Updated The Open Group OGEA-102 CBT, Valid OGEA-102 Exam Sample

The Open Group New 2025 OGEA-102 Test Tutorial (Updated 20 Questions) [Q10-Q25]

You should also keep in mind that to get success in the The Open Group OGEA-102 exam is not an easy task. The The Open Group OGEA-102 certification exam always gives a tough time to their candidates. So you have to plan well and prepare yourself as per the recommended OGEA-102 Exam study material.

Citing an old saying as "Opportunity always favors the ready minds". In the current era of rocketing development of the whole society, it's easy to be eliminated if people have just a single skill. Our OGEA-102 learning materials will aim at helping every people fight for the OGEA-102 certificate and help develop new skills. Our professsionals have devoted themselves to compiling the OGEA-102 exam questions for over ten years and you can trust us for sure.

>> Updated The Open Group OGEA-102 CBT <<

Updated OGEA-102 CBT - Unparalleled Valid TOGAF Enterprise Architecture Part 2 Exam Exam Sample

If moving up in the fast-paced technological world is your objective, BraindumpsPrep is here to help. The excellent The Open Group OGEA-102 practice exam from BraindumpsPrep can help you realize your goal of passing the The Open Group OGEA-102 Certification Exam on your very first attempt. Most people find it difficult to find excellent The Open Group OGEA-102 exam dumps that can help them prepare for the actual The Open Group OGEA-102 exam.

The Open Group TOGAF Enterprise Architecture Part 2 Exam Sample Questions (Q28-Q33):

NEW QUESTION # 28
You are working as an Enterprise Architect within an Enterprise Architecture (EA) team at a large government agency with multiple divisions. The agency has a well-established EA practice and follows the TOGAF standard as its method for architecture development. The government has mandated that the agency prepare for an "AI-first" world.
The agency wants to determine the impact and role of AI in its future services. The CIO has approved a Request for Architecture Work to explore the use of AI in services. Some leaders are concerned about reliance on AI, security, and employees' need to acquire new skills.
The EA team leader seeks suggestions on managing the risks associated with a new architecture for the AI-first project. Based on the TOGAF standard, which of the following is the best answer?

- A. Create an organization map to show the links between different agency parts. Hold a meeting to teach stakeholders to interpret the models. Manage risks as part of Security Architecture development.
- B. Separate stakeholders into groups and categorize them. Develop models for each group and verify that their concerns are

addressed in Phase G, Implementation Governance.

- C. Conduct an analysis of stakeholders, documenting their concerns and recording them in the Architecture Vision document. Risks should be recorded in the Architecture Requirements Specification and reviewed regularly.
- D. Identify key stakeholders and develop a Communication Plan that addresses their needs. Ensure the architecture addresses risk management and summarizes features of the architecture.

Answer: C

Explanation:
In the context of the TOGAF standard, stakeholder management and addressing stakeholder concerns are critical components, especially for high-impact initiatives like adopting an AI-first approach. Here's why the selected answer aligns best with TOGAF principles and the scenario:
Stakeholder Analysis and Engagement:
Conducting a stakeholder analysis is essential as it helps identify and document the concerns, issues, and cultural factors influencing each stakeholder group. This aligns with TOGAF's emphasis on understanding and managing stakeholder concerns, particularly in the Preliminary and Architecture Vision phases of the ADM (Architecture Development Method). Since the scenario highlights diverse concerns about AI, understanding each group's unique perspective will help the EA team tailor the architecture to address these effectively.
Architecture Vision Document:
By documenting these concerns in the Architecture Vision document, the EA team can provide a clear, high-level representation of how AI will be adopted, its benefits, and how it addresses specific stakeholder concerns. This is critical for communicating the intent and value of the AI-first approach in a way that aligns with the agency's strategic goals, including addressing apprehensions about job security, skill development, and cyber resilience.
Risk Management and Architecture Requirements Specification:
TOGAF highlights the importance of identifying and managing risks early in the process. By documenting the requirements related to risk in the Architecture Requirements Specification, the EA team ensures that these concerns are formally integrated into the architecture and addressed throughout the ADM phases. Regular assessments and feedback loops will provide a mechanism for continual risk monitoring and adjustment as the AI-first initiative progresses.
Alignment with TOGAF's ADM Phases:
The approach specified aligns with TOGAF's guidance on managing risk and stakeholder concerns during the early ADM phases, specifically Architecture Vision and Requirements Management. In these phases, the framework emphasizes identifying and addressing risks associated with stakeholders' concerns to build a resilient and widely accepted architecture.
Reference to TOGAF Stakeholder Management Techniques:
TOGAF's stakeholder management techniques underscore the importance of understanding and addressing stakeholder needs as a foundational step. This involves assessing the influence and interest of various stakeholders and integrating their views into architectural development, ensuring that the architecture aligns with both business goals and operational realities.
In conclusion, by conducting a thorough stakeholder analysis and documenting concerns in both the Architecture Vision and Architecture Requirements Specification, the EA team can ensure that stakeholder concerns are addressed, that the architecture supports AI adoption effectively, and that potential risks are managed proactively. This approach will foster acceptance among stakeholders and ensure that the architecture aligns with the agency's strategic goals and risk management requirements as recommended by TOGAF.

