Frenquent C_TS422_2023 Update, New C_TS422_2023 Cram Materials

P.S. Free 2025 SAP C_TS422_2023 dumps are available on Google Drive shared by ITExamSimulator:
https://drive.google.com/open?id=1EdgFKcM9xPMs50ucgW0DcHOcV4wqXAgk

By offering the most considerate after-sales services of C_TS422_2023 exam torrent materials for you, our whole package services have become famous and if you hold any questions after buying SAP S/4HANA Cloud Private Edition - Production Planning and Manufacturing prepare torrent, get contact with our staff at any time, they will solve your problems with enthusiasm and patience. They do not shirk their responsibility of offering help about C_TS422_2023 Test Braindumps for you 24/7 that are wary and considerate for every exam candidate's perspective. Understanding and mutual benefits are the cordial principles of services industry. We know that tenet from the bottom of our heart, so all parts of service are made due to your interests.

If you are worried for preparation of your C_TS422_2023 exam, so stop distressing about it because you have reached to the reliable source of your success. ITExamSimulator is the ultimate solution to your all SAP Designing and Implementing Cloud Data Platform Solutions related problem. It provides you with a platform which enables you to clear your C_TS422_2023 Exam. ITExamSimulator provides you C_TS422_2023 exam questions which is reliable and offers you a gateway to your destination.

C_TS422_2023 Exam Collection & C_TS422_2023 Study Materials & C_TS422_2023 Valid Braindumps

In accordance with the actual exam, we provide the latest C_TS422_2023 exam dumps for your practices. With the latest C_TS422_2023 test questions, you can have a good experience in practicing the test. Moreover, you have no need to worry about the price, we provide free updating for one year and half price for further partnerships, which is really a big sale in this field. After your payment, we will send the updated C_TS422_2023 Exam to you immediately and if you have any question about updating, please leave us a message on our C_TS422_2023 exam questions.

SAP C_TS422_2023 Exam Syllabus Topics:

Topic	Details
Topic 1	• Lean Manufacturing in SAP S • 4HANA: This section covers repetitive manufacturing master data, line load planning, and Kanban systems.
Topic 2	• Material Requirements Planning in SAP S • 4HANA: This part of the exam covers an examination of planning strategies, tools, and long-term planning concepts. Overview of MRP fundamentals and lot size procedures.

Topic 3	- Capacity Planning in SAP S - 4HANA: This section covers a discussion of SAP S - 4HANA best practices, SAP HANA database concept, SAP Fiori user experience, and embedded analytics capabilities.
Topic 4	- Process Orders in SAP S - 4HANA: This section covers an introduction to process order components, processing, and relevant master data objects. Overview of Good Manufacturing Practices (GMP) features.
Topic 5	- Master Data in SAP S - 4HANA: This section covers the exploration of crucial production-related master data elements, with emphasis on bill of material, routing, and production version.
Topic 6	- Introduction to SAP S - 4HANA Production Planning: This section covers an overview of production planning components, functions, and planning approaches. Exploration of emerging trends.
Topic 7	- Production Orders in SAP S - 4HANA: This section covers BOM item categorization, order status management, availability checks, routing selection, order type setup, and material handling processes.
Topic 8	- Advanced Planning in SAP S - 4HANA: This section includes an overview of advanced planning fundamentals and master data. Explanation of key tools and processes. Discussion of planning evaluation concepts.

SAP S/4HANA Cloud Private Edition - Production Planning and Manufacturing Sample Questions (Q32-Q37):

NEW QUESTION # 32
Your project uses process orders for the production of liquid chemicals. What can you define to ensure that production flow only happens in suitable and physically connected tanks? Note: There are 2 correct answers to this question.

