Japancertを選ぶかどうか状況があれば、弊社の無料なサンプルをダウンロードしてから、決めても大丈夫です。こうして、弊社の商品はどのくらいあなたの力になるのはよく分かっています。JapancertはSalesforce Health-Cloud-Accredited-Professional「Salesforce Health Cloud Accredited Professional」認証試験を助けて通じての最良の選択で、100%のSalesforce Health-Cloud-Accredited-Professional認証試験合格率のはJapancert最高の保証でございます。君が選んだのはJapancert、成功を選択したのに等しいです。

SalesforceのHealth-Cloud-Accredited-Professional試験に受かるために一所懸命頑張って勉強していれば、あなたは間違っているのです。もちろん頑張って勉強するのは試験に合格することができますが、望ましい効果を達成できないかもしれません。現在はインターネットの時代で、試験に合格するショートカットがたくさんあります。JapancertのSalesforceのHealth-Cloud-Accredited-Professional試験トレーニング資料はとても良いトレーニング資料で、あなたが試験に合格することを保証します。この資料は値段が手頃だけでなく、あなたの時間を大量に節約できます。そうしたら、半分の労力で二倍の効果を得ることができます。

Salesforce Health-Cloud-Accredited-Professional認定資格 & Health-Cloud-Accredited-Professional更新版

受験生の皆様にもっと多くの助けを差し上げるために、Japancert のSalesforceのHealth-Cloud-Accredited-Professionalトレーニング資料はインターネットであなたの緊張を解消することができます。Health-Cloud-Accredited-Professional 勉強資料は公式SalesforceのHealth-Cloud-Accredited-Professional試験トレーニング授業、SalesforceのHealth-Cloud-Accredited-Professional 自習ガイド、SalesforceのHealth-Cloud-Accredited-Professional の試験と実践やSalesforceのHealth-Cloud-Accredited-Professionalオンラインテストなどに含まれています。Japancert がデザインしたSalesforceのHealth-Cloud-Accredited-Professional模擬トレーニングパッケージはあなたが楽に試験に合格することを助けます。Japancertの勉強資料を手に入れたら、指示に従えば Health-Cloud-Accredited-Professional認定試験に受かることはたやすくなります。

Salesforce Health Cloud Accredited Professional 認定 Health-Cloud-Accredited-Professional 試験問題 (Q38-Q43):

質問 # 38

A medical device organization needs to track account information and its geographical details to provide information to representatives onsite.

Which three objects support this scenario?

Choose 3 answers

- A. Clinic Location
- B. Facility Address
- C. Location
- D. Healthcare Facility

正解: B、C、D

解説:

In Salesforce Health Cloud, when an organization needs to track account information along with geographical details (like facilities, addresses, and locations), the following objects are used:

A . Location

A standard object in Salesforce used to store physical location data such as addresses, latitude/longitude, and site details.

Useful for mapping and onsite representative visits.

B . Healthcare Facility

Represents the organization's clinical facilities (hospitals, clinics, labs, etc.).

Connected to Accounts to model the healthcare network.

C . Facility Address

Stores detailed address information for a healthcare facility.

Provides geographical data needed by onsite reps.

Why not D. Clinic Location?

Clinic Location is not a standard Health Cloud object. The correct objects are Healthcare Facility + Facility Address + Location to track facility and geographical details.

Salesforce Health Cloud Reference:

* Salesforce Health Cloud Provider Data Model:

"Use the Healthcare Facility object to represent hospitals, clinics, and other care sites."

"Use the Facility Address object to store location-specific details about healthcare facilities."

"The Location object stores standardized address and geographic information."

質問 # 39

Bloomington Caregivers needs to use the objects for the Clinical data model as part of its new Health Cloud implementation.

Which preference should Bloomington Caregivers' administrator ensure is enabled?

- A. FHIR-Aligned Data Model org preference
- B. FHIR-Aligned EHR Data Model org preference
- C. Clinical R4 Model org preference

- D. Clinical Data Model org preference

正解: A

質問 # 40

A consultant needs to implement Health Cloud and is in the discovery stage of the project.

