

Valid JN0-105 Exam Cram & JN0-105 New Learning Materials

What's more, part of that Free4Torrent JN0-105 dumps now are free: https://drive.google.com/open?id=1VAzcbqwpEGqQTKWl9XLvd0jU88Xove_8

Studying from an updated practice material is necessary to get success in the Juniper JN0-105 certification test on the first try. If you don't adopt this strategy, you will not be able to clear the Junos, Associate (JNCIA-Junos) (JN0-105) examination. Failure in the Junos, Associate (JNCIA-Junos) (JN0-105) test will lead to loss of confidence, time, and money.

Juniper JN0-105 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Routing Policy and Firewall Filters: The topic of Routing Policy and Firewall Filters covers routing policy and firewall filters on Junos devices. Furthermore, the topic also deals with routing policies and firewall filters on a Junos device.
Topic 2	<ul style="list-style-type: none">• Operational Monitoring and Maintenance: Different methods of monitoring or maintaining Junos devices are identified in this topic. Lastly, it discusses monitoring or maintenance procedures for a Junos device.
Topic 3	<ul style="list-style-type: none">• Networking Fundamentals: The topic networking fundamentals covers identifying the concepts and functionality of different fundamental elements of networking.
Topic 4	<ul style="list-style-type: none">• Junos OS Fundamentals: It covers concepts, benefits, and functionality of the core elements of the Junos OS.

JN0-105 New Learning Materials | Valid JN0-105 Exam Sims

With the help of JN0-105 study materials, you can conduct targeted review on the topics which to be tested before the exam, and then you no longer have to worry about the problems that you may encounter a question that you are not familiar with during the exam. With JN0-105 study materials, you will not need to purchase any other review materials. We have hired professional IT staff to maintain JN0-105 Study Materials and our team of experts also constantly updates and renew the question bank according to changes in the syllabus. With JN0-105 study materials, you can study at ease, and we will help you solve all the problems that you may encounter in the learning process.

Juniper Junos, Associate (JNCIA-Junos) Sample Questions (Q64-Q69):

NEW QUESTION # 64

Exhibit

```
user@router> show route 192.168.100.2
```

```
inet.O: 15 destinations, 17 routes (15 active, 0 holddown, 0 hidden) Limit/Threshold: 1048576/1048576 destinations
```

```
+ = Active Route, - = Last Active, * = Both 192.168.100.2/32 *[OSPF/IO] 00:14:29, metric 1
```

```
> to 172.16.1.6 via ge-0/0/1.0 [BGP/170] 00:06:49, localpref 100
```

```
AS path: 65102 I, validation-state: unverified > to 172.16.1.6 via ge-0/0/1.0 Referring to the exhibit, which statement is correct?
```

- A. / Traffic is load-balanced across two routes.
- B. The BGP path is the only active route.
- C. The BGP route is preferred over the OSPF route.
- **D. The OSPF path is the only active route.**

Answer: D

Explanation:

Referring to the exhibit, the presence of the "+" symbol next to the OSPF route for 192.168.100.2/32 indicates that this is the active route being used to forward traffic. The BGP route, although present, does not have the "+" symbol, indicating it is not the active route. In Junos OS, the routing table displays the active route with a "+" symbol, and the fact that the OSPF route has this symbol means it is the preferred path based on the routing protocol's decision process, which takes into account factors such as route preference (administrative distance) and metrics.

NEW QUESTION # 65

You are trying to diagnose packet loss at interface ge-0/0/3.

In this scenario, which command would help you view error statistics in real time?

- A. show interface terse
- B. show interface ge-0/0/3
- **C. monitor interface ge-0/0/3**
- D. monitor interface traffic

Answer: C

Explanation:

The `monitor interface ge-0/0/3` command is used in Junos OS to view real-time statistics for a specific interface. This command helps in diagnosing issues like packet loss by displaying real-time updates of traffic and error statistics for the specified interface.

NEW QUESTION # 66

Click the Exhibit button.

Referring to the exhibit, what is the source IP address of the ping that was executed?

- **A. 10.23.0.2**
- B. 10.23.0.3
- C. 10.24.0.4
- D. 10.12.0.2

Answer: A

Explanation:

The exhibit shows a ping test being executed from router R2 to the IP address 10.23.0.3. Since the ping command is issued on R2 and we see successful replies from 10.23.0.3, it means the source of the ping must be an interface on R2. Given the network diagram and the IP address scheme, the source IP address of the ping is on the interface ge-0/0/2 of R2, which is in the subnet 10.23.0.0/24. The only logical IP address for R2's interface in this subnet, based on standard networking practices and the given options, would be 10.23.0.2. The other addresses provided in the options belong to different subnets or are the destination of the ping itself.

NEW QUESTION # 67

What are two functions of the routing protocol daemon (rpd)? (Choose two.)

- A. It creates forwarding tables.
- B. It maintains routing tables.
- C. It provides access to the CLI.
- D. It generates chassis alarms.

Answer: A,B

Explanation:

The Routing Protocol Daemon (rpd) is a critical component in Juniper Networks devices, responsible for all routing operations. It maintains routing tables, which hold information about network paths and destinations derived from various routing protocols. These tables are used to make decisions about where to send packets. Additionally, rpd generates forwarding tables based on the information in the routing tables. The forwarding tables are then used by the Packet Forwarding Engine (PFE) to actually forward packets to their next hop or final destination.

NEW QUESTION # 68

You are asked to configure your device running Junos OS to automatically archive your configuration upon commit. In this scenario, which two methods are supported by the Junos OS? (Choose two)

- A. RCP
- B. SCP
- C. HTTP
- D. FTP

Answer: A,B

Explanation:

Junos OS supports multiple methods for automatically archiving configurations upon commit. Two of the supported methods are SCP (Secure Copy Protocol) and RCP (Remote Copy Protocol). These methods can be configured to save the configuration files to a remote server automatically whenever a commit is made.

Reference: Juniper Networks Documentation on Configuration Archival

"You can configure Junos OS to automatically archive the configuration using protocols such as SCP and RCP upon commit."

NEW QUESTION # 69

.....

We are confident about our Juniper JN0-105 braindumps tested by our certified experts who have great reputation in IT certification. These JN0-105 exam pdf offers you a chance to get high passing score in formal test and help you closer to your success. Valid JN0-105 Test Questions can be access and instantly downloaded after purchased and there are free JN0-105 pdf demo for you to check.
