows specifying a custom Visualforce page that will be displayed after an Order is placed. The custom page can include additional business logic or user interface elements.

Use Process Builder to implement business processes that execute when an Order record is created. Process Builder is a tool that allows creating workflows and actions based on criteria and conditions. For example, Process Builder can create a task, send an email, or update a record when an Order record is created. Salesforce B2B Commerce and D2C Commerce Developer Guide, Hooks, Process Builder
