NetSec-Architect Exam Dumps.zip - VCE NetSec-Architect Exam Simulator

Free update for 365 days is available for NetSec-Architect study guide, so that you can have a better understanding of what you are going to buy. Through free demo, you can also know what the complete version is like. In addition, with experienced experts to compile the NetSec-Architect Exam Dumps, quality can be guaranteed. Therefore, if you choose us, you can use them at ease. We have online and offline chat service stuff, who are quite familiar with NetSec-Architect study guide, if you have any questions, you can consult us.

Certification has become a prerequisite for employment and career growth in the Palo Alto Networks industry for reputable companies. To advance comfortably in your career, passing the NetSec-Architect exam is a valuable validation of your expertise. However, many test takers struggle to find updated Palo Alto Networks Network Security Architect (NetSec-Architect) dumps and fail to prepare effectively in a short period, resulting in a loss of time, money, and motivation.

Actual Exam Questions in Palo Alto Networks NetSec-Architect PDF for Quick Preparation

PDF4Test trained experts have made sure to help the potential applicants of Palo Alto Networks Network Security Architect certification to pass their Palo Alto Networks Network Security Architect exam on the first try. Our PDF format carries real Palo Alto Networks NetSec-Architect Exam Dumps. You can use this format of Palo Alto Networks NetSec-Architect actual questions on your smart devices.

Palo Alto Networks Network Security Architect Sample Questions (Q28-Q33):

NEW QUESTION # 28
A multinational organization has a large worldwide remote user base. This user base consists of several persona types with distinct requirements and concerns regarding the adoption of a Zero Trust Network Access (ZTNA) solution.
- Developers have a requirement to temporarily bypass security controls for business purposes, but the security team sees this as a potential risk. The developers commonly access development servers onsite in private data centers and public cloud. These development applications use web (HTTP/HTTPS), API, RPC, and SMB-based applications.
- Sales staff travel regularly and connect to the network via many different types of connections, but they are generally limited to SaaS-based web applications. They often complain about performance when any agent is installed and want the ability to temporarily disable these agents.
Data exfiltration and insider risk have been identified as the primary threats for this class of user.
- Executives have concerns about being high-value targets. Security must be consistent across the multiple endpoint types, including mobile and desktop devices. The executive team members have indicated that their primary objective is to ensure that the solution is responsive and easy to troubleshoot.
Which statement applies in the context of securing the developers' applications?

- A. Explicit proxy on ramps can only provide security for HTTP, HTTPS, and proxy-aware applications
- B. Mobile users, remote networks, and explicit proxy all provide the same Cloud-Delivered Security Services (CDSS) capabilities.
- C. ZTNA Connector requires DNS for all applications it publishes and does not permit direct IP address-based access
- D. GlobalProtect mobile users and explicit proxy users share the same configuration scope for policy configuration

Answer: A

Explanation:
Explicit proxy architectures are limited to HTTP/HTTPS and proxy-aware traffic, which means they cannot support non-web protocols such as SMB, RPC, or other application types commonly used by developers. Therefore, they are not suitable for securing the full range of developer applications in this scenario.

NEW QUESTION # 29
An organization uses Microsoft Entra ID and wants to strictly enforce a requirement that remote users accessing highly sensitive SaaS applications can only do so when originating from Prisma Browser. Which unique identifier must be configured within the Entra ID Conditional Access policy to effectively confirm and enforce that the access request is specifically originating from Prisma Browser and preventing standard web browsers from circumventing the Zero Trust Network Access (ZTNA) control?

- A. Certificate thumbprint of Prisma Browser's secure workspace key used for session encryption
- B. Unique device token or Device-ID issued by Prisma Browser and validated by Entra ID
- C. GlobalProtect mobile application installed on the user's endpoint
- D. List of known egress IP addresses associated with Prisma Browser's cloud proxy infrastructure

Answer: B

Explanation:
Prisma Browser provides a unique device identity signal that can be integrated with Microsoft Entra ID Conditional Access. This device token (Device-ID) allows Entra ID to verify that the session originates specifically from the Prisma Browser environment, enabling strict enforcement that only sanctioned browser instances can access sensitive SaaS applications.

NEW QUESTION # 30
A global manufacturing organization has a strategic plan for rapid growth through mergers and acquisitions Several components the organization has purchased are deemed large deployments with existing IP address schemas and allocations that conflict with the parent organization. The manufacturing organization needs access to the resources before a re-IP initiative can be completed.
All of the deployments include a variety of IoT devices Leadership requires protection of vulnerable assets and identification of any known CVEs associated with the IoT devices. The governance, risk and compliance (GRC) team requires comprehensive non-repudiable logs to identify all IoT devices reporting "Critical (9 0+) CVE scores" for mandatory remediation.
Throughput needs to exceed the current 1 Gbps trending rate, and with expected growth will soon scale to 5 Gbps.
Segmentation is a mandatory requirement with enclaves based on region, device type, and function.
In which two ways should the organization architect for isolation of IoT with groupings based on the device types? (Choose two.)

- A. Device-ID based policies
- B. Vendor OUI-based policy
- C. CVE risk scoring-based policy
- D. Dynamic address groups

Answer: A,D

Explanation:
Device-ID enables identification and classification of IoT devices based on attributes such as device type, allowing policy enforcement specific to those device categories. Dynamic address groups allow automatic grouping of devices based on tags or attributes, enabling scalable segmentation and isolation aligned with device type and function without manual updates.

