If you are an experienced Salesforce architect looking to validate your expertise in managing data security and sharing settings, the Salesforce Sharing-and-Visibility-Architect Certification is the perfect credential for you. Salesforce Certified Sharing and Visibility Architect certification exam is challenging, but passing it can help you advance your career and increase your earning potential. With the right preparation and study resources, you can pass the exam and become a Salesforce Certified Sharing and Visibility Architect.

Salesforce Certified Sharing and Visibility Architect Sample Questions (Q26-Q31):

NEW QUESTION # 26

Universal Containers (UC) has created a public group with certain Sales Engineers to help on complex deals and a sharing rule to grant access to these opportunities. Opportunity OWD is private.

What is the impact of these sharing settings?

- A. Sales Engineers that have a similar role of the Sales Engineers of the public group will also have access to these records.
- B. Subordinates of Managers who have Sales Engineers in the public group will also have access to these records.
- C. Sales Engineers direct reports will also have access to these records.
- **D. Sales Engineers Managers and their managers in the role hierarchy will also have access to these records.**

Answer: D

Explanation:

Explanation

The impact of these sharing settings is that Sales Engineers Managers and their managers in the role hierarchy will also have access to these records. This is because sharing rules extend access to users in public groups, roles, or territories. The access granted by a sharing rule is inherited by users above those users in the role hierarchy¹. Subordinates of Managers who have Sales Engineers in the public group, Sales Engineers that have a similar role of the Sales Engineers of the public group, and Sales Engineers direct reports will not have access to these records unless they are explicitly granted by other means.

NEW QUESTION # 27

The sales manager in Japan have asked the sales manager in Australia to assist them with closing their deals. How are these requirements achieved?

- **A. Create ownership-based sharing rule.**
- B. Assign the sales manager View All on the opportunity object.
- C. Use opportunity teams to automatically add the sales manager as a team member.
- D. Use sharing set to give the sales manager access to the deals.

Answer: A

Explanation:

Explanation

Creating an ownership-based sharing rule is the best way to achieve the requirements. Ownership-based sharing rules allow administrators to automatically grant access to records owned by certain users or roles to other users or roles². This way, the sales manager in Australia can access the deals owned by the sales manager in Japan. Using sharing set, using opportunity teams, and assigning View All on the opportunity object are not options that can achieve the same result.

NEW QUESTION # 28

Universal Containers (UC) is a fast-growing company that sells containers globally. It has thousands of dealerships throughout the world where local dealers service containers. UC implemented a new Partner Community for its dealers. Each dealership has a dealer manager who manages the service agents. The community-sharing model is private.

What is the optimal option to give dealer managers visibility to customer cases only raised by their service agents?

- A. Create a sharing set to share cases created by service agents with their dealer manager.
- B. Create a sharing rule to share cases created by service agents with their dealer manager.
- C. Change external organization-wide default of case object to public read only.
- **D. Using the role hierarchy, the cases raised by service agents will be visible to their relevant dealer managers.**

Answer: D

NEW QUESTION # 29

Universal Containers maintains Job information in a Custom Object that contains sensitive information. The only users who should be able to view and edit Job records are the user who owns the record and all users in the Delivery profile. Which three platform sharing tools are required to support the above requirements?

Choose 3 answers.

- **A. Grant access Using Hierarchy sharing setting on the Job Object set to false.**
- **B. "Modify All" permission for Job Object on the Delivery Profile.**
- **C. Organization-Wide Default sharing setting of Private on the Job Object.**
- D. Criteria-Based sharing rule for the Delivery Profile on the Job Object.

- E. "View All Data" profile permission on the Delivery Profile.

Answer: A,B,C

Explanation:

Explanation

To support the requirement of allowing only the owner and users in the Delivery profile to view and edit Job records, you need to use three platform sharing tools:

Organization-Wide Default sharing setting of Private on the Job Object: This will restrict access to Job records to only the owner by default.

Grant access Using Hierarchy sharing setting on the Job Object set to false: This will prevent users above the owner in the role hierarchy from accessing Job records.

"Modify All" permission for Job Object on the Delivery Profile: This will grant users in the Delivery profile full access to all Job records regardless of ownership.

Criteria-Based sharing rule and "View All Data" profile permission are not required for this scenario.

Criteria-Based sharing rule would grant additional access to users who meet certain criteria, which is not necessary. "View All Data" profile permission would grant access to all data in the organization, which is too broad and may violate data security.

NEW QUESTION # 30

Universal Containers (UC) wants to reduce the amount of redundant leads entered into the system. UC also wants to ensure that leads are only edited/reassigned by the lead owner.

Which organization-wide default (OWD) approach should be recommended to help UC implement these requirements?

- A. Implement 2 Public Read-Only OWD on Lead.
- B. Implement a Public Read Only/Transfer OWD on Lead.
- C. Implement a Private OWD on Lead.

Answer: C

Explanation:

To ensure that only lead owners can edit or reassign their leads, the OWD for Lead should be set to Private. In a Private model:

* Only the owner (and users above the owner in the Role Hierarchy) can access and edit the record by default.

* Redundant lead entries can be minimized by enforcing validation rules or duplicate management logic.

* Option A: A Public Read Only/Transfer OWD does not restrict edit access to the lead owner, as anyone with appropriate permissions could edit or transfer the leads.

* Option B: Public Read-Only OWD does not align with the requirement to ensure only lead owners can edit or reassign leads.

* Option C (Correct): Private OWD ensures that only the lead owner has edit access, adhering to UC's requirements.
