

100% Pass Quiz 2026 High Hit-Rate Versa Networks Valid Test VNX301 Braindumps

100% Pass Quiz PCCSE - Trustable Valid
Braindumps Prisma Certified Cloud Security
Engineer Sheet

Why our PCCSE exam questions are the most popular at this time? On the one hand, according to the statistics from the feedback of all of our distributors, the hit-rate among our distributors who prepared for the PCCSE exam with the help of our PCCSE guide turned out to be as high as 90% to 100%. On the other hand, the simulation test is available in our software version of our PCCSE Exam Questions, which is useful for you to get accustomed to the PCCSE exam atmosphere. Please believe us that our PCCSE sample questions are the best choice for you.

Professional PCCSE exam using ExamKits free exam discussions. PCCSE Prisma Certified Cloud Security Engineer exam discussions provide a supportive environment where you can discuss difficult concepts and ask questions of your peers. In a free exam discussion, you'll have the opportunity to learn from a certified PCCSE instructor who has extensive experience in PCCSE issues. The instructor will also provide you with tips and hints for preparing for taking the exam.

Scrutinize Quality With The Palo Alto Networks PCCSE Exam Questions Demo

When you decide to pass PCCSE exam, you must want to find a good study material to help you prepare for your exam. If you decide to choose our products as your study tool, you will be easier to pass your exam and get the PCCSE certification in the shortest time. To do not hesitate and buy our PCCSE Exam Questions, an unexpected surprise is waiting for you. We believe you will prefer to our PCCSE test questions than other study materials. In order to let you understand our PCCSE exam prep in detail, we are going to introduce our products to you.

We offer you free update for one year after purchasing, that is to say, in the following year, you will get the updated version for VNX301 learning materials for free. And our system will immediately send the latest version to your email address automatically once they update. What's more, the VNX301 Learning Materials are high quality, and it will ensure you to pass the exam successfully. Pass guarantee and money back guarantee if you can't pass the exam.

Versa Networks VNX301 Exam Syllabus Topics:

Topic	Details
Topic 1	SD-WAN Network Topologies and Routing Concepts: Examines the various deployment topologies such as hub-and-spoke or full-mesh, along with routing protocols and path selection mechanisms used across the WAN.
Topic 2	SD-WAN Infrastructure Administration: Focuses on day-to-day operational tasks including monitoring, troubleshooting, software management, and maintaining the health of the SD-WAN environment.
Topic 3	Versa SD-WAN Services: Covers the WAN services delivered through Versa's platform, including application steering, traffic policies, SLA monitoring, and link aggregation.

Topic 4	• Underlay • Overlay Technologies: Covers the foundational transport networks (underlay) and the virtual networks built on top of them (overlay), including tunneling protocols used in SD-WAN deployments.
Topic 5	• Versa Secure SD-WAN Infrastructure: Focuses on the core components and architecture of Versa's SD-WAN platform, including controllers, directors, and secure connectivity between sites.
Topic 6	• Versa Security Services: Addresses the integrated security capabilities within Versa SD-WAN, such as next-generation firewall, IPS • IDS, URL filtering, and segmentation.

Pass Guaranteed Quiz Unparalleled VNX301 - Valid Test Versa Certified SD-WAN Specialist (VNX300) Braindumps

We guarantee to you that the refund process is very simple and only if you provide us the screenshot or the scanning copy of your failure marks we will refund you in full immediately. If you have doubts or problems about our VNX301 exam torrent, please contact our online customer service or contact us by mails and we will reply and solve your problem as quickly as we can. We won't waste your money and your time and if you fail in the exam we will refund you in full immediately at one time. We provide the best VNX301 Questions torrent to you and don't hope to let you feel disappointed.

Versa Networks Versa Certified SD-WAN Specialist (VNX300) Sample Questions (Q61-Q66):

NEW QUESTION # 61

Examine the exhibit below.

According to the CGNAT pool configuration shown in the exhibit, which two statements are true? (Choose two.)

Add CGNAT Pool

General **IP Address** Port

☒ IP Address/Range ☐ Egress Network ☐ Egress Interface

IP Address/Mask List +
 IP Address/Mask List Not Configured

Egress Network +
 Egress Network Not Configured

Egress Interface +
 Egress Interface Not Configured

IP Address Range

Range Name ▲ Low High +

Visitors 192.168.10.100 192.168.10.150

Address Allocation Scheme: Round Robin Routing Instance: INET-Transport-VR Provider Org: --Select--

VERSA NETWORKS

OK Cancel

Add CGNAT Pool

General IP Address **Port**

☐ Destination port

Low Port: 165535 High Port: 165535

☐ Source Port

Allocation Scheme: Allocate IP/port randomly

Low Port: 165535 High Port: 165535

OK Cancel

- A. The source address of matching sessions will be translated to an address in the range of 192.168.10.100 through 192.168.10.150.
- B. Ports will be dynamically translated for each session. group
- C. Port translation will not be applied on sessions.
- D. Only addresses sourced from hosts in the 192.168.10.100 through 192.168.10.150 address range will be translated.

Answer: A,C

Explanation:

The exhibit shows the Add CGNAT Pool configuration with the IP Address/Range option selected. The configured address range is named Visitors , with a low address of 192.168.10.100 and a high address of 192.168.10.150 . In CGNAT, this pool defines the translated source address resource used by matching NAT rules; it does not define the original inside source hosts. Therefore, matching sessions will have their source address translated to an address from this configured pool range, which makes option C correct. Versa's CGNAT configuration examples show that a rule matches original source and destination prefixes, and then attaches a translated source pool to perform NAT.

