

# AZ-700 Exam Material & New AZ-700 Dumps Ppt

P.S. Free & New AZ-700 dumps are available on Google Drive shared by Actual4Exams: <https://drive.google.com/open?id=1iXP8EhVbyr2MntiXaXXxm9gqby-3ZDiQ>

As the quick development of the world economy and intense competition in the international, the world labor market presents many new trends: company's demand for the excellent people is growing. As is known to us, the AZ-700 certification is one mainly mark of the excellent. If you don't have enough ability, it is very possible for you to be washed out. On the contrary, the combination of experience and the AZ-700 Certification could help you resume stand out in a competitive job market.

By passing the Microsoft AZ-700 exam, IT professionals can demonstrate their expertise in designing and implementing Azure networking solutions. Designing and Implementing Microsoft Azure Networking Solutions certification can be useful for professionals seeking to advance their careers in cloud computing, and for organizations looking to hire skilled Azure networking professionals. With a Microsoft Azure certification, professionals can gain a competitive edge in the job market and increase their earning potential.

Microsoft AZ-700 exam is intended for IT professionals who have a deep understanding of Azure networking technologies and services, including virtual networks, VPNs, load balancers, and network security groups. Candidates for this certification should also have experience working with Azure services such as Azure Active Directory, Azure DNS, and Azure Traffic Manager. AZ-700 Exam is typically taken by network architects, network engineers, and IT professionals who are responsible for designing and implementing Azure networking solutions for their organizations.

## New AZ-700 Dumps Ppt | AZ-700 Relevant Answers

We are going to promise that we will have a lasting and sustainable cooperation with customers who want to buy the AZ-700 study materials from our company. We can make sure that our experts and professors will try their best to update the study materials in order to help our customers to gain the newest and most important information about the AZ-700 Exam. If you decide to buy our study materials, you will never miss any important information. In addition, we can promise the updating system is free for you.

Microsoft AZ-700 Exam covers a wide range of topics related to Azure networking solutions, including virtual network design, Azure ExpressRoute, VPN Gateway, Azure Firewall, Network Security Groups, and Azure Load Balancer. You will also be tested on your knowledge of hybrid networking, network security, and network monitoring and troubleshooting.

## Microsoft Designing and Implementing Microsoft Azure Networking Solutions Sample Questions (Q222-Q227):

### NEW QUESTION # 222

You have an Azure Traffic Manager parent profile named TM1. TM1 has two child profiles named TM2 and TM3.

TM1 uses the performance traffic-routing method and has the endpoints shown in the following table.

TM2 uses the weighted traffic-routing method with MinChildEndpoint = 2 and has the endpoints shown in the following table.

TM3 uses priority traffic-routing method and has the endpoints shown in the following table.

The App2, App4, and App6 endpoints have a degraded monitoring status.

To which endpoint is traffic directed? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point

**Answer:**

Explanation:

Explanation:

Reference:

<https://docs.microsoft.com/en-us/azure/traffic-manager/traffic-manager-nested-profiles> Traffic from West Europe:

Based on TM1 table, West Europe will trigger TM2. However, as the MinChildEndpoint is set to 2, and App4 is degraded (down), the entire TM2 will not be considered available.

This goes back to the origin TM1 that uses performance traffic-routing method, which means the closest location is App1 and naturally be the next best performance instance.

Hence, Answer = App1

Traffic from West US:

Based on TM1 table, West US will trigger TM3. However, both App2 and App6 were degraded (down), so none of them can be considered.

This goes back to the original TM1 that uses performance traffic-routing method, from TM1, the other 2 US locations would be App2 and App3. But App2 we know it's already degraded (unavailable), hence the only option would be App3.

Answer = App3

**NEW QUESTION # 223**

**SIMULATION**

**Task 7**

You plan to deploy 100 virtual machines to subnet4-1. The virtual machines will NOT be assigned a public IP address. The virtual machines will call the same API, which is hosted by a third party. The virtual machines will make more than 10,000 calls per minute to the API.

You need to minimize the risk of SNAT port exhaustion. The solution must minimize administrative effort.

**Answer:**

Explanation:

See the Explanation below for step by step instructions

Explanation:

To minimize the risk of SNAT port exhaustion for your 100 virtual machines in subnet4-1, while ensuring minimal administrative effort, you can use an Azure NAT Gateway. This service provides scalable and resilient outbound connectivity for virtual networks, dynamically allocating SNAT ports to avoid exhaustion.

Step-by-Step Solution

Step 1: Create a NAT Gateway

Navigate to the Azure Portal.

Search for "NAT gateways" and select it.

Click on "Create".

Enter the following details:

Subscription: Select your subscription.

Resource Group: Select an existing resource group or create a new one.

Name: Enter a name for the NAT gateway (e.g., NATGateway-Subnet4-1).

Region: Select the region where your virtual network is located.

Click on "Next: Outbound IP".

Step 2: Configure Outbound IP Addresses

Choose whether to use existing public IP addresses or create new ones.

If creating new ones, click on "Add new" and configure the new public IP addresses.

Click on "Next: Subnet".

Step 3: Associate the NAT Gateway with Subnet4-1

Click on "Associate subnet".

Select the virtual network that contains subnet4-1.

Select subnet4-1 from the list of subnets.

Click on "OK".

Step 4: Review and Create

Review your settings to ensure everything is correct.

Click on "Review + create" and then "Create".

Explanation:

Azure NAT Gateway: This service provides outbound connectivity for virtual networks, dynamically allocating SNAT ports across all VM instances within a subnet. This dynamic allocation helps prevent SNAT port exhaustion, especially in scenarios with high outbound connection volumes<sup>12</sup>.

Dynamic SNAT Port Allocation: Unlike static allocation methods, NAT Gateway dynamically allocates SNAT ports based on demand, ensuring efficient use of available ports and reducing the risk of exhaustion<sup>2</sup>.

By following these steps, you can ensure that your 100 virtual machines in subnet4-1 can make the necessary API calls without running into SNAT port exhaustion, all while minimizing administrative effort.

#### NEW QUESTION # 224

You have two Azure virtual networks named Vnet1 and Vnet2 in an Azure region that has three availability zones.

You deploy 12 virtual machines to each virtual network, deploying four virtual machines per zone. The virtual machines in Vnet1 host an app named App1. The virtual machines in Vnet2 host an app named App2.

You plan to use Azure Virtual Network NAT to implement outbound connectivity for App1 and App2.

You need to identify the minimum number of subnets and Virtual Network NAT instances required to meet the following requirements:

\* A failure of two zones must NOT affect the availability of either App1 or App2.

\* A failure of two zones must NOT affect the outbound connectivity of either App1 or App2.

What should you identify? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

**Answer:**

Explanation:

Explanation:

Reference:

<https://docs.microsoft.com/en-us/azure/virtual-network/nat-gateway/nat-overview>

#### NEW QUESTION # 225

You have an Azure subscription that contains the virtual networks shown in the following table.

The subscription contains the virtual machines shown in the following table.

You create a load balancer named LB1 that has the following configurations:

\* SKU: Basic

\* Type: Internal

\* Subnet: Subnet12

\* Virtual network VNet1

For each of the following statements, select Yes if the statement is true. Otherwise, select No. NOTE: Each correct selection is worth one point.

**Answer:**

Explanation:

Explanation:

#### NEW QUESTION # 226

You have an Azure environment shown in the following exhibit.

Use the drop-down menus to select the answer choice that completes each statement based on the information presented in the graphic.

NOTE: Each correct selection is worth one point.

**Answer:**

Explanation:
