i.e. web-based and desktop are customizable, mimic Lpi 010-160 real exam scenarios, provide results instantly, and help to overcome mistakes.

Lpi Linux Essentials Certificate Exam - version 1.6 Sample Questions (Q26-Q31):

NEW QUESTION # 26

Which of the following statements is true about Free Software?

- A. It only runs on Linux.
- B. It must always be available free of charge.
- C. It may be modified by anyone using it.
- D. It is only distributed as a compiled binary.
- E. It is developed by volunteers only.

Answer: C

Explanation:

The correct statement about Free Software is that it may be modified by anyone using it. This is one of the four essential freedoms of Free Software, which are: the freedom to run the program as you wish, for any purpose; the freedom to study how the program works, and change it so it does your computing as you wish; the freedom to redistribute copies so you can help your neighbor; and the freedom to distribute copies of your modified versions to others¹. Access to the source code is a precondition for these freedoms¹.

The other statements are false for the following reasons:

Free Software is not developed by volunteers only. It can be developed by anyone, including individuals, companies, organizations, or communities. Some Free Software developers are paid for their work, while others do it as a hobby or for social benefit¹.

Free Software does not have to be available free of charge. It can be sold or given away for any price. The term "free" refers to the users' freedom, not the price of the software¹. However, Free Software users have the freedom to redistribute copies, so they can obtain the software at no charge from someone who has a copy¹.

Free Software does not only run on Linux. It can run on any operating system that supports it, such as Windows, MacOS, BSD, or Android. Linux is an example of a Free Software operating system, but not the only one¹.

Free Software is not only distributed as a compiled binary. It can also be distributed as source code, or both. In fact, Free Software must provide access to the source code, otherwise the users cannot study or modify the software¹.

NEW QUESTION # 27

FILL BLANK

What keyword is used in a shell script to begin a loop? (Specify one keyword only, without any additional information.)

Answer:

Explanation:

for

NEW QUESTION # 28

Which of the following commands sets the variable USERNAME to the value bob?

- A. set USERNAME bob
- B. var USERNAME=bob
- C. USERNAME<=bob
- D. \$USERNAME==bob
- E. **USERNAME=bob**

Answer: E

Explanation:

Explanation

The correct command to set the variable USERNAME to the value bob is USERNAME=bob. This command assigns the string

bob to the variable name USERNAME, using the equal sign (=) as the assignment operator.

There is no space around the equal sign, and the variable name and value are case-sensitive. This command sets a shell variable, which is only valid in the current shell session. To make the variable an environment variable, which can be inherited by child processes and subshells, you need to use the export command, such as export USERNAME=bob. The other commands are not valid for setting variables in Linux. The set command is used to set orunset shell options and positional parameters, not variables. The \$ sign is used to reference the value of a variable, not to assign it. The == sign is used for comparison, not assignment. The var keyword is not used in Linux, but in some other programming languages. The <= sign is used for redirection, not assignment.
