No matter when we have compiled a new version of our training materials our operation system will automatically send the latest version of the HPE7-A01 Preparation materials for the exam to your email, all you need to do is just check your email then download it.

HP Aruba Certified Campus Access Professional Exam Sample Questions (Q115-Q120):

NEW QUESTION # 115

Your Director of Security asks you to assign AOS-CX switch management roles to new employees based on their specific job requirements. After the configuration was complete, it was noted that a user assigned with the administrators role did not have the appropriate level of access on the switch.

The user was not limited to viewing nonsensitive configuration information and a level of 1 was not assigned to their role.

Which default management role should have been assigned for the user?

- A. config

- B. sysadmin
- C. operators
- D. helpdesk

Answer: B

NEW QUESTION # 116

Which two statements regarding HPE Aruba Networking Network Analytics Engine (NAE) agents are true? (Choose two.)

- A. NAE agents are active at all times
- B. NAE agents will never consume more than 10% of switch processor resources
- C. A single NAE script can be used by multiple NAE agents
- D. A single NAE agent can be used by multiple NAE scripts.
- E. NAE scripts must be reviewed and signed by Aruba before being used

Answer: C,D

Explanation:

NAE agents are reusable software components that can be referenced by different NAE scripts to perform monitoring or analytics tasks.

A single NAE script can call or leverage multiple NAE agents to collect or analyze different types of data, allowing for modular and flexible automation within Aruba switches.

NEW QUESTION # 117

Your customer has asked you to assign a switch management role for a new user. The customer requires the user role to only have Web UI access to the System > Log page and only have access to the GET method for REST API for the /logs/event resource. Which default AOS-CX user role meets these requirements?

- A. operators
- B. auditors
- C. administrators
- D. sysops

Answer: B

Explanation:

Explanation

The auditors role is the default AOS-CX user role that meets the requirements of having Web UI access to the System > Log page and having access to the GET method for REST API for the /logs/event resource. The auditors role has a level of 1 and allows read-only access to most commands except those related to security or passwords. It also allows access to the Web UI and REST API with limited permissions. The other options are incorrect because they either have higher levels of access or do not allow access to the Web UI or REST API.

NEW QUESTION # 118

Which feature supported by SNMPv3 provides an advantage over SNMPv2c?

- A. Transport mapping
- B. GetBulk
- C. Encryption
- D. Community strings

Answer: C

Explanation:

Encryption is a feature supported by SNMPv3 that provides an advantage over SNMPv2c. Encryption protects the confidentiality and integrity of SNMP messages by encrypting them with a secret key.

SNMPv2c does not support encryption and relies on community strings for authentication and authorization, which are transmitted in clear text and can be easily intercepted or spoofed. Transport mapping, community strings, and GetBulk are features that are common to both SNMPv2c and SNMPv3.

NEW QUESTION # 119

A network administrator is attempting to troubleshoot a connectivity issue between a group of users and a particular server. The administrator needs to examine the packets over a period of time from their desktop; however, the administrator is not directly connected to the AOS-CX switch involved with the traffic flow.

What statements are correct regarding the ERSPAN session that needs to be established on an AOS-CX switch? (Select two)

- A. On the source AOS-CX switch, the destination specified is the switch to which the administrator's desktop is connected
- B. The encapsulation protocol used is VXLAN.
- C. The encapsulation protocol is UDP.
- **D. On the source AOS-CX switch, the destination specified is the administrator's desktop**
- **E. The encapsulation protocol used is GRE.**

Answer: D,E

Explanation:

These are the correct statements regarding the ERSPAN session that needs to be established on an AOS-CX switch for a network administrator to examine the packets over a period of time from their desktop. ERSPAN (Encapsulated Remote Switched Port Analyzer) is a feature that allows an AOS-CX switch to mirror traffic from one or more source ports or VLANs to a remote destination IP address over a GRE (Generic Routing Encapsulation) tunnel. The destination IP address must be the IP address of the administrator's desktop, which must have a packet capture tool installed to receive and analyze the mirrored traffic. The encapsulation protocol used for ERSPAN is GRE, which adds a header to the mirrored packets with information such as source and destination IP addresses, session ID, etc. The other statements are incorrect because they either do not specify the correct destination IP address or do not use ERSPAN or GRE.
