PL-400 Valid Exam Pdf | PL-400 Passleader Review

Candidates all around the globe use their full potential only to get Microsoft PL-400 certification. Once the candidate is a Microsoft certified, he gets multiple good career opportunities in the Microsoft sector. To pass the PL-400 Certification Exam a candidate needs to be updated and reliable Microsoft Power Platform Developer (PL-400) prep material.

Microsoft Power Platform Developer Sample Questions (Q370-Q375):

NEW QUESTION # 370

You work for a staffing company that helps employees fill temporary jobs. Available temporary jobs are categorized and listed on a secure area of the company's website.

The company wants to eliminate manual work that relates to job and candidate management. The company plans to invite employers with available jobs and job candidates to view jobs by sending personalized invitations. The company identifies the following requirements:

Human resources team members from the staffing company must be able to access the jobs listing and post available positions.

Employers seeking temporary employees must also be able to access the jobs listing and post available positions.

Approved job candidates must be notified about new positions for which they are qualified.

Approved job candidate must have an option to accept a job assignment directly from a notification.

You need to perform a gap analysis against the features and capabilities of the Power Platform.

Which features should you implement? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Requirement	Feature
Create the job listings portal.	<div style="border: 1px solid gray; padding: 2px;">▼</div> <ul style="list-style-type: none"> Custom self-service portal for employers and a custom page for job candidates Custom self-service portal for both employers and job candidates Portal for job candidates and a custom self-service portal for employers Portal from blank for job candidates and employers
Create an app that lists available positions.	<div style="border: 1px solid gray; padding: 2px;">▼</div> <ul style="list-style-type: none"> Canvas app with push notifications Model-driven app with push notifications Portal app with push notifications
Create the app for employers who are seeking temporary employees.	<div style="border: 1px solid gray; padding: 2px;">▼</div> <ul style="list-style-type: none"> Entity form defined on the job custom entity Webform with target set to the job custom entity Web page defined on the job custom entity Web step with target set to the job custom entity
Create invitation parameters for job candidates.	<div style="border: 1px solid gray; padding: 2px;">▼</div> <ul style="list-style-type: none"> Configure a value for the Assigned to Account option only. Configure a value for the Execute Workflow on Redeeming Contact option only. Configure values for Assigned to Account and Execute Workflow on Redeeming Contact. Leave both Assigned to Account and Execute Workflow on Redeeming Contact empty.
Create invitation parameters for approved job candidates.	<div style="border: 1px solid gray; padding: 2px;">▼</div> <ul style="list-style-type: none"> Configure a value for the Assigned to Account option only. Configure a value for the Execute Workflow on Redeeming Contact option only. Configure values for Assigned to Account and Execute Workflow on Redeeming Contact. Leave both Assigned to Account and Execute Workflow on Redeeming Contact empty.

Answer:

Explanation:

Requirement

Feature

Create the job listings portal.

- Custom self-service portal for employers and a custom page for job candidates
- Custom self-service portal for both employers and job candidates
- Portal for job candidates and a custom self-service portal for employers
- Portal from blank for job candidates and employers

Create an app that lists available positions.

- Canvas app with push notifications
- Model-driven app with push notifications
- Portal app with push notifications

Create the app for employers who are seeking temporary employees.

- Entity form defined on the job custom entity
- Webform with target set to the job custom entity
- Web page defined on the job custom entity
- Web step with target set to the job custom entity

