Enhance Your Preparation with the Netskope NSK300 Online Practice Test Engine

Maybe you are still having trouble with the Netskope NSK300 exam; maybe you still don't know how to choose the NSK300 exam materials; maybe you are still hesitant. But now, your search is ended as you have got to the right place where you can catch the finest NSK300 exam materials. Here you can answer your doubts; you can easily pass the exam on your first attempt. All applicants who are working on the NSK300 exam are expected to achieve their goals, but there are many ways to prepare for exam. Everyone may have their own way to discover. Some candidates may like to accept the help of their friends or mentors, and some candidates may only rely on some NSK300 books. But none of these ways are more effective than our NSK300 exam material. In summary, choose our exam materials will be the best method to defeat the exam.

Netskope Certified Cloud Security Architect Sample Questions (Q60-Q65):

NEW QUESTION # 60
You recently began deploying Netskope at your company. You are steering all traffic, but you discover that the Real-time Protection policies you created to protect Microsoft OneDrive are not being enforced.
Which default setting in the Ul would you change to solve this problem?

- A. Disable the default certificate-pinned application
- B. Disable the default Microsoft appsuite SSL rule.
- C. Remove the default steering exception for domains.
- D. Remove the default steering exception for Cloud Storage.

Answer: C

Explanation:
When deploying Netskope and steering all traffic, if you find that the Real-time Protection policies for Microsoft OneDrive are not being enforced, the likely issue is with the default steering exceptions. To resolve this, you should remove the default steering exception for domains . This is because the default exceptions may include domains related to Microsoft services, which could prevent the Real-time Protection policies from being applied to traffic directed towards OneDrive. By removing these exceptions, you ensure that all traffic, including that to OneDrive, is subject to the policies you have set up.

NEW QUESTION # 61
You are architecting a Netskope steering configuration for devices that are not owned by the organization The users could be either on-premises or off-premises and the architecture requires that traffic destined to the company's instance of Microsoft 365 be steered to Netskope for inspection.
How would you achieve this scenario from a steering perspective?

- A. Use explicit proxy and the Netskope Client
- B. Use reverse proxy.
- C. Use IPsec and GRE tunnels.
- D. Use DPoP and Secure Forwarder

Answer: A

Explanation:
For devices not owned by the organization, using an explicit proxy along with the Netskope Client is the best approach to steer traffic for inspection. This method allows for granular control over the traffic, ensuring that only the traffic destined for the company's instance of Microsoft 365 is inspected by Netskope. The explicit proxy configuration can be applied regardless of whether the users are on-premises or off-premises, providing a consistent steering mechanism for all users.

NEW QUESTION # 62
You are attempting to merge two Advanced Analytics reports with DLP incidents: Report A with 3000 rows and Report B with 6000 rows. Once merged, you notice that the merged report is missing a significant number of rows.
What is causing this behavior?

- A. Filters are applied differently to dimensions and measures
- B. Visualizations have a system limit of 5000 rows.
- C. Netskope automatically deduplicates data in merged reports.
- D. Missing data is due to viewing limits.

Answer: D

Explanation:
When merging two Advanced Analytics reports in Netskope, if the merged report is missing rows, it is likely due to viewing limits within the system. Netskope's Advanced Analytics platform has limitations on the number of rows that can be viewed at once, which can result in missing data when dealing with large reports. This viewing limit ensures performance and manageability of the data within the system.

NEW QUESTION # 63
Your company just had a new Netskope tenant provisioned and you are asked to create a secure tenant configuration. In this scenario, which two default settings should you change? {Choose two.)

- A. Change the No SNI setting to Block.
- B. Change Untrusted Root Certificate to Block.
- C. Change "Disallow concurrent logins by an Admin" to Enabled.

- D. Change Safe Search to Disabled

Answer: B,C

Explanation:

For a new Netskope tenant provisioned, to create a secure tenant configuration, you should consider changing the following default settings:
* B. Change Untrusted Root Certificate to Block: This setting will ensure that any traffic coming from an untrusted root certificate is blocked, which is a critical security measure to prevent man-in-the-middle attacks and other types of cyber threats1.
* D. Change "Disallow concurrent logins by an Admin" to Enabled: This setting will prevent multiple concurrent logins by the same admin account, which is an important security control to mitigate the risk of unauthorized access.If an admin's credentials are compromised, this setting will help limit the potential damage by ensuring that only one session can be active at a time1.
These changes are part of the recommended security hardening guidelines for Netskope tenants to enhance the overall security posture of the tenant environment.
The recommendations for changing default settings for a secure tenant configuration are based on Netskope' s security hardening guidelines, which provide detailed instructions on how to enhance the security of Netskope products and components deployed in customer environments1.

NEW QUESTION # 64
Review the exhibit.

You installed Directory Importer and configured it to import specific groups ot users into your Netskope tenant as shown in the exhibit. One hour after a new user has been added to the domain, the user still has not been provisioned to Netskope.
What are three potential reasons for this failure? (Choose three.)

- A. The server that the Directory Importer is installed on is unable to reach Netskope's add-on endpomt.
- B. Active Directory integration is not enabled on your tenant.
- C. Directory Importer does not support ongoing user syncs; you must manually provision the user.
- D. The default collection interval is 180 minutes, therefore a sync may not have run yet.
- E. The user is not a member of the group specified as a filter

Answer: A,D,E

Explanation:

The three potential reasons for the failure of a new user not being provisioned to Netskope an hour after being added to the domain could be:
B . The server that the Directory Importer is installed on is unable to reach Netskope's add-on endpoint: If the server cannot connect to Netskope's endpoint, it cannot sync the user data. This could be due to network issues, incorrect configuration, or firewall restrictions1.
C . The user is not a member of the group specified as a filter: The Directory Importer may be configured to import users from specific groups only. If the new user is not a member of these groups, they will not be imported into Netskope1.
E . The default collection interval is 180 minutes, therefore a sync may not have run yet: The Directory Importer may be scheduled to sync every 180 minutes. If only an hour has passed, the sync process might not have occurred yet, and the user would not be provisioned until the next sync interval1.

NEW QUESTION # 65
......

In order to make sure your whole experience of buying our NSK300 prep guide more comfortable, our company will provide all people with 24 hours online service. The experts and professors from our company designed the online service system on our NSK300 exam questions for all customers. If you purchasing the NSK300 Test Practice files designed by many experts and professors from our company, we can promise that our online workers are going to serve you day and night during your learning period. And you can enjoy updates of NSK300 learning guide for one year after purchase.

On one hand, our NSK300 study questions can help you increase the efficiency of your work, TroytecDumps Latest NSK300 Test Camp is driven by the ambition of making you succeed, Netskope Reliable NSK300 Braindumps Sheet All your training process will only takes 20-30 hours, Recent years it has seen the increasing popularity on our NSK300 study materials: Netskope Certified Cloud Security Architect, more and more facts have shown that millions of customers prefer to give the choice to our NSK300

certification training questions, and it becomes more and more fashion trend that large number of candidates like to get their Netskope certification by using our NSK300 study guide, Many people want to pass exams and get the NSK300 certification there are three reasons as follows: 1.

It is highly unlikely that you could build technology faster than these NSK300 companies can, In this competitive society, being good at something is able to take up a large advantage, especially in the IT industry.