NEW QUESTION # 29
Please read this scenario prior to answering the question
You are working as an Enterprise Architect at a large supermarket. The company runs many retail stores, as well as an online grocery shop. Many of the stores used to remain open 24/7, but the number has decreased in recent years. Instead, they now focus on fulfilling online orders during the night.
The company has a mature Enterprise Architecture (EA) practice and uses the TOGAF standard for its architecture development method. The EA practice is involved in all aspects of the business, with oversight provided by an Architecture Board with representatives from different parts of the business. The EA program is sponsored by the Chief Information Officer (CIO).
Each store uses a standard method to track sales and inventory. This involves sending accurate timely sales data to a central AI-based inventory management system that can predict demand, adjust stock levels and automate reordering. The central inventory management system is housed at the company's central data center.
The company has bought a major rival. The Chief Executive Officer believes that a merger will enable growth through combined offerings and cost savings. The decision has been taken to fully integrate the two organizations, including merging retail operations and systems. This means that duplicated systems will be replaced with one standard retail management system. Also, the company will reduce the number of applications that are used. The CIO expects significant savings will be achieved by implementing these changes across the newly merged company.
One improvement that the rival has successfully implemented is the use of hand-held devices within stores, for both customers and staff. This has increased both customer and staff employee satisfaction due to the time savings this has brought. The CIO has given

the go-ahead to roll out the devices in all stores but has stated that training on how to use the hand-held devices should be brief because there are a lot of employees, many of whom are part-time.

The Request for Architecture Work to oversee the merger has been approved. The project has been scoped and you have been assigned to work on it. Your role includes managing the architecture for the retail stores.

Refer to the scenario

You have been asked to confirm the most relevant architecture principles for the transformation.

Based on the TOGAF Standard, which of the following is the best answer?

[Note: The sequence of the principles listed in each answer does not matter. You should assume the company follows the set of principles that are provided in the TOGAF Standard, ADM Techniques, Architecture Principles chapter. You may need to refer to section 2.6 located in ADM Techniques within the reference text to answer this question.]

- A. Maximize Benefit to the Enterprise, Common Use Applications, Data is an Asset, Responsive Change Management, Technology Independence
- B. Control Technical Diversity, Interoperability, Data is an Asset, Data is Shared, Business Continuity
- C. Common Vocabulary and Data Definitions, Compliance with the Law, Requirements Based Change, Responsive Change Management, Data Security
- D. Common Use Applications, Data is an Asset, Data is Accessible, Ease of Use, Business Continuity

