## Juniper Junos, Associate (JNCIA-Junos) Sample Questions (Q81-Q86):

### NEW QUESTION # 81

Which two statements apply to the Routing Engine functions? (Choose two.)

- A. It processes the transit traffic.
- B. It responds to ping and traceroute commands.
- C. It maintains the routing tables.
- D. It does not process routing updates.

**Answer: B,C**

Explanation:

The Routing Engine (RE) in Juniper Networks devices plays a critical role in the control plane operations.

One of its functions includes responding to network utility commands like ping and traceroute, which are essential for diagnosing network connectivity and path issues. Furthermore, the RE is responsible for maintaining the routing tables, which contain information about network paths and destinations. These tables are vital for making forwarding decisions but are distinct from the actual forwarding of packets, which is handled by the Packet Forwarding Engine (PFE).

### NEW QUESTION # 82

You are asked to configure your device running Junos OS to automatically archive your configuration upon commit. In this scenario, which two methods are supported by the Junos OS? (Choose two)

- A. HTTP
- B. FTP
- C. RCP
- D. SCP

**Answer: C,D**

Explanation:

Junos OS supports multiple methods for automatically archiving configurations upon commit. Two of the supported methods are SCP (Secure Copy Protocol) and RCP (Remote Copy Protocol). These methods can be configured to save the configuration files to a remote server automatically whenever a commit is made.

Reference:

"You can configure Junos OS to automatically archive the configuration using protocols such as SCP and RCP upon commit."

### NEW QUESTION # 83

What are two examples of exception traffic? (Choose two.)

- A. ping to the local device
- B. transit packets
- C. log messages
- D. routing updates

**Answer: C,D**

Explanation:

Exception traffic includes traffic that is not simply forwarded by the router but requires special handling, such as routing updates (B) and log messages (C). These types of traffic are processed by the router's control plane rather than just being forwarded through the data plane.

### NEW QUESTION # 84

Which prompt indicates that you are using configuration mode?

- A. #
- B. >
- C. \$
- D. %

## Answer: A

Explanation:

In Junos OS, the # prompt indicates that you are in configuration mode. This mode is used for making changes to the configuration of the device.

Reference: Juniper Networks CLI Modes

"The # prompt indicates that you are in configuration mode."

## NEW QUESTION # 85

Which type of device uses the destination IP address to forward packets?

- A. repeater
- B. hub
- C. Layer 2 switch
- D. Layer 3 router

## Answer: D

Explanation:

A Layer 3 router forwards packets based on the destination IP address. It operates at the network layer of the OSI model and uses routing tables to determine the best path for packet delivery. Unlike Layer 2 switches, which forward packets based on MAC addresses, routers handle logical addressing, making them crucial for inter-network communication.