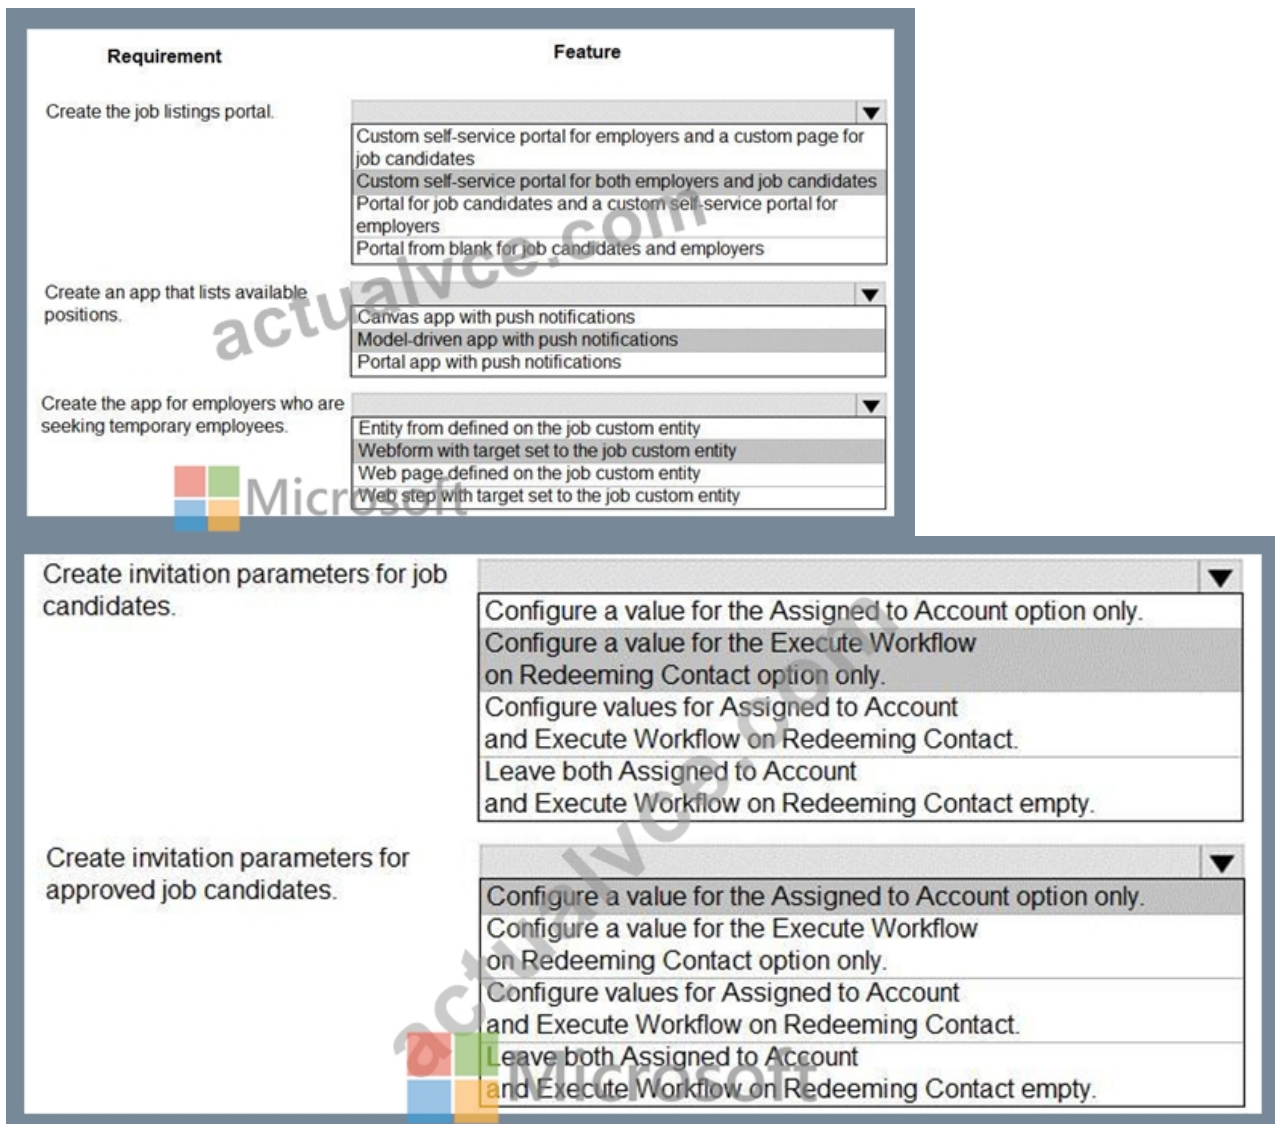

Create invitation parameters for job candidates.