NEW QUESTION # 31
A global manufacturing organization has a strategic plan for rapid growth through mergers and acquisitions Several components the organization has purchased are deemed large deployments with existing IP address schemas and allocations that conflict with the parent organization. The manufacturing organization needs access to the resources before a re-IP initiative can be completed.

All of the deployments include a variety of IoT devices Leadership requires protection of vulnerable assets and identification of any known CVEs associated with the IoT devices. The governance, risk and compliance (GRC) team requires comprehensive non-repudiable logs to identify all IoT devices reporting "Critical (9 0+) CVE scores" for mandatory remediation.
Throughput needs to exceed the current 1 Gbps trending rate, and with expected growth will soon scale to 5 Gbps.
Segmentation is a mandatory requirement with enclaves based on region, device type, and function.
In which two ways should the organization architect for isolation of IoT with groupings based on the device types? (Choose two.)

- A. Device-ID based policies
- B. Vendor OUI-based policy
- C. CVE risk scoring-based policy
- D. Dynamic address groups

Answer: A,D

NEW QUESTION # 32
A global organization is in the process of securing critical applications during a cloud-based migration while migrating to a cloud-first design, and it is currently performing a brownfield migration of its most critical applications - such as CRM and product intellectual property / design systems - into Azure Cloud. The organization already has an active/passive high availability (HA) NGFW deployed at its data center with multiple zones and has replicated that design into its existing Azure HA deployment.
The organization recognizes the need to modernize its security posture as critical workloads move out of the data center and users connect from anywhere. Its security model is defined by a traditional "hard shell, soft center" approach:
Zero Trust Gaps
- Current network segmentation is perimeter-based. The organization wants to expand Zero Trust principles across cloud and on-premises environments.
- The network relies heavily on VLANs and IP address-based Access Control Lists (ACLs) segmented primarily by office location and broad departmental groups.
- Once employees are on the corporate network (i.e., inside the "perimeter"), they have relatively wide access.
- If attackers compromise a single endpoint (e.g., via a phishing email), they can easily move laterally and scan for high-value targets.
Cloud Blind Spots
- The organization uses Azure for its production environments and hosts applications that contain sensitive customer data.
- Security controls in the cloud are often managed independently of the on-premises network.
Access is frequently granted with overly permissive identity and access management (IAM) roles and keys based on the resource rather than the user's real-time context or application health.
Remote User Access
- Many remote users are still hairpinning into the corporate data center just to reach internet or SaaS resources, creating latency and inefficiency.
- Traditional VPN is used for remote employees.
- The VPN grants access to the entire internal network segment making the remote endpoint the new, weaker perimeter. There is no continuous check on the user's device health after the initial connection.
Visibility and Logging
- Logs are primarily stored on-premises, then forwarded to a local Security Information and Event Management (SIEM) solution.
As applications move to Azure, visibility into cloud traffic and user behavior becomes fragmented.
Data Security Concern
- Sensitive data, including product design files, will now live in SaaS and cloud environments. The organization needs data security to prevent leakage and enforce compliance.
Ingress Security
- Third-party partners and suppliers require access into the data center and cloud applications, introducing risk at ingress points.
Which solution will improve resilience and reduce operational overhead in this scenario?

- A. Vertically scaling the existing HA solution with enough capacity for the new applications
- B. Centralized VM-Series NGFW deployed in the existing virtual network (VNet)
- C. Cloud NGFW integrated into the existing virtual network (VNet) design
- D. Distributed VM-Series NGFW in a new virtual network (VNet)

Answer: C

Explanation:
Cloud NGFW integrated into the existing VNet design improves resilience and reduces operational overhead because it delivers managed, cloud-native firewall protection directly for Azure VNet traffic without the customer having to operate and scale VM-based firewall infrastructure. Palo Alto Networks documents Cloud NGFW for Azure as protecting Azure Virtual Network traffic

through centrally managed rulestacks, which aligns with the need for simpler operations while supporting a growing cloud-first environment

NEW QUESTION # 33
.....

The great advantage of our Palo Alto Networks NetSec-Architect study prep is that we offer free updates for one year long. On one hand, these free updates can greatly spare your money since you have the right to free download Palo Alto Networks Network Security Architect real dumps as long as you need to. On the other hand, we offer this after-sales service to all our customers to ensure that they have plenty of opportunities to successfully pass their NetSec-Architect Actual Exam and finally get their desired certification of NetSec-Architect practice materials.

VCE NetSec-Architect Exam Simulator: https://www.pdf4test.com/NetSec-Architect-dump-torrent.html

Beside, you will enjoy one year free update after purchasing our Palo Alto Networks NetSec-Architect training material, Send emails to us, They are first rank elites with progressive thoughts and experience about the exam over ten years long, with the help of Palo Alto Networks NetSec-Architect actual real materials you can totally be confident and trust us fully, If we release new version for the NetSec-Architect prep materials, we will notify buyers via email for free downloading.

What Education Is About, We are already seeing activity on some of the developer blogs about Joomla, Beside, you will enjoy one year free update after purchasing our Palo Alto Networks NetSec-Architect Training Material.

Top NetSec-Architect Exam Dumps.zip - Unparalleled & Useful NetSec-Architect Materials Free Download for Palo Alto Networks NetSec-Architect Exam

Send emails to us, They are first rank elites with progressive thoughts and experience about the exam over ten years long, with the help of Palo Alto Networks NetSec-Architect actual real materials you can totally be confident and trust us fully.

If we release new version for the NetSec-Architect prep materials, we will notify buyers via email for free downloading, Leading products among peers.
