최신 CompTIA Tech+ FC0-U71 무료샘플문제 (Q75-Q80):

질문 # 75

Which of the following devices extends the range of a network?

- A. Access point
- B. Server
- C. Modem
- D. Host firewall

정답: A

설명:

An access point is a networking hardware device that allows wireless devices to connect to a wired network using Wi-Fi or related standards. It helps extend the range of a wireless network by creating additional coverage areas. This is directly outlined in CompTIA ITF+ documentation:

"A wireless access point (AP) is a device that allows wireless clients to connect to a wired network. It serves to extend or broaden the wireless coverage." In contrast:

A modem connects to the internet via an ISP.

A server provides network services, not range.

A host firewall protects a single device or network; it does not expand connectivity.

Thus, the most appropriate answer is D.

질문 # 76

Which of the following is used to securely transfer files over the internet?

- A. Compression
- B. Encryption
- C. Permissions
- D. Email

정답: B

설명:

Encryption protects data by encoding it, so it can only be accessed or read by someone with the proper key or password. It ensures confidentiality during file transfers over insecure networks like the internet.

"Encryption is used to protect data in transit, ensuring that only authorized parties can read the content during transmission." -

CompTIA ITF+ Security Essentials Correct answer: C

질문 # 77

A user has concerns about device theft because they are working on a laptop at a local coffee shop. Which of the following physical devices would be best to protect the laptop?

- A. Firewall
- B. Privacy shield
- C. Cable lock
- D. USB lock

정답: C

설명:

A cable lock physically secures a laptop to a stationary object, helping to prevent theft in public spaces like coffee shops.

Other options:

*Firewall protects against network threats,

*Privacy shield prevents screen snooping,

*USB lock restricts port access but doesn't prevent theft.

질문 # 78

Users are discussing the birthdays and home addresses of notable public figures in a public chat room. Which of the following security concepts is being compromised?

- A. Privacy
- B. Availability

- C. Integrity
- D. Confidentiality

정답: A

설명:

Discussing birthdays and home addresses of individuals - even public figures - violates privacy, which concerns the protection of personal or sensitive information.

Other options:

*Confidentiality refers to restricting access to sensitive data,

*Integrity ensures data is not altered,

*Availability ensures data and systems are accessible when needed.

질문 # 79

A refrigerator sends an alert to user's phone when there is no more milk. Which of the following OS types is being used in the refrigerator?

- A. Embedded
- B. Server
- C. Workstation
- D. Mobile

정답: A

설명:

The refrigerator uses an embedded operating system, which is a specialized OS designed to run on dedicated devices like appliances, allowing them to perform specific functions such as sending alerts.

Server, mobile, and workstation OS types are intended for broader, more complex systems.
