## Professional AD0-E124 VCE Exam Simulator - 100% Pass AD0-E124 Exam

They are all masterpieces from professional experts and all content are accessible and easy to remember, so no need to spend a colossal time to practice on them. Just practice with our AD0-E124 exam guide on a regular basis and desirable outcomes will be as easy as a piece of cake. On some tricky questions, you don't need to think too much. Only you memorize our questions and answers of AD0-E124 study braindumps, you can pass exam simply. With our customer-oriented AD0-E124 actual question, you can be one of the former exam candidates with passing rate up to 98 to 100 percent.

## Adobe Experience Manager DevOps Engineer Expert Sample Questions (Q41-Q46):

NEW QUESTION # 41

A developer needs a custom URL when previewing a page on AEM as a Cloud Service that differs from publish. How should the DevOps engineer configure the OSGI setting?

- A. `/apps/<my-site>/config.preview`

```
{
  "publish.url": "preview.site.com"
}
```
- **B. `/apps/<my-site>/config.publish`**

```
{
  "preview.url": "preview.site.com"
}
```
- C. `/apps/<my-site>/config/publish`

```
{
  "preview.url": "preview.site.com"
}
```
- D. `/apps/<my-site>/config/preview`

```
{
  "publish.url": "preview.site.com"
}
```

**Answer: B**

#### NEW QUESTION # 42

An html page is published and is accessible through the dispatcher. A client is trying to access the updated page but is not getting the updated content.

A rule `/type "allow" /glob "*.html"` is present in the dispatcher `/cache /rules` configuration. The HTTP header `"Cache-Control: max-age=3600"` is set for all requests with the html extension. The `/invalidate` section is not set in the dispatcher configuration. A flush agent is configured on the publish instance. A CDN is serving all static content including html files and was flushed manually. Why does the content fail to update on the client side?

- A. The flush occurred before the content was replicated because there are a lot of items in the queue.
- **B. The file was cached on the client side in the browser cache.**
- C. There is no `/invalidate` section present in the dispatcher configuration to invalidate the updated content.
- D. The content is still cached in the dispatcher after the CDN flush.

**Answer: B**

#### NEW QUESTION # 43

A DevOps engineer needs to delete an SSL certificate from Cloud Manager. What should the DevOps engineer do?

- A. Open a support ticket via the Admin Console to have the SSL certificate removed from Cloud Manager.
- B. Disable the SSL certificate via the Cloud Manager UI, then delete the certificate.
- **C. Remove all domain names associated with the SSL certificate, then delete the certificate.**
- D. Archive the SSL certificate instead of deleting it.

**Answer: C**

#### NEW QUESTION # 44

A DevOps engineer needs to set up a service-oriented integration with Adobe Target in Adobe I/O CLI. Which authentication method should be used?

- A. JWT
- B. Basic auth
- **C. OAuth 2.0**

**Answer: C**

Explanation:

For headless, service-to-service integrations via Adobe I/O (Adobe Developer Console), JWT (JSON Web Tokens) was historically the standard. However, Adobe officially deprecated the Service Account (JWT) credentials in favor of the new OAuth 2.0 Server-to-Server credential implementation. Because Adobe exams are updated to reflect current platform deprecations and best practices, OAuth 2.0 is the correct, modern standard for programmatic authentication without a user interface.

#### NEW QUESTION # 45

Significant load occurs during peak traffic hours with intermittent 503 responses from AEM publish instances. The DevOps engineer identifies that there is an AEM core component (Image) that creates renditions generated on request from large source files that range over 10 MB.

What should the DevOps engineer do?

- A. Increase Dispatcher memory size.
- B. Verify rewrite rules in site virtual host.
- C. Restart apache process on Dispatcher(s).
- D. Check if path is allowed in cache rules.

**Answer: D**

Explanation:

Intermittent 503 Service Unavailable errors on publish instances during peak traffic, specifically tied to heavy image rendition generation, indicate that the Publish servers' CPUs are being overwhelmed by repetitive processing. In AEM, these dynamic renditions should only be generated once and then cached by the Dispatcher. If the load is hitting the publish tier constantly, it means the Dispatcher is not caching those rendition requests. The DevOps engineer must check the /rules section under /cache in the dispatcher farm configuration to ensure that the URL patterns for these image renditions are permitted to be cached.

#### NEW QUESTION # 46

.....

Learning is just a part of our life. We do not hope that you spend all your time on learning the AD0-E124 certification materials. Life needs balance, and productivity gives us a sense of accomplishment and value. So our AD0-E124 real exam dumps have simplified your study and alleviated your pressure from study. Also, the windows software will automatically generate a learning report when you finish your practices of the AD0-E124 Real Exam dumps, which helps you to adjust your learning plan. It is crucial that you have formed a correct review method. The role of our AD0-E124 test training is optimizing and monitoring your study. Sometimes you have no idea about your problems. So you need our AD0-E124 real exam dumps to promote your practices.
