In addition, candidates should be able to write code that optimizes the performance of AWS services and should be able to troubleshoot common issues that may arise in AWS-based applications.

Amazon AWS Certified Developer Associate Exam (DVA-C02) Sample Questions (Q98-Q103):

NEW QUESTION # 98

A developer is building an application that will run on Amazon EC2 instances. The application needs to connect to an Amazon DynamoDB table to read and write records. The security team must periodically rotate access keys. Which approach will satisfy these requirements?

- A. Create an IAM role with read and write access to the DynamoDB table. Generate access keys for the user and store the access keys in the application as environment variables.
- B. Create an IAM role, configure read and write access for the DynamoDB table, and attach to the EC2 instances.
- C. Create an IAM user with read and write access to the DynamoDB table. Store the user name and password in the application and generate access keys using an AWS SDK.
- **D. Create an IAM user with read and write access to the DynamoDB table. Generate access keys for the user and store the access keys in the application as a credentials file.**

Answer: D

NEW QUESTION # 99

Company B provides an online image recognition service and utilizes SQS to decouple system components for scalability. The SQS consumers poll the imaging queue as often as possible to keep end-to-end throughput as high as possible. However, Company B is realizing that polling in tight loops is burning CPU cycles and increasing costs with empty responses. How can Company B reduce the number of empty responses?

- A. Set the imaging queue visibility Timeout attribute to 20 seconds
- B. Set the DelaySeconds parameter of a message to 20 seconds
- C. Set the imaging queue MessageRetentionPeriod attribute to 20 seconds
- **D. Set the Imaging queue ReceiveMessageWaitTimeSeconds attribute to 20 seconds**

Answer: D

NEW QUESTION # 100

A developer must ensure that the IAM credentials used by an application in Amazon EC2 are not misused or compromised. What should the developer use to keep user credentials secure?

- A. Environment variables
- B. AWS credentials file
- **C. Instance profile credentials**
- D. Command line options

Answer: C

NEW QUESTION # 101

A security engineer is responsible for providing secure access to AWS resources for thousands of developers in a company's corporate identity provider (IdP). The developers access a set of AWS services from their corporate premises using IAM credentials. Due to the volume of requests for provisioning new IAM users, it is taking a long time to grant access permissions. The security engineer receives reports that developers are sharing their IAM credentials with others to avoid provisioning delays. This causes concern about overall security for the security engineer.

Which actions will meet the program requirements that address security?

- A. Create a VPN tunnel between the corporate premises and the VPC. Allow permissions to all AWS services only if it originates from corporate premises.
- B. Create multiple IAM roles for each IAM user. Ensure that users who use the same IAM credentials cannot assume the same IAM role at the same time.
- C. Create an Amazon CloudWatch alarm for AWS CloudTrail events. Create a metric filter to send a notification when the same set of IAM credentials is used by multiple developers.
- **D. Create a federation between AWS and the existing corporate IdP. Leverage IAM roles to provide federated access to AWS resources.**

Answer: D

NEW QUESTION # 102

The Developer for a retail company must integrate a fraud detection solution into the order processing solution. The fraud detection solution takes between ten and thirty minutes to verify an order. At peak, the web site can receive one hundred orders per minute. What is the most scalable method to add the fraud detection solution to the order processing pipeline?

- **A. Write all new orders to Amazon DynamoDB. Configure DynamoDB Streams to include all new orders. Subscribe a Lambda function to automatically read batches of records from the Kinesis Stream. The Lambda function includes the fraud detection software and will update the order with a pass or fail status.**
- B. Add all new orders to an Amazon SQS queue. Configure a fleet of 10 EC2 instances spanning multiple AZs with the fraud detection solution installed on them to pull orders from this queue. Update the order with a pass or fails status.
- C. Add all new orders to an Amazon Kinesis Stream. Subscribe a Lambda function to automatically read batches of records from the Kinesis Stream. The Lambda function includes the fraud detection software and will update the order with a pass or fail status.
- D. Add all new orders to an SQS queue. Configure an Auto Scaling group that uses the queue depth metric as its unit of scale to launch a dynamically-sized fleet of EC2 instances spanning multiple AZs with the fraud detection solution installed on them to pull orders from this queue. Update the order with a pass or fails status.

Answer: A
