Valid CTAL_TM_001 exam dumps ensure you a high CTAL_TM_001 passing rate

If someone who can pass the exam, they can earn a high salary in a short time. If you decide to beat the exam, you must try our CTAL_TM_001 exam torrent, then, you will find that it is so easy to pass the exam. You only need little time and energy to review and prepare for the exam if you use our CTAL_TM_001 prep torrent as the studying materials. So it is worthy for them to buy our CTAL_TM_001 learning prep. We provide the free demo of our CTAL_TM_001 training guide so as to let you have a good understanding of our CTAL_TM_001 exam questions before your purchase.

ISTQB Certified Tester Advanced Level - Test Manager Sample Questions

(Q153-Q158):

NEW QUESTION # 153

Your last project was released three months ago and used a risk-based approach. In production, a number of serious failures in low risk areas have occurred.

What is the most important lesson to be learned from this information? [2]

- A. A broader cross-functional team should contribute to the risk analysis.
- B. Future projects should test the lower risk areas first.
- C. The "lessons learned" session should have been conducted prior to deployment.
- D. The project manager should have set stakeholder expectations for serious failures.

Answer: A

Explanation:

The most important lesson to be learned from this information is that a broader cross-functional team should contribute to the risk analysis. This is because the risk analysis is the process of identifying, assessing, and prioritizing the risks that may affect the quality of the system, and allocating testing resources accordingly. A broader cross-functional team can provide different perspectives, expertise, and experience to the risk analysis, and help to identify and evaluate the risks more accurately and comprehensively. This can reduce the likelihood of overlooking or underestimating some risks, and improve the effectiveness and efficiency of the risk-based testing approach. NEW QUESTION # 154

When closing out a defect report, which of the following developer commentaries is most likely to motivate a tester?

- A. Rejected - system is functioning as designed
- B. Fixed - minor usability issue, wasn't worth the time to fix it
- C. Fixed - error in build caused compatibility issues
- D. Rejected - would take too long to fix

Answer: C

Explanation:

This developer commentary is most likely to motivate a tester because it acknowledges the tester's contribution in finding a defect that affected the product's functionality and compatibility. It also shows that the developer took the defect seriously and fixed it promptly. This commentary demonstrates respect and appreciation for the tester's work and fosters a collaborative relationship between the developer and the tester. 21 inspirational quotes about software testing What motivates you - Take the Motivation Test References:

NEW QUESTION # 156

You are a new Test Manager on a maintenance release for an existing mature product that is expected to be retired in the not too distant future. The previous release had utilized a performance regression test suite written in an in-house custom tool using the same programming language as the product itself. This suite will most likely require tweaking to ensure it works with the new version of the product. While there are several members in the performance testing team, the original author of the performance testing tool has moved on to another company, and none of the remaining staff have a great deal of familiarity with the performance test scripts used to test this product.

How would you recommend this scenario be addressed? [3]

- A. Leverage the development team to fill any knowledge gaps in the in-house tool.
- B. Retire the in-house tool and switch to a vendor supported tool for performance testing.
- C. Make the in-house tool available to the open source community.
- D. Reduce the scope of the product testing to exclude performance testing.

Answer: A

Explanation:

The best option to address this scenario is to leverage the development team to fill any knowledge gaps in the in-house tool. This option allows the test team to reuse the existing performance test suite and avoid the risks and costs of switching to a new tool or excluding performance testing altogether. The development team can provide support and guidance to the test team on how to use and modify the in-house tool, since it is written in the same programming language as the product itself. This option also preserves the intellectual property of the organization and does not expose the in-house tool to the open source community. NEW QUESTION # 157

Your current project is delivering a warehouse management system for use in distribution centres, you are writing a test plan to address acceptance testing. You need to determine which stakeholders would be interested in receiving regular reports covering the progress of test execution against agreed schedule and budget. Which roles would be MOST interested in these reports?

- A. Project manager
- B. Lead developer
- C. Operations manager
- D. Business owner
- E. System users

Answer: A,C,D

Explanation:

Acceptance testing progress against schedule and budget is a key interest for business stakeholders such as operations, business owner, and the project manager.

"Business stakeholders, such as business owners, project managers and operations managers, are usually interested in summary test progress and conformance to agreed acceptance criteria and schedule." (Source: ISTQB Advanced Level Test Manager Syllabus 2012, Section 1.4.2) Therefore, B, C and E is the correct option.

NEW QUESTION # 158

.....

This kind of polished approach is beneficial for a commendable grade in the ISTQB Certified Tester Advanced Level - Test Manager (CTAL_TM_001) exam. While attempting the exam, take heed of the clock ticking, so that you manage the ISTQB CTAL_TM_001 questions in a time-efficient way. Even if you are completely sure of the correct answer to a question, first eliminate the incorrect ones, so that you may prevent blunders due to human error.
