## Exam AWS-SysOps Quiz - AWS-SysOps Verified Answers

In the era of information, everything around us is changing all the time, so do the AWS-SysOps exam. But you don't need to worry it. We take our candidates' future into consideration and pay attention to the development of our AWS Certified SysOps Administrator - Associate study training dumps constantly. Free renewal is provided for you for one year after purchase, so the AWS-SysOps Latest Questions won't be outdated. The latest AWS-SysOps latest questions will be sent to you email, so please check then, and just feel free to contact with us if you have any problem. Our reliable AWS-SysOps exam material will help pass the exam smoothly.

## Amazon AWS Certified SysOps Administrator - Associate Sample Questions (Q774-Q779):

### NEW QUESTION # 774

When the AWS Cloud infrastructure experiences an event that may impact an organization, which AWS service can be used to see which of the organization's resources are affected?

- A. AWS Trusted Advisor
- **B. AWS Personal Health Dashboard**
- C. AWS Systems Manager
- D. AWS Service Health Dashboard

**Answer: B**

### NEW QUESTION # 775

When performing an audit on an S3 bucket, a SysOps Administrator discovered that Amazon CloudWatch reports that there are 12,345,678 objects in the bucket, whereas the AWS CLI reports that there are 98,765,432 objects in the same bucket. Which Amazon S3 feature can the SysOps Administrator use to obtain the definitive answer to the number of objects in the bucket?

- A. Amazon S3 analytics
- B. AWS Management Console
- **C. Amazon S3 inventory**
- D. Object tags

**Answer: C**

Explanation:

<https://stackoverflow.com/questions/2862617/how-can-i-tell-how-many-objects-ive-stored-in-an-s3-bucket>

### NEW QUESTION # 776

A user is using CloudFormation to launch an EC2 instance and then configure an application after the instance is launched. The user wants the stack creation of ELB and AutoScaling to wait until the EC2 instance is launched and configured properly. How can the user configure this?

- A. The user can use the HoldCondition resource to wait for the creation of the other dependent resources
- **B. The user can use the WaitCondition resource to hold the creation of the other dependent resources**
- C. The user can use the DependentCondition resource to hold the creation of the other dependent resources
- D. It is not possible that the stack creation will wait until one service is created and launched

**Answer: B**

Explanation:

AWS CloudFormation is an application management tool which provides application modelling, deployment, configuration, management and related activities. AWS CloudFormation provides a WaitCondition resource which acts as a barrier and blocks the creation of other resources until a completion signal is received from an external source, such as a user application or management system.

### NEW QUESTION # 777

A user has launched two EBS backed EC2 instances in the US-East-1a region. The user wants to change the zone of one of the instances. How can the user change it?

- **A. Create an AMI of the running instance and launch the instance in a separate AZ**
- B. Stop one of the instances and change the availability zone
- C. The zone can only be modified using the AWS CLI
- D. From the AWS EC2 console, select the Actions - > Change zones and specify new zone

**Answer: A**

Explanation:

With AWS EC2, when a user is launching an instance he can select the availability zone (AZ) at the time of launch. If the zone is not selected, AWS selects it on behalf of the user. Once the instance is launched, the user cannot change the zone of that instance unless he creates an AMI of that instance and launches a new instance from it.

### NEW QUESTION # 778

A user has enabled instance protection for his Auto Scaling group that has spot instances. If Auto Scaling wants to terminate an instance in this Auto Scaling group due to a CloudWatch trigger unrelated to bid price, what will happen?

- A. Auto Scaling will notify the user for the next action
- B. Auto Scaling overwrites the instance termination attribute and terminates the instances
- C. Auto Scaling will remove the instance from the Auto Scaling Group
- **D. The EC2 instance will not be terminated since instance protection from scale-in is enabled.**

**Answer: D**

Explanation:

Explanation

Auto Scaling protects instances from termination during scale-in events. This means that Auto Scaling instance protection will receive the CloudWatch trigger to delete instances, and delete instances in the Auto Scaling group that do not have instance protection enabled. However, instance protection won't protect Spot instance termination triggered due to market price exceeding bid price.

## NEW QUESTION # 779

.....

We are so popular for that we have a detailed and perfect customer service system. Firstly, only 5 to 10 minutes after the customer's online payment of AWS-SysOps actual exam is successful, you can receive an email from the customer service and immediately start learning. We also have dedicated staff to check and update AWS-SysOps Exam Questions every day, so you can get the latest information of AWS-SysOps exam materials whenever you buy it. Secondly, we provide 24-hour round-the-clock service to customers. We can solve any problems about AWS-SysOps study materials for you whenever and wherever you need it.
