Not only our GIAC GICSP study guide has the advantage of high-quality, but also has reasonable prices that are accessible for every one of you. So it is incumbent upon us to support you. On the other side, we know the consumers are vulnerable for many exam candidates are susceptible to ads that boost about GIAC GICSP skills their practice with low quality which may confuse exam candidates like you, so we are trying hard to promote our high quality GICSP study guide to more people.

As for the GICSP study materials themselves, they boost multiple functions to assist the learners to learn the study materials efficiently from different angles. For example, the function to stimulate the exam can help the exam candidates be familiar with the atmosphere and the pace of the Real GICSP Exam and avoid some unexpected problem occur. Briefly speaking, our GICSP training guide gives priority to the quality and service and will bring the clients the brand new experiences and comfortable feelings to pass the GICSP exam.

## Exam GICSP Pattern | Pass GICSP Rate

If you want to take the GICSP exam then keep in your mind that proper Global Industrial Cyber Security Professional (GICSP) preparation is the key to success. Without GIAC GICSP test preparation, you can do nothing. For well GIAC GICSP exam preparation, I would like to recommend you DumpsValid. DumpsValid is the top-rated and leading platform that offers the best Global Industrial Cyber Security Professional (GICSP), GICSP exam study material. DumpsValid provides the latest and real GICSP PDF Questions and practice tests that will assist you to pass the GIAC GICSP test on the first try. DumpsValid latest Global Industrial Cyber Security Professional (GICSP) dumps are the best to prepare and pass the Global Industrial Cyber Security Professional (GICSP), version GICSP certification test. These genuine GICSP exam dumps assist you to achieve excellent scores in the GICSP test. DumpsValid design this GIAC GICSP practice test material with the help of the world's most respected professionals.

## GIAC Global Industrial Cyber Security Professional (GICSP) Sample Questions (Q46-Q51):

### NEW QUESTION # 46

Which of the following can an attacker gain by obtaining PLC logic project files for a SCADA system?

- A. Data regarding personnel and hiring practices
- B. Information about operational firewall rulesets
- C. Details about the network architecture
- D. Schedule of vendor product releases

**Answer: C**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

PLC logic project files contain the source code and configuration used to program a programmable logic controller (PLC). These files often reveal:

Control logic and operational sequences

Network addressing information

Interconnections between devices and systems

Thus, an attacker with access to these files can infer details about the network architecture (B), including how devices communicate, which protocols are used, and possibly the network topology.

Personnel data (A), firewall rulesets (C), and vendor release schedules (D) are not typically stored within PLC logic projects.

The GICSP framework stresses protecting such engineering artifacts because their compromise can provide an attacker with valuable insight to facilitate targeted attacks on ICS.

### NEW QUESTION # 47

What should be considered when implementing fieldbus protocols over an Ethernet network?

- A. Communications between machines are limited to one host at a time
- B. Different protocols cannot route across the same infrastructure
- C. Different protocols will need a bridging device to talk to each other
- D. The network cannot be segmented into smaller subnets or VLANs

**Answer: C**

Explanation:

Fieldbus protocols are industrial communication standards used at lower levels of ICS networks. When these protocols are implemented over Ethernet, several considerations arise:

Different fieldbus protocols (such as Modbus TCP, PROFINET, EtherNet/IP) have unique data formats and communication methods.

To enable communication between devices using different protocols, a bridging device or gateway (D) is typically required to translate between protocol types.

Other options are incorrect because:

(A) Ethernet allows multiple hosts to communicate simultaneously.

(B) Different protocols can coexist on the same physical infrastructure using VLANs or other segmentation.

(C) Networks can and should be segmented into VLANs for security and performance.

GICSP covers these considerations in the ICS Security Architecture domain emphasizing protocol interoperability and network design.

### NEW QUESTION # 48

Which control helps prevent threats to Integrity?

- A. Centralized LDAP authentication
- B. Implementing digital signatures
- C. Logging IDS alerts
- D. Firewall egress filtering

**Answer: B**

Explanation:

Integrity in cybersecurity ensures that data and systems are not altered or tampered with in an unauthorized manner. To protect integrity, controls must verify that data originates from a trusted source and has not been changed.

Digital signatures (D) provide cryptographic proof of data origin and integrity by enabling recipients to verify that the data has not been altered since it was signed.

Firewall egress filtering (A) limits outbound traffic but primarily protects confidentiality and availability, not directly integrity.

Logging IDS alerts (B) supports detection and auditing but is reactive rather than preventive.

Centralized LDAP authentication (C) manages user authentication and access control, mainly protecting confidentiality and

accountability.

GICSP highlights digital signatures as a core control to maintain data integrity, especially for firmware, configuration files, and critical commands within ICS.

#### NEW QUESTION # 49

An attacker crafts an email that will send a user to the following site if they click a link in the message. What else is necessary for this type of attack to work?

- A. The attacker must obtain a session cookie from an authorized HMI user
- B. The attacker must enclose the URL parameter with <script> tags to run the code
- C. The user clicking the link must be an administrator on the network
- D. The user must be authenticated to the HMI interface before clicking the link

**Answer: D**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

The URL indicates a command to disconnect a sensor on an HMI interface, likely part of a Cross-Site Request Forgery (CSRF) or similar web-based attack.

For such an attack to succeed, the user must be authenticated to the HMI interface before clicking the link (C), so that the request is executed with valid session privileges.

(A) Obtaining a session cookie would help but is not strictly necessary if the user is already authenticated.

(B) User administrative rights may not be necessary depending on HMI design, but authentication is essential.

(D) URL parameters generally don't require script tags unless exploiting Cross-Site Scripting (XSS).

GICSP emphasizes authentication and session management as critical controls to mitigate web-based attacks on ICS interfaces.

#### NEW QUESTION # 50

Martin is writing a document that describes in general terms how to secure embedded operating systems. The document includes issues that are specific to embedded devices vs desktop and laptop operating systems.

However, it does not call out specific flavors and versions of embedded operating systems. Which type of document is Martin writing?

- A. Guideline
- B. Standard
- C. Policy
- D. Procedure

**Answer: A**

Explanation:

A Guideline (A) provides general recommendations and best practices without mandatory requirements or detailed instructions.

Procedures (B) are step-by-step instructions for specific tasks.

Standards (C) specify mandatory requirements, often with measurable criteria.

Policies (D) establish high-level organizational directives and rules.

Martin's document provides general, non-mandatory advice applicable broadly, fitting the definition of a guideline.