- Configure a value for the Assigned to Account option only.
- Configure a value for the Execute Workflow on Redeeming Contact option only.
- Configure values for Assigned to Account and Execute Workflow on Redeeming Contact.
- Leave both Assigned to Account and Execute Workflow on Redeeming Contact empty.

Create invitation parameters for approved job candidates.

- Configure a value for the Assigned to Account option only.
- Configure a value for the Execute Workflow on Redeeming Contact option only.
- Configure values for Assigned to Account and Execute Workflow on Redeeming Contact.
- Leave both Assigned to Account and Execute Workflow on Redeeming Contact empty.

Explanation

Box 1: Custom self-service portal for both employers and job candidates If you select an environment that contains customer engagement, you can create the following portals:

Customer self-service portal: A customer self-service portal enables customers to access self-service knowledge, support resources, view the progress of their cases, and provide feedback.

Partner portal: A partner portal allows every organization with resellers, distributors, suppliers, or partners to have real-time access to every stage of shared activities.

Employee self-service portal: An employee self-service portal creates an efficient and well-informed workforce by streamlining common tasks and empowering every employee with a definitive source of knowledge.

Box 2: Model-driven app with push notifications

Compared to canvas apps, model-driven apps in PowerApps are based on underlying data - specifically, the data stored in Common Data Service (CDS).

Box 3: Webform with target set to the job custom entity

Box 4: Configure a value for the Execute Workflow on Redeeming Contact option only.

Execute Workflow on Redeeming Contact: A workflow process to be executed when the invite is redeemed.

The workflow will be passed the redeeming contact as the primary entity.

Box 5: Configure the value for the Assigned to Account option only.

Assign to Account: An account record to be associated as the redeeming contact's parent customer when the invite is redeemed.

NEW QUESTION # 371

A company has a model-driven app.

A custom button on a form calls a JavaScript function that validates form data fields and creates a web basket. The JavaScript function then displays a message to the user. Users are located in the United States, which uses ISO Code 1033, and France, which uses ISO Code 1036. Users in France report that the message displays in English. You need to modify the RibbonDiffXnl file to ensure that messages appear in the user's language. How should you complete the CommandDefinition node? To answer, select the appropriate options in the answer area. NOTE: Each correct selection is worth one point.

The screenshot shows an XML code editor with the following content:

```

<CommandDefinitions>
  <CommandDefinition Id= "GenerateBasket.Command">
    <Actions>
      <JavaScriptFunction FunctionName=" generatebasket"
Library="$webresource:mb_/scripts/basket.js">
        <
          Value="
        >
      </JavaScriptFunction>
    </Actions>
  </CommandDefinition>
</CommandDefinitions>

```

Two dropdown menus are open. The left dropdown menu has the following options: CrmParameter, IntParameter, and StringParameter. The right dropdown menu has the following options: 1033, 1036, OrgLcid, and UserLcid.

Answer:

Explanation:

This screenshot is identical to the one above, but the dropdown menus are highlighted with a green border to indicate the selected options. In the left dropdown menu, 'CrmParameter' is selected. In the right dropdown menu, '1033' is selected.

Explanation:

```

<CommandDefinitions>
  <CommandDefinition Id= "GenerateBasket.Command">
    <Actions>
      <JavaScriptFunction FunctionName=" generatebasket"
Library="$webresource:mb_/scripts/basket.js">
        <
          <CrmParameter
          IntParameter
          StringParameter
          Value="
          1033
          1036
          OrgLcid
          UserLcid
          "/>
        </JavaScriptFunction>
      </Actions>
    </CommandDefinition>
  </CommandDefinitions>

```

Box 1: CrmParameter

In addition to data values, you can retrieve client context information by using <CrmParameter>. You can use the following options as the value for the CrmParameter element: OrgName, OrgLcid, and UserLcid.

Box 2: UserLcid

userLCID is the language code of the current user.

