SAP Certified Associate - Validating Business Transformation Sample Questions (Q31-Q36):

NEW QUESTION # 31

What are the benefits offered by SAP Cloud ALM for businesses?

(3 correct answers)

- A. It supports only cloud implementation scenarios
- B. It is instantly available for use as a subscription service
- C. It reduces TCO of the solution landscape
- D. It supports process mining with plug & gain
- E. It is available to all customers with Enterprise Support Agreement or cloud contract

Answer: B,C,E

Explanation:

SAP Cloud ALM provides multiple operational and implementation benefits to businesses undergoing transformation. First, it is available to all customers who hold an SAP Enterprise Support Agreement or cloud subscription. This means there are no additional licensing fees, making Cloud ALM a highly accessible lifecycle management platform. Its broad availability encourages consistent adoption across organizations of all sizes.

Second, SAP Cloud ALM is instantly available as a cloud-native subscription service. There is no installation or infrastructure setup required. Customers can begin using Cloud ALM almost immediately after provisioning, accelerating project kickoff and reducing administrative overhead.

Third, one of its major benefits is that it reduces total cost of ownership (TCO) by minimizing on-premise infrastructure requirements and providing standardized, automated tools for monitoring, implementation, testing, and operations. This reduces the need for multiple separate ALM systems and allows customers to centralize lifecycle activities.

Option A is incorrect because process mining with Plug & Gain is a Signavio capability. Option D is incorrect because Cloud ALM supports both cloud and hybrid/on-premise scenarios through integration monitoring and operational support. Therefore, the correct benefits are B, C, and E.

NEW QUESTION # 32

What tool is used for test automation within SAP Cloud ALM projects?

- A. Tricentis
- B. SAP Business Data Cloud
- C. SAP Walk Me
- D. SAP Enable Now

Answer: A

NEW QUESTION # 33

What is the significance of data privacy compliance in a clean core strategy?

- A. It focuses on data duplication
- B. It ensures data is stored and processed only for justifiable purposes
- C. It allows unrestricted access to all data
- D. It eliminates the need for data archiving

Answer: B

Explanation:

Data privacy compliance is an essential element of SAP's clean core strategy because it ensures that an organization manages data responsibly and in accordance with legal and regulatory requirements. In a clean core environment, systems must support standardized handling of personal, sensitive, and business-critical data. This includes ensuring that data is collected, stored, accessed, and processed only for valid business purposes that comply with regulations such as GDPR or local data protection laws.

Maintaining proper data privacy also reduces risk during upgrades and transformations. Clean core principles emphasize minimizing custom data handling logic, which reduces the chances of unauthorized access or non-compliant processing. By adhering to standardized data frameworks and extension patterns, organizations limit the potential for data misuse and maintain clear control over data lineage and retention policies.

Options A and D contradict privacy best practices-unrestricted access and eliminating archiving would create major compliance issues. Option C addresses operational concerns but is unrelated to privacy.

Therefore, the correct significance is that data privacy compliance ensures data is processed lawfully, purposefully, and responsibly within a clean core ecosystem.

NEW QUESTION # 34

What is the significance of data privacy compliance in a clean core strategy?

- A. It focuses on data duplication.
- B. It allows unrestricted access to all data.
- C. It eliminates the need for data archiving
- **D. It ensures data is stored and processed only for justifiable purposes.**

Answer: D

NEW QUESTION # 35

What does SAP LeanIX use to represent applications and capabilities?

- **A. Fact Sheets**
- B. Survey Database
- C. Linked Lists
- D. Forms

Answer: A

Explanation:

Fact Sheets are the core building blocks in SAP LeanIX. Each Fact Sheet holds information about a specific entity, such as an application, business capability, interface, or technology component. These structured profiles include lifecycle data, ownership, dependencies, and relationships. Using Fact Sheets ensures a standardized representation of architectural components, enabling transparency and accurate transformation planning.
