NEW QUESTION # 90

A developer needs to retrieve data from an external system that stores policy data. The external system supports REST APIs to access and update the policies. Due to the volume of the policy data and peak hours of business, calls to the REST APIs sometimes take longer than expected to respond.

The developer creates an Integration Procedure to retrieve the policy data for use in an OmniScript.

Given the external system's known performance issues, which two configurations should be used to implement the call to the external system?

Choose 2 answers

- A. Check the Chain On Step checkbox on the HTTP Action in the Integration Procedure

- C. Check the Chainable checkbox on the Integration Procedure Action in the OmniScript
- D. Set the Timeout property on the HTTP Action in the Integration Procedure

The Timeout property on the HTTP Action in the Integration Procedure specifies how long to wait for a response from the external system before throwing an error.