Answer: A

Explanation:
Key aspects of the scenario:
Business Objective:
A merger is happening to combine offerings, reduce costs, and achieve operational efficiency.
The goal includes fully integrating retail operations and systems, replacing duplicated systems, and reducing the number of applications used.
Technological Improvements:
A central AI-based inventory system is in place.
Hand-held devices for stores have improved customer and staff satisfaction and increased efficiency.
Scope of Architecture Work:
Integrating the merged systems.
Managing retail architecture to optimize operations.
TOGAF Alignment:
TOGAF principles aim to ensure the architecture supports business transformation effectively while aligning with governance and best practices.
Best answer analysis:
Option 1:
Maximize Benefit to the Enterprise: Aligns with the merger goals of cost reduction and efficiency.
Common Use Applications: Matches the goal to reduce duplicated systems.
Data is an Asset: Central AI system depends on accurate and reliable data.
Responsive Change Management: Necessary to support the transition and manage organizational impacts.
Technology Independence: Encourages selecting flexible, scalable solutions post-merger.
This option comprehensively aligns with the scenario.
Option 2:
Control Technical Diversity: Important but less emphasized than cost reduction and application unification.
Interoperability: Relevant, but less critical compared to principles addressing business value.
Data is an Asset: Relevant.
Data is Shared: Implied in centralized inventory but not directly stated.
Business Continuity: Important but not the main focus here.
This option partially fits but lacks emphasis on business outcomes.
Option 3:
Common Vocabulary and Data Definitions: Indirectly helpful but not central to the transformation.
Compliance with the Law: Always critical, but no explicit legal issues are mentioned.
Requirements-Based Change: General principle but not transformation-specific.
Responsive Change Management: Relevant.
Data Security: Important but not a central concern in the scenario.
This option focuses more on governance and less on merger goals.
Option 4:
Common Use Applications: Relevant to reducing duplicate systems.
Data is an Asset: Relevant.
Data is Accessible: Fits with AI system and handheld devices but is a subset of "Data is an Asset." Ease of Use: Relevant to

handheld devices but not a core transformation principle.
Business Continuity: Important but secondary to cost and efficiency.
This option focuses more on usability and accessibility rather than transformation objectives.

NEW QUESTION # 30
Please read this scenario prior to answering the question
You have been appointed as senior architect working for an autonomous driving technology development company. The mission of the company is to build an industry leading unified technology and software platform to support connected cars and autonomous driving.
The company uses the TOGAF Standard as the basis for its Enterprise Architecture (EA) framework. Architecture development within the company follows the purpose-based EA Capability model as described in the TOGAF Series Guide: A Practitioners' Approach to Developing Enterprise Architecture Following the TOGAF ADM.
An architecture to support strategy has been completed defining a long-range Target Architecture with a roadmap spanning five years. This has identified the need for a portfolio of projects over the next two years. The portfolio includes development of travel assistance systems using swarm data from vehicles on the road.
The current phase of architecture development is focused on the Business Architecture which needs to support the core travel assistance services that the company plans to provide. The core services will manage and process the swarm data generated by vehicles, paving the way for autonomous driving in the future.
The presentation and access to different variations of data that the company plans to offer through its platform poses an architecture challenge. The application portfolio needs to interact securely with various third-party cloud services, and V2X (Vehicle-to-Everything) service providers in many countries to be able to manage the data at scale. The security of V2X is a key concern for the stakeholders. Regulators have stated that the user's privacy be always protected, for example, so that the drivers' journey cannot be tracked or reconstructed by compiling data sent or received by the car.
Refer to the scenario
You have been asked to describe the risk and security considerations you would include in the current phase of the architecture development?
Based on the TOGAF standard which of the following is the best answer?

- A. You will perform a qualitative risk assessment for the data assets exchanged with partners. This will deliver a set of priorities, high to medium to low, based on identified threats, the likelihood of occurrence, and the impact if it did occur. Using the priorities, you would then develop a Business Risk Model which will detail the risk strategy including classifications to determine what mitigation is enough.
- B. You will focus on the relationship with the third parties required for the travel assistance systems and define a trust framework. This will describe the relationship with each party. Digital certificates are a key part of the framework and will be used to create trust between parties. You will monitor legal and regulatory changes across all the countries to keep the trust framework in compliance.
- C. You will create a security domain model so that assets with the same level can be managed under one security policy. Since data is being shared across partners, you will establish a security federation to include them. This would include contractual arrangements, and a definition of the responsibility areas for the data exchanged, as well as security implications. You would undertake a risk assessment determining risks relevant to specific data assets.
- D. You will focus on data quality as it is a key factor in risk management. You will identify the datasets that need to be safeguarded. For each dataset, you will assign ownership and responsibility for the quality of data needs. A security classification will be defined and applied to each dataset. The dataset owner will then be able to authorize processes that are trusted for a certain activity on the dataset under certain circumstances.

