- A. Configure Internet Information Services (IIS) on the StoreFront server to use HTTPS.
- B. Configure Cloud Connectors to allow unsecured connections.
- **C. Change transport type to HTTPS in the StoreFront store DDC list.**

StoreFront and Citrix Cloud4.

NEW QUESTION # 183

Scenario: A Citrix Administrator wants to add more machines to an existing Delivery Group. The Delivery Group contains machines with Virtual Delivery Agent (VDA) 2402 LTSR installed. In the Site, there is a machine catalog with available machines, but Virtual Delivery Agent 2203 LTSR is installed. What will happen if the administrator tries to add the available machines to the Delivery Group using Citrix Studio?

- A. The machines will automatically upgrade the VDA component to version 7.15 during the join process.
- B. The machines will be joined, but features included after version 7.6 will be unavailable.
- C. The machines will become unregistered after joining the Delivery Group.
- D. The machines will NOT be visible and an error message will appear.

Answer: B

Explanation:

When you add machines with an older VDA version (2203 LTSR) into a Delivery Group whose functional level is determined by the newer VDA (2402 LTSR), Studio will allow the join, but the Delivery Group's functional level drops to the earliest VDA version present. Consequently, any features introduced after that older VDA version are not available in that group.

Which feature can a Citrix Administrator use to create a consistent set of front-end SSL parameters across multiple SSL virtual servers?

- A. SSL Bridge
- B. SSL Profile
- C. SSL Offload
- D. SSL Policy

Answer: B

Explanation:

A SSL profile is a collection of SSL settings that define the SSL behavior of a virtual server. A Citrix Administrator can use SSL profiles to apply the same SSL settings to multiple SSL virtual servers, which simplifies the configuration and management of SSL parameters.
