DOWNLOAD the newest ExamsLabs HPE7-A06 PDF dumps from Cloud Storage for free: <https://drive.google.com/open?id=1pRSedjZ59rgghagqjKGFVB49Oyeaebth>

Just the same as the free demo, we have provided three kinds of versions of our HP HPE7-A06 preparation exam, among which the PDF version is the most popular one. It is understandable that many people give their priority to use paper-based HPE7-A06 Materials rather than learning on computers, and it is quite clear that the PDF version is convenient for our customers to read and print the contents in our HPE Campus Access Switching Expert Written Exam HPE7-A06 study guide.

The HPE7-A06 practice test of ExamsLabs is created and updated after feedback from thousands of professionals. Additionally, we also offer up to free HPE7-A06 exam dumps updates. These free updates will help you study as per the HP HPE7-A06 latest examination content. Our valued customers can also download a free demo of our HP HPE7-A06 exam dumps before purchasing.

## **HP HPE7-A06 Exam Cram Review & HPE7-A06 Valid Braindumps**

To ensure a more comfortable experience for users of HPE7-A06 test material, we offer a thoughtful package. Not only do we offer free demo services before purchase, we also provide three learning modes of HPE7-A06 learning guide for users. With easy payment and thoughtful, intimate after-sales service, believe that our HPE7-A06 Exam Guide Materials will not disappoint users. Last but not least, our worldwide service after-sale staffs will provide the most considerable and comfortable suggestion on HPE7-A06 study prep for you in twenty-four hours a day, as well as seven days a week incessantly.

## **HPE Campus Access Switching Expert Written Exam Sample Questions**

## (Q88-Q93):

### NEW QUESTION # 88

Refer to the exhibit and cede sample.

What is the effect when you add the statement "neighbor 10.2.0.3 send-community both" to the ipv4 address family? (Select two.)

- A. It causes R1 to negotiate the ability to send and receive standard and extended communities with R2.
- B. It will cause existing BGP peering between R1 and R2 to flap.
- C. It causes R1 to negotiate for the ability to import and export all type-1 and type-2 communities with R2.
- D. The feature will be enabled without consequence to the R1 established session with R2.
- E. It causes R1 to allow the exchange of communities with NLRI records in both inbound and outbound direction

**Answer: A,B**

Explanation:

The question asks for the effects of adding the command neighbor 10.2.0.3 send-community both to the BGP configuration under the IPv4 address family context for neighbor R2 (10.2.0.3) on router R1.

\* send-community both: This command instructs R1 to send both standard (RFC 1997) and extended (RFC 4360) BGP community attributes to neighbor R2. By default, communities are not sent.

\* BGP Capability Negotiation: Adding or changing features like community advertisement modifies the BGP capabilities exchanged between neighbors during session establishment. Any change to these capabilities requires the BGP session to be reset (flap) so that the peers can renegotiate using the new capabilities.

\* Analysis of Options (Select Two):

\* A: Correct (partially). It enables R1 to send standard and extended communities. The ability to receive depends on the peer and local config. The capability is negotiated upon session reset.

\* B: Incorrect. Changing capabilities requires the session to flap; it's not without consequence.

\* C: Incorrect. It primarily enables outbound sending from R1. Inbound acceptance is implicit if the neighbor is activated.

\* D: Correct. Modifying BGP neighbor capabilities, such as enabling send-community, necessitates a BGP session reset (flap) for the change to take effect.

\* E: Incorrect terminology ("import/export", "type-1/type-2 communities").

\* Conclusion: The command enables R1 to send communities (A describes the purpose/capability), and adding this command to an existing session will cause the session to flap for renegotiation (D describes the immediate consequence).

References: RFC 1997, RFC 4360, AOS-CX BGP Configuration Guide (communities, neighbor configuration). This relates to the "Routing" (16%) objective.

### NEW QUESTION # 89

Acme is having BGP issues with its AOS-CX switch and has asked you to help troubleshoot the issue. You have access to the CLI of the switch. Which command can you use to begin troubleshooting?

- A. show debug destinations
- B. show debug start
- C. show run | route destination!
- D. show buffer | debug

**Answer: A**

Explanation:

The question involves troubleshooting BGP issues on an AOS-CX switch, and the task is to identify the appropriate CLI command to begin the troubleshooting process.

