Google Certified Professional - Cloud Developer Sample Questions (Q309-Q314):

NEW QUESTION # 309

You are developing a secure document sharing platform. The platform allows users to share documents with other users who may be external to their organization. Access to these documents should be revoked after a configurable time period. The documents are stored in Cloud Storage. How should you configure Cloud Storage to support this functionality?

- A. Generate a signed URL for each document the user wants to share.
- B. Apply access control list (ACL) permissions to the Cloud Storage bucket.
- C. Create signed policy documents on the Cloud Storage bucket.
- D. Grant the Storage Object Viewer IAM role to all authenticated users.

Answer: A

Explanation:

<https://cloud.google.com/storage/docs/access-control/>

NEW QUESTION # 310

You need to migrate an internal file upload API with an enforced 500-MB file size limit to App Engine. What should you do?

- A. Use FTP to upload files.
- B. Change the API to be a multipart file upload API.
- C. Use CPanel to upload files.
- D. Use signed URLs to upload files.

Answer: D

Explanation:

Explanation/Reference: https://wiki.christophchamp.com/index.php?title=Google_Cloud_Platform

NEW QUESTION # 311

You are planning to add unit tests to your application. You need to be able to assert that published Pub/Sub messages are processed by your subscriber in order. You want the unit tests to be cost-effective and reliable. What should you do?

- A. Use the Pub/Sub emulator.
- B. Implement a mocking framework.
- C. Add a filter by tester to the subscription.
- D. Create a topic and subscription for each tester.

Answer: A

Explanation:

<https://cloud.google.com/pubsub/docs/emulator>, "Testing apps locally with the emulator".

NEW QUESTION # 312

You need to deploy a new feature into production on Cloud Run. Your company's SRE team mandates gradual deployments to avoid large downtimes caused by code change errors. You want to configure this deployment with minimal effort. What should you do?

do?

- A. Configure the application's frontend load balancer to toggle between the new and old revisions.
- **B. Deploy the feature with "Serve this revision immediately" unchecked, and configure the new revision to serve a small percentage of traffic. Check for errors, and increase traffic to the revision as appropriate.**
- C. Configure the application code to send a small percentage of users to the newly deployed revision.
- D. Deploy the feature with "Serve this revision immediately" checked. Check for errors, roll back to the previous revision, and repeat the process until you have verified that the deployment is bug-free.

Answer: B

Explanation:

<https://cloud.google.com/run/docs/deploying>

NEW QUESTION # 313

Your application is composed of a set of loosely coupled services orchestrated by code executed on Compute Engine. You want your application to easily bring up new Compute Engine instances that find and use a specific version of a service. How should this be configured?

- **A. Define your service endpoint information as metadata that is retrieved at runtime and used to connect to the desired service.**
- B. Define your service endpoint information to be retrieved from an environment variable at runtime and used to connect to the desired service.
- C. Define your service endpoint information as label data that is retrieved at runtime and used to connect to the desired service.
- D. Define your service to use a fixed hostname and port to connect to the desired service. Replace the service at the endpoint with your new version.

Answer: A

Explanation:

<https://cloud.google.com/service-infrastructure/docs/service-metadata/reference/rest#service-endpoint>