Note: A locale is a set of user preference information related to the user's language. The locale determines how dates, times, currencies, and numbers are formatted, how items are alphabetically sorted, and how strings are compared. The locale identifier (LCID) is a 32-bit value that uniquely defines a locale.

NEW QUESTION # 372

A company manages a Microsoft Power Platform solution that includes an account table. You enable an Auditing flag in the table and import a managed version of the solution to the production environment. After the import you observe that the Auditing flag is disabled in the production environment. You check solution layering of the Account table. You observe that the Fust Party solution customization lays on top of the solution. You need to enable the Auditing setting. In which order should you perform the actions? To answer, move all actions from the list of actions to the answer area and arrange them in the correct order

Actions	Steps to enable the Auditing setting
<ul style="list-style-type: none"> Create a blank solution and move Account table customizations from the original solution to the blank solution. Export the new solution as managed from the development environment and import it to the production environment. 	
<ul style="list-style-type: none"> Remove the Account table from the original solution. Export the solution as managed from the development environment and import it to the production environment by using the Upgrade setting. 	
<ul style="list-style-type: none"> Delete the new solution from the development and production environments. 	
<ul style="list-style-type: none"> Add the Account table and all customizations of this table to the original solution. 	
<ul style="list-style-type: none"> With the Account table, export the original solution as managed from the development environment and import it to the production environment by using the Upgrade setting. 	

Answer:

Explanation:

Actions

- 1 Create a blank solution and move Account table customizations from the original solution to the blank solution. Export the new solution as managed from the development environment and import it to the production environment.
- 2 Remove the Account table from the original solution. Export the solution as managed from the development environment and import it to the production environment by using the Upgrade setting.
- 3 Delete the new solution from the development and production environments.
- 4 Add the Account table and all customizations of this table to the original solution.
- 5 With the Account table, export the original solution as managed from the development environment and import it to the production environment by using the Upgrade setting.

Steps to enable the Auditing setting

- 1 Create a blank solution and move Account table customizations from the original solution to the blank solution. Export the new solution as managed from the development environment and import it to the production environment.
- 2 Remove the Account table from the original solution. Export the solution as managed from the development environment and import it to the production environment by using the Upgrade setting.
- 3 Delete the new solution from the development and production environments.
- 4 Add the Account table and all customizations of this table to the original solution.
- 5 With the Account table, export the original solution as managed from the development environment and import it to the production environment by using the Upgrade setting.

Explanation:

NEW QUESTION # 373

You need to identify why employees are not receiving notification that nine customers are checked in and waiting in the repair area. Which components should you test for each step? To answer, drag the appropriate components to the correct steps. Each component may be used once, more than once, or not at all.

You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Components	Step	Component
action	outbound text	<input type="text"/>
condition	nine customers in the store	<input type="text"/>
expression	number of customers in the store	<input type="text"/>
data operation		

Answer:

Explanation:

Components

- action
- condition
- expression
- data operation

Step

- outbound text
- nine customers in the store
- number of customers in the store

Component

- action
- condition
- data operation

NEW QUESTION # 374

You need to configure a Power Automate flow to update account records by using the response from the Web API. Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

ACTIONS

- Add a condition step to check if the variable value equals 404.
- Add a terminate step and set the status to failed.
- Add a Dataverse update record step to update the Dataverse account record.
- Add an initialize variable step and set the value to the DataId from the Dataverse account record.
- Add an initialize variable step and set the value to the response code from the custom connector.
- Add a condition step to check if the variable value equals 200.

Answer Area

Answer:

Explanation:

- 1 - Add an initialize variable step and set the value to the DataId.
- 2 - Add an initialize variable step and set the value to the response.
- 3 - Add a condition step to check if the variable value equals 200.

NEW QUESTION # 375

.....

By updating the study system of the PL-400 study materials, we can guarantee that our company can provide the newest information about the exam for all people. We believe that getting the newest information about the exam will help all customers pass the PL-400 Exam easily. If you purchase our study materials, you will have the opportunity to get the newest information about the PL-400 exam. More importantly, the updating system of our company is free for all customers.