- A. Resource network
- B. Resource selection
- C. Resource matrix
- D. Resource hierarchy

Answer: A,B

Explanation:
A resource network is a business object in PP/DS that defines the allowed directed connections between two or more resources. A directed connection means that the connection from Resource 1 to Resource 2 is not the same as the inverse connection from Resource 2 to Resource 1. You use this object to model existing production constraints more precisely, with the objective of creating a finite and technically feasible production schedule. Resource networks simplify the modeling of resource restrictions for consecutive operations or orders1 A resource selection is a business object in PP/DS that defines the criteria for selecting a suitable resource for an operation or an order. You use this object to specify the characteristics, attributes, and capacities of the resources that can be used for a particular production process. Resource selection allows you to optimize the resource utilization and reduce the setup times and costs2 A resource matrix is a business object in PP/DS that defines the relationships between different resources based on their characteristics and attributes. You use this object to determine the setup times and costs for changing from one resource to another. Resource matrix allows you to model the setup effort and expense more accurately and improve the production efficiency3 A resource hierarchy is a business object in PP/DS that defines the structure and sequence of resources that are used for a production process. You use this object to represent the logical and physical dependencies of the resources and to control the scheduling and sequencing of the operations or orders. Resource hierarchy allows you to model the production flow and capacity more realistically and ensure the technical feasibility of the production plan.

NEW QUESTION # 33

How would you define pegging in the context of Advanced Planning?

- A. An evaluation to identify material or capacity shortages in the billofmaterial structure after the production planning run
- B. An evaluation to identify overstock situations in the balance between the receipt the issue elements after the production planning run
- C. An evaluation that is ordered according to the network structure of all related products represents the coverage of issue elements with receipt elements stock
- D. An evaluation that is ordered according to the billofmaterial structure of all related products represents the relationship between the receipt the issue elements

Answer: D

NEW QUESTION # 34

You want to reduce planning efforts for B and C materials. Which planning procedure do you recommend?

- A. Manual Planning Without Check
- B. Advanced Planning
- C. Material Requirements Planning
- D. Consumption-Based Planning

Answer: D

Explanation:
Consumption-based planning is a planning procedure that uses past consumption data to calculate the future requirements of materials. It does not consider the dependent requirements of higher-level materials, but only the independent requirements from sales orders, forecasts, or stock transfers. Consumption-based planning is suitable for B and C materials, which have low value, low demand variability, and high availability. Consumption-based planning reduces the planning efforts for these materials, as it does not require the maintenance of BOMs, routings, or production versions. Consumption-based planning can be further divided into reorder point planning, forecast-based planning, and time-phased planning, depending on the method of determining the reorder point and the lot size12 Reference:

SAP S/4HANA Production Planning and Manufacturing Certification Guide, Chapter 3: Material Requirements Planning, Section 3.1: Planning Procedures, Page 67

NEW QUESTION # 35

You are a consultant on an SAP S/4HANA Cloud Greenfield project.
Which of the following aspects should you focus on to achieve maintain clean core data quality? Note: There are 2 correct answers to this question.

- A. Timeliness
- B. Efficiency
- C. Accuracy
- D. Stability

Answer: B,D

NEW QUESTION # 36

which actions does the system perform by default when you save a confirmation for a finished product in repetitive manufacturing? Note: There are 3 Correct answers to this question.

- A. Reduction of associated capacity requirements
- B. posting of goods receipt for the product
- C. Posting of production costs to the production cost collector

- D. Material staging for next order in sequence
- E. Archiving of document for assembly scrap

Answer: A,B,C

Explanation:

When you save a confirmation for a finished product in repetitive manufacturing, the system performs the following actions by default12:

Posting of production costs to the production cost collector: The system calculates the actual costs for the confirmed quantity and posts them to the production cost collector assigned to the product. The production cost collector is a cost object that collects the costs for all confirmations of a product in a plant for a period.

Posting of goods receipt for the product: The system posts the confirmed quantity as a goods receipt to the warehouse. The product is valuated at the standard price defined in the material master record. The difference between the standard price and the actual costs is posted to a price difference account.

Reduction of associated capacity requirements: The system reduces the capacity requirements for the work center where the confirmation was made. The capacity requirements are calculated based on the confirmed quantity and the standard values for setup, machine, and labor time in the routing.