Which three approaches should the consultant consider to collect information to understand where Health Cloud fits within the application architecture?

- A. Identify key stakeholders and how they measure success
- B. Identify personas involved and their existing pain points.
- C. Start writing Apex code to customize Health Cloud
- D. Create business process diagrams to understand information flow
- E. Build an architecture diagram depicting Health Cloud integrations

正解: A、B、E

解説:

A is correct because identifying personas involved and their existing pain points can help the consultant understand the current state of the business and the needs and expectations of the users.

B is incorrect because writing Apex code to customize Health Cloud is not a discovery activity, but a development activity that should be done after the requirements and design are finalized.

C is correct because building an architecture diagram depicting Health Cloud integrations can help the consultant understand how Health Cloud fits within the application architecture and what data sources and systems need to be connected.

D is incorrect because creating business process diagrams to understand information flow is not a discovery activity, but a design activity that should be done after the requirements are gathered and validated.

E is correct because identifying key stakeholders and how they measure success can help the consultant understand the vision and goals of the project and the expected outcomes and benefits of Health Cloud.

質問 # 41

A developer needs to modify the out-of-the-box Advanced Patient Card to display the Category, SubjectID, and Date for active Clinical Alerts.

Which three steps should the developer take to accomplish this?

- A. Create a DataRaptor to extract necessary data.
- B. Clone the parent card.
- C. Change the child card state to show active.
- D. Create and activate a new child card.
- E. Define session variables to control visibility of clinical data.

正解: A、C、D

解説:

To modify the out-of-the-box Advanced Patient Card to display the Category, SubjectID, and Date for active Clinical Alerts, a developer should take the following steps:

Create and activate a new child card: This step allows the developer to create a custom card that inherits the properties of the parent card and displays additional information from Clinical Alerts object⁴.

Create a DataRaptor to extract necessary data: This step allows the developer to create a DataRaptor Extract that queries the Clinical Alerts object and returns the Category, SubjectID, and Date fields for active records⁵.

Change the child card state to show active: This step allows the developer to change the state of the child card from inactive to active, so that it is visible on the Advanced Patient Card component⁶. Cloning the parent card, defining session variables, or creating an Integration Procedure are not required steps for this task.

質問 # 42

A provider is looking to view a patient's insurance coverage, including co-pay and deductible information, prior to their appointment. Using Health Cloud, which two steps should a consultant take to access this information in the Benefit Verification component?

Choose 2 answers

- A. Create a new record for the HCBenVerConnect custom setting.
- **B. Configure the Connection Label with the source system's API details.**
- C. Configure the link to the clearinghouse's endpoint using a Uniform Resource Identifier (URI) path.
- **D. Create a named credential to support authenticated callouts.**

正解: B、D

解説:

To access a patient's insurance coverage, co-pay, and deductible information in the Benefit Verification component of Health Cloud, you need to integrate with external systems (e.g., payers or clearinghouses).

Health Cloud provides the Benefit Verification component, which relies on secure API integrations for real-time eligibility and benefits checks.

Step-by-Step Reference:

* Configure the Connection Label with the source system's API details:

* Extract:

"In Benefit Verification setup, specify the Connection Label and configure the external endpoint and API details to connect to the benefit verification source system." (Source: Administer Health Cloud - Benefit Verification Setup)

* Create a named credential to support authenticated callouts:

* Extract:

"Use Named Credentials to securely store authentication settings and endpoint information for callouts to external services (such as clearinghouses or payers) required for benefit verification." (Source: Salesforce Security Guide and Administer Health Cloud - Benefit Verification)

* Why not A or B?

* The HCBenVerConnect custom setting is not part of the standard configuration for the out-of-the-box Benefit Verification component.

* Configuring a URI path alone (without API details and credentials) does not enable secure, authenticated communication.

質問 # 43
