Mule-Dev-201 Reliable Dumps - Mule-Dev-201 Mock Exams

Consider sitting for an Salesforce Certified MuleSoft Developer exam and discovering that the practice materials you've been using are incorrect and useless. The technical staff at Actual4Dumps has gone through the Salesforce certification process and knows the need to be realistic and exact. Hundreds of professionals worldwide examine and test every Salesforce Mule-Dev-201 Practice Exam regularly. These practice tools are developed by professionals who work in fields impacting Salesforce Salesforce Certified MuleSoft Developer, giving them a foundation of knowledge and actual competence. Our Salesforce Mule-Dev-201 exam questions are created and curated by industry specialists.

Salesforce Certified MuleSoft Developer Sample Questions (Q175-Q180):

NEW QUESTION # 175
What MuleSoft API-led connectivity layer is intended to expose part of a backend database without business logic?

- A. Experience layer
- B. System layer
- C. Data layer
- D. Process layer

Answer: B

Explanation:
Correct answer is System layer
System APIs provide a means for insulating the data consumers from the complexity or changes to the underlying backend systems.
MuleSoft recommends three-layered approach to API-led connectivity, highlighting the three layers:
* System APIs
* Process APIs
* Experience APIs
System APIs are the core systems of record underlying core systems of record (e.g. ERPs, key customer and billing systems, databases, etc.). Process APIs allow you to define a common process which the organization can share, and these APIs perform specific functions, provide access to non-central data, and may be built by either Central IT or Line of Business IT. And finally, the Experience APIs are the means by which data can be reconfigured so that it is most easily consumed by its intended audience, all from a common data source.
The three-layered structure allows for a seamless flow of data from systems of record to new experiences, and allows for reusability of assets rather than point to point connections. This approach provides a distributed and tailored approach to architecture, greater flexibility through loose coupling, and deeper operational visibility into what is being built.

NEW QUESTION # 176
An organization's Center for enablement (C4E) has built foundational assets (API specifications and implementation templates, common frameworks, and best practices guides) and published them to Anypoint Exchange.
What is a metric related to these foundational assets that helps the organization measure the success of it's C4E efforts?

- A. Correlation of key performance indicators (KPI) of production applications with foundational assets
- B. Correlation of each foundational asset with the counts of developers that download such asset
- C. Utilization counts of foundational assets in production applications
- D. Count how many Lines Of Business (LoBs) onsumed each foundational asset

Answer: A

Explanation:
Below are the Key performance indicators (KPIs), to measure and track the and success of the C4E and its activities, as well as the growth and health of the application network. Most of the metrics can be extracted automatically, through REST APIs, from Anypoint Platform.
* # of assets published to Anypoint Exchange
* # of interactions with Anypoint Exchange assets
* # of APIs managed by Anypoint Platform
* # of System APIs managed by Anypoint Platform
* # of API clients registered for access to APIs
* # of API implementations deployed to Anypoint Platform
* # of API invocations
* # or fraction of lines of code covered by automated tests in CI/CD pipeline

* Ratio of info/warning/critical alerts to number of API invocations

NEW QUESTION # 177

Refer to the exhibits.

A web client sends sale data ina POST request to the Mule application. The Transform Message component then enrich the payload by prepending a vendor name to the sale data.

What is written to the sales.csv file when the flow executes?

- A. The enriched payload in XML format
- B. The enriched payload in CSV format
- C. An error message
- D. The enriched payload in JSON format

Answer: D

Explanation:

Reference:https://developer.mulesoft.com/tutorials-and-howtos/quick-start/how-to-create-your-first-munit- test-in-anypoint-studio

NEW QUESTION # 178

Refer to the exhibits.

A web client submits the request to the HTTPListener. What response message would be returned to web client?

- A. End
- B. Start
- C. String is not blank
- D. No response would be sent back to client and request will get errored out in Mule

Answer: C

Explanation:

Correct answer is String is not blank.

---- Here's specifically what is happening here:

1) Payload is successfully set to "Start"

2) The Is Blank String validator createsan Error Object because the payload is string "Start". Execution stops

#[error.description] = "String is not blank"

3) Because no error handler is defined, the Mule default error handler handles the error. Remember, at its heart, the Mule Default Error handler is an error handling scope with just an on error propagate

4) "String is not blank" is the error message returned to the requestor in the body of the HTTP requestHTTP Status Code: 500

NEW QUESTION # 179

How are multiple conditions used in a Choice router to route events?

- A. To find the FIRST true condition, then distribute the event to the ONE matched route.
- B. To route the same event to the matched route of EVERY true condition
- C. To find the FIRST true condition, then route the same event to the matched route and ALL FOLLOWING routes
- D. None of these

Answer: A

Explanation:

Choice router finds the FIRST true condition, then distribute the event to the ONE matched route.

MuleSoft Doc Ref: https://docs.mulesoft.com/mule-runtime/4.1/choice-router-concept The Choice router dynamically routes messages through a flow according to a set of DataWeave expressions that evaluate message content. Each expression is associated with a different routing option. The effect is to add conditional processing to a flow, similar to an if/then/else code block in most

programming languages.

Only one of the routes in the Choice router executes, meaning that the first expression that evaluates to true triggersthat route's execution and the others are not checked. If none of the expressions are true, then the default route executes.