Answer: C

Explanation:
A security domain model is a technique that can be used to define the security requirements and policies for the architecture. A security domain is a grouping of assets that share a common level of security and trust. A security policy is a set of rules and procedures that govern the access and protection of the assets within a security domain. A security domain model can help to identify the security domains, the assets within each domain, the security policies for each domain, and the relationships and dependencies between the domains1 Since the data is being shared across partners, a security federation is needed to establish a trust relationship and a common security framework among the different parties. A security federation is a collection of security domains that have agreed to interoperate under a set of shared security policies and standards. A security federation can enable secure data exchange and collaboration across organizational boundaries, while preserving the autonomy and privacy of each party. A security federation requires contractual arrangements, and a definition of the responsibility areas for the data exchanged, as well as security implications2 A risk assessment is a process that identifies, analyzes, and evaluates the risks that may affect the architecture. A risk assessment can help to determine the likelihood and impact of the threats and vulnerabilities that may compromise the security and privacy of the data assets. A risk assessment can also help to prioritize and mitigate the risks, and to monitor and review the risk

situation3 Therefore, the best answer is D, because it describes the risk and security considerations that would be included in the current phase of the architecture development, which is focused on the Business Architecture. The answer covers the security domain model, the security federation, and the risk assessment techniques that are relevant to the scenario.

NEW QUESTION # 31

You are working as an Enterprise Architect within an Enterprise Architecture (EA) team at a multinational energy company. The company is committed to becoming a net-zero emissions energy business by 2050. To achieve this, the company is focusing on shifting to renewable energy production and adopting eco-friendly practices.

The EA team, which reports to the Chief Technical Officer (CTO), has been tasked with overseeing the transformation to make the company more effective through acquisitions. The company plans to fully integrate these acquisitions, including merging operations and systems.

To address the integration challenges, the EA team leader wants to know how to manage risks and ensure that the company succeeds with the proposed changes. Based on the TOGAF Standard, which of the following is the best answer?

- A. The EA team should develop Business Architecture views that demonstrate how stakeholder concerns are addressed and assess each factor for readiness, urgency, and degree of difficulty.
- B. The EA team should evaluate the company's readiness for change by identifying factors that will impact the transformation. These factors will be used to determine initial risks associated with the initiative.
- C. The EA team should document the risks associated with the transformation in an Implementation Factor Catalog to inform decisions during implementation and deployment.
- D. The EA team should create a Business Scenario to fully describe the business problem that is being addressed by the transformation. Once requirements are identified, they should be evaluated in terms of risks. Any residual risks should be escalated to the Architecture Board.

Answer: D

Explanation:
In TOGAF, creating a Business Scenario is a foundational step in defining and understanding the business problem, especially for complex transformations involving multiple stakeholders and systems, such as in this scenario. This method aligns with Phase A (Architecture Vision) of the TOGAF Architecture Development Method (ADM). Here's why this approach is the most effective:
Understanding Business Requirements:
A Business Scenario provides a structured way to capture and analyze the business requirements, stakeholder concerns, and the contextual elements related to the problem. In this scenario, the company faces challenges in integrating newly acquired companies with existing operations, which includes complex stakeholder concerns across different functional areas. Developing a Business Scenario allows the EA team to break down these complexities into identifiable and manageable parts.
Risk Evaluation and Management:
By using the Business Scenario approach, the EA team can not only define the requirements but also assess associated risks systematically. TOGAF emphasizes the importance of risk management through identifying potential risks, evaluating their impact, and defining strategies for handling these risks. The process includes assessing how risks can be avoided, transferred, or reduced-a necessary step in large-scale transformations to ensure that risks are proactively managed.
Residual Risks and Governance:
Any risks that cannot be fully resolved should be identified as residual risks and escalated to the Architecture Board, which is aligned with TOGAF's governance approach. The Architecture Board's role in TOGAF is to provide oversight and make critical decisions on risks that exceed the control of the EA team. This ensures that unresolved risks are managed at the appropriate level of the organization.
Alignment with TOGAF ADM Phases:
The Business Scenario approach directly aligns with the Preliminary and Architecture Vision phases of the TOGAF ADM, which focuses on establishing a baseline understanding of the business context and the strategic transformation required. The detailed understanding of requirements, stakeholder concerns, and risks identified here will guide the subsequent phases of the ADM, including Business Architecture and Information Systems Architecture.
TOGAF Reference (Section 2.6, ADM Techniques):
TOGAF provides guidelines on the creation of Business Scenarios as part of ADM Techniques, highlighting the importance of defining a business problem comprehensively to ensure successful transformation. This method includes identification of stakeholders, business requirements, and associated risks, which aligns well with the company's need for strategic and systematic integration of new business units.
By utilizing a Business Scenario, the EA team ensures that all aspects of the transformation are well understood, risks are identified early, and residual risks are managed effectively, aligning with the company's strategic objectives and the TOGAF framework's guidance on risk management and stakeholder alignment.

