

New Guide AD0-E724 Files & Exam AD0-E724 Experience

What's more, part of that Dumpkiller AD0-E724 dumps now are free: <https://drive.google.com/open?id=1FNqchKGlpqxN3a0crgGVkeuyrqgSX0jP>

When you choose AD0-E724 valid study pdf, you will get a chance to participate in the simulated exam before you take your actual test. The contents of AD0-E724 exam torrent are compiled by our experts through several times of verification and confirmation. So the AD0-E724 questions & answers are valid and reliable to use. You can find all the key points in the AD0-E724 practice torrent. Besides, the AD0-E724 test engine training equipped with various self-assessment functions like exam history, result scores and time setting, etc.

Dumpkiller is a leading platform that has been helping the Adobe AD0-E724 exam candidates for many years. Over this long time period, countless Adobe AD0-E724 exam candidates have passed their dream Commerce Developer Professional (AD0-E724) certification and they all got help from valid, updated, and Real AD0-E724 Exam Questions. So you can also trust the top standard of Adobe AD0-E724 exam dumps and start AD0-E724 practice questions preparation without wasting further time.

Avail First-grade New Guide AD0-E724 Files to Pass AD0-E724 on the First Attempt

The users will notice the above favorable qualities in the web-based Adobe AD0-E724 Practice Test. But the distinguishing factor that will add to your comfort is that it is suitable for all operating systems (IOS, Macs, Androids, and Windows). The valuable part of this format is that it does not require frustrating installations or heavy plugins.

Adobe Commerce Developer Professional Sample Questions (Q69-Q74):

NEW QUESTION # 69

A developer defined a new table in db.schema.xml while creating a new module.

What should be done to allow the removal of columns from the database when deleting them from db.schema.xml?

- A. The removable columns should be defined in db.schema_blacklist.json.
- **B. The removable columns should be defined in db_schema_whitelist.json.**
- C. The columns should have "removable" attribute set to "true" in the db.schema.xml.

Answer: B

Explanation:

If a developer wants to allow the removal of columns from the database when deleting them from db.schema.xml, they need to define the removable columns in the db_schema_whitelist.json file. This file will tell Magento which columns can be removed from the database.

To allow columns to be removed from the database when they are deleted from db.schema.xml, they must be listed in the db_schema_whitelist.json file. This file acts as a reference for which database schema elements are safe to modify or delete, providing a safeguard against unintentional data loss during schema updates.

NEW QUESTION # 70

What are two features with Adobe Commerce Cloud that come out of the box? (Choose Two.)

- **A. Fastly**
- B. A built in connector with all major blog platforms
- C. Support ACL
- **D. Continuous deployment provided with the platform**

Answer: A,D

Explanation:

Adobe Commerce Cloud offers several out-of-the-box features, including built-in Fastly integration for CDN and web application firewall services, as well as continuous deployment capabilities through its cloud infrastructure.

* Continuous Deployment:

* Adobe Commerce Cloud supports continuous deployment workflows, allowing code to be automatically built, tested, and deployed through its integration with Git and cloud CI/CD pipelines.

* Fastly Integration:

* Fastly is included as a CDN and caching layer with Adobe Commerce Cloud, offering improved site speed and security through caching and a web application firewall.

* Why Options B and D are Correct:

* Both of these features are inherent to Adobe Commerce Cloud. Option A (Support ACL) is a part of the Magento Admin Panel but is not a cloud-specific feature, and Option C (Blog platform connector) is not provided out-of-the-box.

NEW QUESTION # 71

How would a developer enable the minification of CSS files on an Adobe Commerce Cloud Staging environment?

- **A. SSH to the Adobe Commerce Staging environment. From the command line**

```
ece-tools config:set dev/css/minify_files 1
bin/magento setup:static-content:deploy
```

- B. Update the stores > setting > configuration > Advanced > Developer > css configuration in the Admin Panel.
- C. Locally from the command line
bin/magento config:set --lock-config dev/css/minify_files 1
Commit the app/etc/config.php file and redeploy.

Answer: A

Explanation:

For Adobe Commerce Cloud environments, modifying configuration settings often involves using the ece-tools command-line interface. To enable CSS minification on a staging environment, SSH into the environment and use ece-tools to set the configuration.

* Using ece-tools for Cloud Environments:

* The ece-tools command sets environment configurations, which is preferable in Cloud environments as changes are made outside of the database, allowing for consistent configuration across deployments.

* Why Option C is Correct:

* SSH access to the environment and using ece-tools ensures that settings are deployed properly.

Option A involves committing app/etc/config.php, which is not directly related to Adobe Commerce Cloud's best practices. Option B involves the Admin panel, which is less practical for deployment consistency.

* Steps:

* After setting the configuration, run bin/magento setup:static-content:deploy to apply the changes.

NEW QUESTION # 72

On an Adobe Commerce Cloud platform, what type of environment will be provisioned when launching the CLI for Commerce command `magento-cloud environment:branch <environment-name> <parent-environment-id>`?

- A. An integration environment with the code and database from the parent environment.
- B. An empty integration environment without any code or database.
- C. An integration environment with fresh Adobe Commerce Cloud installation.

Answer: A

Explanation:

The type of environment that will be provisioned when launching the CLI for Commerce command `magento-cloud environment:branch <environment-name> <parent-environment-id>` is an integration environment with the code and database from the parent environment. Integration environments are temporary environments that are used for testing and development purposes on the Adobe Commerce Cloud platform. They can be created from any branch of code and have their own dedicated database and services. When creating an integration environment using the CLI for Commerce command, the code and database from the parent environment are copied to the new integration environment, creating an exact replica of the parent environment. NEW QUESTION # 73

An Adobe Commerce developer has added an `iframe` and included a JavaScript library from an external domain to the website.

After that, they found the following error in the console:

Refused to frame [URL] because it violates the Content Security Policy directive.

In order to fix this error, what would be the correct policy ids to add to the `csp_whitelist.xml` file?

- A. `default-src` and `object-src`
- B. `frame-src` and `script-src`
- C. `frame-ancestors` and `connect-src`

Answer: B

Explanation:

The Content Security Policy (CSP) in Adobe Commerce (Magento) restricts the types of content that can be loaded on a page to protect against malicious attacks, such as cross-site scripting (XSS). When an `iframe` is added, and a JavaScript library is loaded from an external source, these resources must be whitelisted explicitly using the `csp_whitelist.xml` file.

In this specific case:

* The `frame-src` directive controls the sources from which iframes can be embedded. Since the developer is embedding an `iframe` from an external domain, they need to whitelist this domain for `frame-src`.

* The `script-src` directive controls the sources from which JavaScript files can be loaded. The external JavaScript library must be whitelisted under `script-src` to allow it to execute.

Therefore, the correct policy IDs to whitelist are:

* `frame-src`: to allow the embedding of content from an external domain in an `iframe`.

* `script-src`: to allow the loading and execution of JavaScript files from the external domain.

Here's how to update the `csp_whitelist.xml` file with the correct directives:

```
<?xml version="1.0"?>
```

```
<whitelist
```

```
  xmlns:xs="http://www.w3.org/2001/XMLSchema-instance" xs:noNamespaceSchemaLocation="urn:magento:module:Magento_Csp:etc/csp_whitelist.xsd"
```

```
>
```

```
<policy id="frame-src">
```

```
<values>
```

```
<value id="your-external-domain.com"/>
```

```
</values>
```

```
</policy>
```

```
<policy id="script-src">
<values>
<value id="your-external-domain.com"/>
</values>
</policy>
</whitelist>
```

Replace your-external-domain.com with the actual domain of the external iframe and JavaScript source.
