#### NEW QUESTION # 34

How does HyperSync work in a Dual Site environment?

- A. Each active connection has two local backups (on the local site) and a third backup connection on the second site (remote site.)
- B. Each active connection has a backup connection on the second site (remote site.)
- **C. Each active connection has a local backup (on the local site) and a second backup connection on the second site (remote site.)**
- D. Each active connection has a local backup (on the local site) and a second backup connection on each of the MHOs.

**Answer: C**

Explanation:

HyperSync is a feature of Maestro that enables stateful synchronization of connections and resources across different sites in a Dual Site environment. HyperSync works by creating two backup connections for each active connection: one on the same site as the active connection, and another on the remote site. This ensures that the connection can be seamlessly resumed in case of a failover event, either within the same site or across the sites. HyperSync uses the Site-Sync port and VLANs to transmit the synchronization packets between the Security Group Members and the Maestro Orchestrators.

#### NEW QUESTION # 35

Maestro allows running commands globally in Expert mode by using global prefixes, such as:

- A. asg all
- **B. g\_all**
- C. all
- D. global

**Answer: B**

Explanation:

The g\_all prefix is used to run commands globally in Expert mode on all Security Group Members of the current Security Group. For example, g\_all cpstop will stop the Check Point services on all SGMs. The other prefixes are not valid for global commands in Expert mode.

### NEW QUESTION # 36

While looking at your system's correction statistics, you notice you have a correction rate approaching 100 percent. Is this a problem?

- **A. A correction rate approaching 100 percent of all connections is unusual. This is a cause for concern because the SGMs may fail to process traffic.**
- B. If correction rates are higher than 80 percent, latency is expected.
- C. In some scenarios, a correction rate approaching 100 percent of all connections is not unusual. This is not usually a cause for concern as the correction mechanism is fast and efficient.
- D. A correction rate above 90 percent indicates a need to disable Layer 4 Distribution.
