## WGU Digital Forensics in Cybersecurity (D431/C840) Course Exam Sample Questions (Q67-Q72):

### NEW QUESTION # 67

Thomas received an email stating he needed to follow a link and verify his bank account information to ensure it was secure. Shortly after following the instructions, Thomas noticed money was missing from his account.

Which digital evidence should be considered to determine how Thomas' account information was compromised?

- A. Firewall logs
- B. Browser cache
- C. Bank transaction logs
- **D. Email messages**

**Answer: D**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

The email messages, including headers and content, contain information about the phishing attempt, such as sender details and embedded links. Analyzing these messages can help trace the source of the scam and determine the method used to deceive the victim.

\* Email headers provide metadata for tracking the origin.

\* Forensic examination of emails is fundamental in investigating social engineering and phishing attacks.

Reference: NIST SP 800-101 and forensic email analysis protocols recommend thorough email message examination in phishing investigations.

### NEW QUESTION # 68

The human resources manager of a small accounting firm believes he may have been a victim of a phishing scam. The manager clicked on a link in an email message that asked him to verify the logon credentials for the firm's online bank account. Which digital evidence should a forensic investigator collect to investigate this incident?

- A. Browser cache
- B. Network traffic logs
- C. Email headers
- D. System logs

**Answer: A**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

The browser cache stores recently accessed web pages, images, and cookies, which may include phishing site content and related activity. Investigators analyzing phishing attacks collect browser cache data to reconstruct the victim's web activity and detect malicious sites.

\* Cached web pages help corroborate victim statements and establish timelines.

\* Browser history and cache are volatile and must be preserved promptly.

Reference:According to NIST SP 800-101 and forensic guides, browser cache is critical in investigating phishing and web-based attacks.

### NEW QUESTION # 69

Which information is included in an email header?

- A. Sender's MAC address
- B. Content-Type
- C. Message-Digest
- D. Number of pages

**Answer: B**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

An email header contains metadata about the email including sender, receiver, routing information, and content details. The Content-Type header specifies the media type of the email body (e.g., text/plain, text/html, multipart/mixed), indicating how the email content should be interpreted.

\* Sender's MAC address is not typically included in email headers.

\* Number of pages is not relevant to email metadata.

\* Message-Digest is a term related to cryptographic hashes but is not a standard email header field.

Reference:RFC 5322 and forensic email analysis references outline that email headers contain fields like Content-Type describing the format of the message content, essential for proper parsing and forensic examination.

### NEW QUESTION # 70

Which tool should be used with sound files, video files, and image files?

- A. MP3Stego
- B. StegVideo
- C. Snow
- D. Stealth Files 4

**Answer: B**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

StegVideo is a steganographic tool designed to embed hidden messages within multimedia files such as sound, video, and image files, making it suitable for multi-media steganography.

\* Snow is mainly used for text-based steganography.

\* MP3Stego is specialized for MP3 audio files only.

\* Stealth Files 4 is a general steganography tool but less commonly referenced for multimedia.

Forensic and academic sources identify StegVideo as a tool for multimedia steganography, useful in complex digital investigations.

### NEW QUESTION # 71

A victim of Internet fraud fell for an online offer after using a search engine to find a deal on an expensive software purchase. Once the victim learned about the fraud, he contacted a forensic investigator for help.

Which digital evidence should the investigator collect?

- A. Whois records
- B. Email headers
- C. Virus signatures
- **D. Computer logs**

**Answer: D**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

In Internet fraud investigations, computer logs are critical because they provide a record of user activity, including browsing history, downloads, and system events. These logs can help establish a timeline, identify malicious access, and confirm fraudulent transactions.

\* Computer logs may include browser history, system event logs, and application logs that document the victim's interaction with the fraudulent offer.

\* Whois records help identify domain registration details but are secondary evidence.

\* Email headers are relevant if communication via email was part of the fraud but less critical than logs that show direct interaction.

\* Virus signatures are used in malware investigations, not directly relevant to fraud evidence collection.

Reference: According to guidelines by the International Journal of Digital Crime and Forensics and the SANS Institute, capturing logs is essential in building a case for Internet fraud as it provides objective data about the victim's system and activities.
