P.S. Free 2026 Salesforce Identity-and-Access-Management-Architect dumps are available on Google Drive shared by Pass4suresVCE: [https://drive.google.com/open?id=1w90RfL5EmmB\\_N7JKqf8Ms\\_lXwRs0jV56](https://drive.google.com/open?id=1w90RfL5EmmB_N7JKqf8Ms_lXwRs0jV56)

There are three versions of our Identity-and-Access-Management-Architect study questions on our website: the PDF, Software and APP online. And our online test engine and the windows software of the Identity-and-Access-Management-Architect guide materials are designed more carefully. During our researching and developing, we always obey the principles of conciseness and exquisiteness. All pages of the Identity-and-Access-Management-Architect Exam simulation are simple and beautiful. As long as you click on them, you can find the information easily and fast.

Salesforce Identity-and-Access-Management-Architect certification is a valuable credential for professionals who want to advance their careers in the Salesforce ecosystem. Salesforce Certified Identity and Access Management Architect certification demonstrates that the candidate has the skills and knowledge to design and deploy secure and scalable identity and access management solutions for Salesforce customers. It also validates the candidate's expertise in implementing best practices for authentication, authorization, and data security. With this certification, professionals can showcase their skills to potential employers and open up new career opportunities in the Salesforce ecosystem.

To qualify for the Salesforce Certified IAM Architect certification, candidates must have a deep understanding of the Salesforce platform, as well as experience in designing and implementing complex identity and access management solutions. Candidates must also have a strong understanding of industry best practices, standards, and regulations related to identity and access management.

Identity-and-Access-Management-Architect Exam consists of multiple-choice questions that evaluate the candidate's knowledge and understanding of core concepts and practices related to IAM. Passing Identity-and-Access-Management-Architect exam demonstrates that the candidate has the expertise required to design and implement secure and scalable IAM solutions on the Salesforce platform, thus providing a valuable credential for professionals seeking to advance their careers in this field.

## Salesforce Certified Identity and Access Management Architect exam certification & Identity-and-Access-Management-Architect exam reviews

There is no doubt they are clear-cut and easy to understand to fulfill your any confusion about the exam. Our Salesforce Certified Identity and Access Management Architect exam question is applicable to all kinds of exam candidates who eager to pass the exam. Last but not the least, they help our company develop brand image as well as help a great deal of exam candidates pass the exam with passing rate over 98 percent of our Identity-and-Access-Management-Architect real exam materials. Considering many exam candidates are in a state of anguished mood to prepare for the Salesforce Certified Identity and Access Management Architect exam, our company made three versions of Identity-and-Access-Management-Architect Real Exam materials to offer help. All these variants due to our customer-oriented tenets. As a responsible company over ten years, we are trustworthy. In the competitive economy, this company cannot remain in the business for long.

## Salesforce Certified Identity and Access Management Architect Sample Questions (Q45-Q50):

### NEW QUESTION # 45

Universal Containers (UC) currently uses Salesforce Sales Cloud and an external billing application. Both Salesforce and the billing application are accessed several times a day to manage customers. UC would like to configure single sign-on and leverage Salesforce as the identity provider. Additionally, UC would like the billing application to be accessible from Salesforce. A redirect is acceptable.

Which two Salesforce tools should an identity architect recommend to satisfy the requirements?

Choose 2 answers

- A. salesforce Canvas
- B. Identity Connect
- C. Connected Apps
- D. App Launcher

Answer: A,D

### NEW QUESTION # 46

Universal containers(UC) wants to integrate a third-party reward calculation system with salesforce to calculate rewards. Rewards will be calculated on a schedule basis and update back into salesforce. The integration between Salesforce and the reward calculation system needs to be secure. Which are the recommended best practices for using OAuth flows in this scenario? Choose 2 answers

- A. OAuth Username-password flow
- B. OAuth refresh token flow
- C. OAuthjwt bearer token flow
- D. OAuth SAML bearer assertion flow

Answer: B,C

Explanation:

OAuth refresh token flow and OAuth JWT bearer token flow are the recommended best practices for using OAuth flows in this scenario. These flows are suitable for server-to-server integration scenarios where the client application needs to access Salesforce resources on behalf of a user. The OAuth refresh token flow allows the client application to obtain a long-lived refresh token that can be used to request new access tokens without requiring user interaction. The OAuth JWT bearer token flow allows the client application to use a JSON Web Token (JWT) to assert its identity and request an access token. Both flows provide a secure and efficient way to integrate with Salesforce and the reward calculation system. OAuth SAML bearer assertion flow is not a recommended best practice for using OAuth flows in this scenario because it requires the client application to obtain a SAML

assertion from an identity provider, which adds an extra layer of complexity and dependency. OAuth username-password flow is not a recommended best practice for using OAuth flows in this scenario because it requires the client application to store the user's credentials, which poses a security risk and does not support two-factor authentication. References: [Which OAuth Flow to Use] : [Digging Deeper into OAuth 2.0 on Force.com] : [OAuth 2.0 JWT Bearer Token Flow] : [OAuth 2.0 SAML Bearer Assertion Flow] : [OAuth 2.0 Username-Password Flow]

#### NEW QUESTION # 47

How should an Architect force user to authenticate with Two-factor Authentication (2FA) for Salesforce only when not connected to an internal company network?

- A. Use an Apex Trigger on the UserLogin object to detect the user's IP address and prompt for 2FA if needed.
- B. Add the list of company's network IP addresses to the Login Range list under 2FA Setup.
- C. Apply the "Two-factor Authentication for User Interface Logins" permission and Login IP Ranges for all Profiles.
- **D. Use Custom Login Flows with Apex to detect the user's IP address and prompt for 2FA if needed.**

**Answer: D**

Explanation:

Explanation

Using Custom Login Flows with Apex is the best option to force users to authenticate with 2FA for Salesforce only when not connected to an internal company network. Custom Login Flows allow admins to customize the login process for different scenarios and user types<sup>2</sup>. Apex code can be used to detect the user's IP address and prompt for 2FA if it is not within the company's network range<sup>3</sup>. The other options are not suitable because they either do not support 2FA or do not allow conditional logic based on the user's IP address.

#### NEW QUESTION # 48

Northern Trail Outfitters recently acquired a company. Each company will retain its Identity Provider (IdP).

Both companies rely extensively on Salesforce processes that send emails to users to take specific actions in Salesforce.

How should the combined companies' employees collaborate in a single Salesforce org, yet authenticate to the appropriate IdP?

- A. Configure unique MyDomains for each company and have generated links use the appropriate MyDomain in the URL.
- **B. Enable each IdP as a login option in the My Domain Authentication Service settings. Users will then click on the appropriate IdP button.**
- C. Have generated links be prefixed with the appropriate IdP URL to invoke an IdP-initiated Security Assertion Markup Language flow when clicked.
- D. Have generated links append a querystring parameter indicating the IdP. The login service will redirect to the appropriate IdP.

**Answer: B**

Explanation:

When multiple identity providers must coexist in one Salesforce org, the standard pattern is to surface them through My Domain authentication settings so users can authenticate against the correct IdP. That is particularly important when generated email links bring users back into Salesforce and the org has to present the proper login options consistently. Rather than modifying every email with custom query logic or relying on IdP-initiated links, Salesforce can expose multiple login services at the domain level. This keeps the experience aligned with the org's authentication service configuration. In multi-IdP organizations, the identity architecture should steer users through the My Domain login service so the correct SSO path is available when they arrive from system-generated links. This is why option C is the best answer in Salesforce terms.

#### NEW QUESTION # 49

Universal Containers (UC) is building a custom Innovation platform on their Salesforce instance. The Innovation platform will be written completely in Apex and Visualforce and will use custom objects to store the Data. UC would like all users to be able to access the system without having to log in with Salesforce credentials. UC will utilize a third-party IdP using SAML SSO. What is the optimal Salesforce licence type for all of the UC employees?

- A. Identity Licence.
- B. Salesforce Licence.

- C. Salesforce Platform Licence.
- D. External Identity Licence.

Answer: C

## NEW QUESTION # 50

.....

Thousands of people are interested in earning the Salesforce Certified Identity and Access Management Architect (Identity-and-Access-Management-Architect) certification exam because it comes with multiple career benefits. Pass4suresVCE have designed a product that contains the Identity-and-Access-Management-Architect latest questions. These Salesforce Identity-and-Access-Management-Architect Exam Dumps are ideal for applicants who have a short time and want to clear the Salesforce Certified Identity and Access Management Architect (Identity-and-Access-Management-Architect) exam for the betterment of their future.