NEW QUESTION # 62

A branch device has completed Stage 3 onboarding. Which set of tunnels or sessions should exist after the device becomes fully operational in the customer SD-WAN network?

- A. Only an HTTPS session between the branch and Director
- B. GRE-only tunnels between all branches without IPsec
- C. IKE and IPsec sessions between the branch and Controller, and VXLAN and ESP sessions between branches
- D. Only a BGP session between the branch and Analytics

Answer: C

Explanation:

The correct answer is A . In Versa Secure SD-WAN onboarding, the branch moves through three staging phases before becoming fully operational. Versa documentation states that in Stage 3 , Versa Director pushes the stage-three configuration to the branch device over the IKE session and reboots the branch. After this stage, the branch becomes fully operational and is part of the customer SD-WAN network. At this point, IKE and IPsec sessions are created between the branch and Controller , and VXLAN and ESP sessions are created between branch to branch .

This distinction is important because the Controller connection is used for SD-WAN control-plane functions, while branch-to-branch overlay communication uses tunnel encapsulation for data forwarding. The documentation also notes that branch-to-branch

ESP is maintained using a lightweight DH key-pair proprietary protocol.

Options B, C, and D are incorrect. HTTPS to Director alone does not represent the complete SD-WAN operational tunnel state. BGP to Analytics is not the required operational tunnel set. GRE-only tunnels without IPsec do not match the Versa Stage 3 SD-WAN tunnel behavior described in the staging documentation.

NEW QUESTION # 63

During onboarding, Versa Director shows the first branch-connect notification for a new CPE, but no later staged branch-connect notification appears. Which troubleshooting area should be investigated first?

- A. Versa Analytics log collector disk usage
- **B. Data path or IPsec connectivity from the branch to the Controller**
- C. URL filtering database download status
- D. LDAP authentication configuration on the tenant

Answer: B

Explanation:

The correct answer is B. Versa branch lifecycle notifications are generated at different stages of onboarding.

The first notification indicates that the branch connected using factory-default configuration. After that notification, Versa Director pushes the staging configuration to the branch and requests a reboot. After rebooting with staging configuration, the branch should connect again to the Controller, and a later branch-connect notification should appear.

If this later staged connection notification does not appear, Versa's troubleshooting guidance says to debug either the data path or IPsec connectivity from the branch to the Controller. This makes sense because the branch must have working transport reachability and IKE/IPsec establishment toward the Controller before it can continue the SD-WAN lifecycle.

Analytics disk usage, LDAP authentication, and URL filtering are not part of the branch staging control path. They may affect monitoring, user identity, or security inspection after the site is operational, but they do not explain why the branch stops after the initial factory-default onboarding notification.

NEW QUESTION # 64

You are asked to ensure symmetric traffic flows between two SD-WAN branches. Which feature should be enabled to achieve this objective?

- A. Symmetric Routing
- B. Packet Striping
- C. Equal-Cost Multipath
- **D. Symmetric Forwarding**

Answer: D

Explanation:

Symmetric Forwarding is the correct Versa SD-WAN feature for ensuring that return traffic between SD-WAN branches follows the same SD-WAN path on which the forward traffic was received. Versa documentation for SD-WAN traffic steering describes Symmetric forwarding as the option that specifies the path for reverse-direction traffic, meaning whether traffic returning from the destination branch to the originating branch should be sent on the same path on which it arrived. It further states that enabling symmetric traffic forwarding determines the reverse path for traffic returning from the destination branch to the originating branch. This is different from Symmetric Routing, which is a routing design goal or behavior, not the Versa SD-WAN forwarding-profile feature named in the product documentation. Equal-Cost Multipath can distribute flows across equal-cost routes, but it does not specifically guarantee that both directions of the same SD-WAN session use the same path. Packet Striping is used to split or distribute packets across multiple links for performance, not to enforce bidirectional path symmetry. Therefore, the verified Versa feature to enable is Symmetric Forwarding.

NEW QUESTION # 65

A new SD-WAN branch has completed factory-default onboarding and Versa Director has pushed the staging configuration. After reboot, the branch still tries to connect to the staging server instead of the Controller.

Which configuration item is most likely incorrect or missing in the stage-two configuration?

- A. Analytics log collector IP address

- B. URL filtering profile
- **C. Controller IP address in the IPsec profile remote IP field**
- D. Tenant LAN DHCP pool

Answer: C

Explanation:

The correct answer is A . During Versa SD-WAN onboarding, the branch uses the staging server only in the early part of the process. Versa documentation states that in Stage 1 , the branch starts an IKE session with the staging server, receives an IP address, and is informed of the Versa Director IP address. In Stage 2 , Versa Director pushes the stage-two configuration to the branch through the staging server. In this stage-two configuration, the Controller IP address is given as the remote IP address in the IPsec profile , and the branch is rebooted. After reboot, the branch should establish the IKE session with the Controller. If the branch keeps trying to connect to the staging server after the stage-two reboot, the most likely issue is that the stage-two IPsec profile still points to the staging server or does not contain the correct Controller remote IP. Analytics, DHCP, and URL filtering settings do not determine whether the branch moves from staging-server connectivity to Controller IKE connectivity.

NEW QUESTION # 66

.....

It is known to us that our VNX301 study materials have been keeping a high pass rate all the time. There is no doubt that it must be due to the high quality of our study materials. It is a matter of common sense that pass rate is the most important standard to testify the VNX301 study materials. The high pass rate of our study materials means that our products are very effective and useful for all people to pass their exam and get the related certification. So if you buy the VNX301 Study Materials from our company, you will get the certification in a shorter time.