NEW QUESTION # 32
Please read this scenario prior to answering the question
You are working as the Chief Enterprise Architect within a law firm specializing in personal injury cases. Many of the firm's competitors have improved their litigation strategies, and efficiency by streamlining their processes using Artificial Intelligence {Al). The CIO has approved a Request for Architecture Work to examine the use of Machine Learning in defining a new Al-driven litigation and finance process for the firm. This process would instruct the lawyers and analysts as to what tasks and portfolio they should work on. The key objectives are to increase task profitability, maximize staff utilization, and increase individual profitability. The CIO has emphasized that the architecture should enable the fast implementation of continuous Machine Learning. The solution will need to be constantly measured for delivered value and be quickly iterated to success.
Some of the partners have expressed concerns about letting the Al make the decisions, others about the risks associated with use of it for the type of service they deliver. The CIO wants to know if these concerns can be addressed, and how risks will be covered by a new architecture enabling Al and Machine Learning.
Refer to the scenario
You have been asked to respond to the CIO recommending an approach that would enable the development of an architecture that addresses the concerns of the CIO and the concerns of the partners.
Based on the TOGAF standard which of the following is the best answer?

- A. You recommend creation of a set of business models that can be applied uniformly across all architecture projects. The stakeholders will be trained to understand the business models to ensure they can see that their concerns are being addressed. Risk will be addressed once the Security Architecture is developed, which will happen later to avoid slowing down the agility required by the CIO.
- B. You recommend that an analysis of the stakeholders is undertaken resulting in documenting the stakeholders and their concerns in a Stakeholder Map. The concerns and relevant views should then be defined for each group and recorded in the Architecture Vision document. The requirements will include risk mitigation through regular assessments. This will also allow a supervised agile implementation of the continuous Machine Learning.
- C. You recommend that a Communications Plan be created to address the key stakeholders, the most powerful and influential partners. This plan should include a report that summarizes the key features of the architecture reflecting their requirements. You will check with each key stakeholder that their concerns are being addressed. Risk mitigation and agility will be explicitly addressed as a component of the architecture being developed.
- D. You recommend that all possible models be created for each candidate architecture that will enable the Al and Machine Learning solution. This ensures that all the necessary data and detail is addressed. A formal review should be held with the stakeholders to verify that their concerns have been properly addressed by the models. Agility will be considered during Phase G Implementation Governance.

Answer: B

NEW QUESTION # 33

......

To take a good control of your life, this OGEA-102 exam is valuable with high recognition certificate. Actually getting a meaningful certificate by passing related OGEA-102 exam is also becoming more and more popular. So finding the perfect practice materials is pivotal for it. You may be constrained by a number of factors like lack of processional skills, time or money to deal with the practice exam ahead of you. While our OGEA-102 Study Materials can help you eliminate all those worries one by one.

You will also be able to get discounts for OGEA-102 on complete packages, Come and buy our OGEA-102 exam dump files, So you can master the Valid OGEA-102 Exam Sample - TOGAF Enterprise Architecture Part 2 Exam test guide well and pass the exam successfully, Even to ascertain the 100 percent perfection of our Valid OGEA-102 Exam Sample - TOGAF Enterprise Architecture Part 2 Exam vce practice, First, The Open Group OGEA-102 quiz will provide you an absolutely safe payment environment.

The central issue with IT management is the process of drawing OGEA-102 data from a managed entity, making a decision based on that data, and then taking some appropriate action.

Fundamentally, if you need to understand how the latest software development approaches can help meet business goals, this book is for you, You will also be able to get discounts for OGEA-102 on complete packages.

Efficient The Open Group Updated OGEA-102 CBT - OGEA-102 Free Download

Come and buy our OGEA-102 exam dump files, So you can master the TOGAF Enterprise Architecture Part 2 Exam test guide well and pass the exam successfully, Even to ascertain the 100 percent perfection of our TOGAF Enterprise Architecture Part 2 Exam vce practice.

First, The Open Group OGEA-102 quiz will provide you an absolutely safe payment environment.
