## C_WME_2506 Valid Test Forum - New C_WME_2506 Test Testking

This is a simple and portable document of real SAP C_WME_2506 Exam Questions. It contains actual SAP C_WME_2506 exam questions and answers and can be helpful for quick revision or for studying on the go. It is also printable so you can easily study on a hard copy of the pdf having a break from staring.

## SAP C_WME_2506 Exam Syllabus Topics:

| Topic | Details |
|---|---|
| Topic 1 | • Advancing your Skills in Building WalkMe Solutions: This section of the exam tests the advanced competencies of functional and business analysts in designing more complex and customized WalkMe solutions within SAP platforms. It requires a deeper understanding of user segmentation, advanced rules and triggers, performance optimization, and the use of analytics to refine user experiences. Candidates are expected to demonstrate their ability to design scalable and impactful guidance that aligns with SAP business processes and drives user adoption across the enterprise. |

| | |
|---|---|
| Topic 2 | • Getting Started with Building WalkMe Solutions: This section of the exam evaluates the capabilities of WalkMe implementers and focuses on the practical aspects of creating and configuring WalkMe solutions. It includes understanding the WalkMe Editor, planning solution flows, creating Smart Walk-Thrus, Launchers, and ShoutOuts, and managing end-user guidance effectively. Candidates should be comfortable building initial WalkMe experiences that improve SAP usability and provide contextual help for users navigating SAP applications. |
| Topic 3 | • Starting your Digital Adoption Journey: WalkMe Fundamentals: This section of the exam measures the skills of SAP project managers and covers the foundational concepts of digital adoption within SAP environments using WalkMe. Candidates are expected to understand the value of digital adoption platforms, the basic components of WalkMe, and how these tools align with business goals. The section emphasizes knowledge of the user experience within SAP and the ability to identify opportunities for improving digital workflows through in-app guidance and automation. |

# SAP Certified Associate - WalkMe Digital Adoption Consultant Sample Questions (Q57-Q62):

**NEW QUESTION # 57**
Your product team has informed you that there is a UI element on the website that has no purpose, is causing user confusion, and they need it removed. They also mentioned that they don't have enough development resources to remove it for at least a few weeks.
What WalkMe solution can you build to help resolve this issue?

- A. Build a mandatory field Launcher and place it on top of the UI element.
- B. Build a Resource to a support article on the UI element.
- C. Build a Launcher that will cover up the UI element and make it invisible.
- D. Build a Mini Menu and place it next to the button.

**Answer: C**

**NEW QUESTION # 58**
You have a Smart Walk-Thru that begins on the home page, directs the user to a product page where there is a Subscribe button, and continues from there. If the user is already on a product page with a Subscribe button, you want the user to be able to start the Smart Walk-Thru from that page. However, since not all product pages have a Subscribe button, you don't want the user to be able to start the Smart Walk-Thru on those pages because the Smart Walk-Thru is specifically related to product subscriptions. The URL of the product pages starts with:www.PetShop.com/product-page. Following best practices, which rule(s) would you suggest to use as a Start Point?

- A. Current URL -> Contains -> /product-page/mixed-bird-seeds OR Element on screen -> is Visible
- B. Current URL -> Contains -> /product-page AND Element on screen -> Is Visible
- C. Current URL -> is exactly ->www.PetShop.com/product-page
- D. Element On Screen -> is visible

**Answer: B**

Explanation:
To ensure the Smart Walk-Thru starts only on product pages with a Subscribe button, the Start Point must combine URL and element conditions. The ruleCurrent URL -> Contains -> /product-page AND Element on screen -> Is Visibletargets pages with "/product-page" in the URL (covering all product pages) and checks for the Subscribe button's visibility. This ensures the Smart Walk-Thru is available only on relevant pages, following best practices for precise and reliable Start Points.
The other options are incorrect:
* Element On Screen -> is visible(A) is too broad, applying to any page with the element.
* Current URL -> is exactly ->www.PetShop.com/product-page(C) is too restrictive, missing subpaths.
* Current URL -> Contains -> /product-page/mixed-bird-seeds OR Element on screen -> is Visible (D) is too specific to one product and uses OR logic, allowing starts on non-relevant pages.
Extract from Official WalkMe Documentation:
According to the WalkMe Editor User Guide (SAP WalkMe Digital Adoption Consultant Study Guide, Section 2.2: Smart Walk-

Thrus):

"For Start Points, combine URL rules (e.g., 'Current URL contains /product-page') with element visibility checks (e.g., 'Element on screen is visible') to ensure Smart Walk-Thrus start only on relevant pages." The courseGetting Started with Building WalkMe Solutionsstates:

"Use AND logic in Start Points, like URL contains and element visibility, to restrict Smart Walk-Thru initiation to pages meeting all criteria, ensuring relevance." Option B is the best Start Point rule.

## NEW QUESTION # 59

When doing quality assurance and testing content, which of the options below should we be looking for?

Note: There are 3 correct answers to this question.

- A. Smart Walk-Thru triggers work as expected.
- B. Page load time is under ten seconds.
- C. The website's background color matches the corporate branding.
- D. Content appears as expected.
- E. Balloons are not blocking important site elements.

**Answer: A,D,E**

Explanation:

Quality assurance (QA) and testing of WalkMe content focus on ensuring that the content functions correctly, displays appropriately, and enhances the user experience without causing disruptions. The key aspects to check include:

* Content appears as expected(B): Verify that WalkMe content (e.g., SmartTips, ShoutOuts) displays with the correct text, styling, and positioning as designed in the Editor.

* Balloons are not blocking important site elements(C): Ensure that WalkMe balloons (e.g., Smart Walk-Thru steps or SmartTips) do not obscure critical UI elements, such as buttons or forms, to maintain usability.

* Smart Walk-Thru triggers work as expected(D): Confirm that triggers (e.g., clicks, page loads) initiate Smart Walk-Thru steps correctly, ensuring smooth guidance.

The other options are incorrect:

* Page load time under ten seconds(A) is a website performance metric, not a WalkMe QA responsibility.

* Website's background color matching corporate branding(E) is outside WalkMe's scope, as it pertains to the website's design.

Extract from Official WalkMe Documentation:

According to the WalkMe Editor User Guide (SAP WalkMe Digital Adoption Consultant Study Guide, Section 1.4: Quality Assurance):

"During QA, verify that content displays correctly, balloons do not block critical UI elements, and Smart Walk-Thru triggers function as intended. These checks ensure a seamless user experience." The courseGetting Started with Building WalkMe Solutionsstates:

"QA involves confirming that WalkMe content appears as designed, does not obstruct important page elements, and that triggers for Smart Walk-Thrus execute reliably." Options B, C, and D are the correct aspects to focus on during QA.

## NEW QUESTION # 60

What are the key benefits of using WalkMe's Digital Adoption Platform (DAP)?

Note: There are 3 correct answers to this question.

- A. Improved feature awareness and faster platform activation
- B. Eliminates the need for IT support teams
- C. Automated onboarding and in-app guidance
- D. Replaces all software within an organization
- E. Enhanced visibility into user engagement and friction points

**Answer: A,C,E**

**NEW QUESTION # 61**

What is the primary difference between Global Level Design and Local Level Design in WalkMe?

- A. Global Level Design is only available for administrators, while Local Level Design is available for all users.
- B. Global Level Design only affects ShoutOuts, while Local Level Design affects SmartTips and Launchers.
- C. Global Level Design applies to all WalkMe content, while Local Level Design applies to specific items and can override global settings.
- D. Global Level Design requires CSS knowledge, while Local Level Design does not for certain elements.

**Answer: C**

**NEW QUESTION # 62**

......

Before we decide to develop the C_WME_2506 preparation questions, we have make a careful and through investigation to the customers. We have taken all your requirements into account. Firstly, the revision process is long if you prepare by yourself. If you collect the keypoints of the C_WME_2506 exam one by one, it will be a long time to work on them.