\* Analysis of Options:

\* Option A (show run | route destination): Incorrect syntax; the show running-config command with a filter is not specific to BGP troubleshooting.

\* Option B (show debug start): Incorrect; AOS-CX does not use show debug start for initiating debugging.

\* Option C (show buffer | debug): Incorrect; this is not a valid AOS-CX command for BGP troubleshooting.

\* Option D: Correct. The show debug destinations command displays the current debug settings, including whether BGP debugging is enabled, which is a critical first step in troubleshooting BGP issues.

\* Why Option D is Correct: To troubleshoot BGP issues, the first step is to verify if debugging is enabled for BGP events, as this provides detailed logs of session states, messages, and errors. The show debug destinations command on AOS-CX switches shows which debug types (e.g., BGP) are active and where logs are sent (e.g., console, syslog). If BGP debugging is not enabled, the administrator can enable it using debug bgp to capture relevant information, making this the ideal starting point for BGP

troubleshooting.

\* Relevance to Certification Objectives:

\* Troubleshooting (10%): Involves performing advanced troubleshooting of routing protocols like BGP.

\* Routing (16%): Includes diagnosing BGP session and configuration issues.

References:

HPE Aruba Networking AOS-CX Configuration Guide: Debugging and Logging, detailing debug commands.

HPE7-A06 Study Guide: Covers BGP troubleshooting workflows.

HPE Aruba Networking Technical Documentation: AOS-CX CLI Reference, explaining show debug destinations.

### NEW QUESTION # 90

Refer to the exhibit.

Based on the screenshot, what is required to bring the secondary switch MCLAG interfaces online?

- A. Use the same ServiceOS version as on the primary.
- **B. Use the same CX OS version as on the primary.**
- C. Update the NAE agents on the secondary.
- D. Use vsx-software-upgrade on the secondary.

**Answer: B**

Explanation:

The error messages (sw\_image\_version\_mismatch\_error) in the VSX status output indicate that the primary (GL.10.09.0010) and secondary (GL.10.11.1021) switches are running different AOS-CX software versions. For VSX peers to synchronize and bring MCLAG interfaces online, both devices must run the same AOS-CX software version.

### NEW QUESTION # 91

Match the network technology to the customer requirement.

**Answer:**

Explanation:

\* Establish redundant links between the aggregation and core layers: When using Layer 3 routing between network layers (like Aggregation and Core), ECMP (Equal Cost Multi-Path) allows the routing protocol (e.g., OSPF, BGP) to utilize multiple links simultaneously if they have the same routing cost. This provides both redundancy (if one link fails, traffic uses the others) and load sharing across the links.

References: AOS-CX IP Routing Guide (OSPF, BGP, ECMP). Relates to "Routing" (16%), "Network Resiliency and virtualization" (8%).

Extend layer 2 across multiple sites: VXLAN (Virtual Extensible LAN) is the overlay technology specifically designed for this purpose. It encapsulates Layer 2 Ethernet frames within UDP packets, allowing them to be tunneled across an underlying Layer 3 network infrastructure, effectively stretching Layer 2 domains (VLANs) between physically separate locations.

References: AOS-CX VXLAN Guide. Relates to "Switching" (19%), "Connectivity" (9%).

Identify individual layer 2 segments in an overlay: Inside the VXLAN header, the VNI (VXLAN Network Identifier) serves as the segment identifier. Each unique Layer 2 segment (like a specific VLAN being extended) is mapped to a unique 24-bit VNI, allowing the overlay network to differentiate between traffic belonging to different L2 domains, even when tunneled between the same VTEPs (VXLAN Tunnel Endpoints).

References: AOS-CX VXLAN Guide, RFC 7348 (VXLAN). Relates to "Switching" (19%), "Connectivity" (9%).

Minimize configuration steps to establish tunnels between sites: While VXLAN provides the data plane encapsulation, EVPN (Ethernet VPN) acts as the modern control plane for VXLAN overlays. Using MP-BGP extensions, EVPN dynamically discovers VTEPs and advertises MAC address and IP reachability information. This significantly reduces configuration complexity compared to older static VXLAN or flood- and-learn methods, as VTEP peer relationships and endpoint learning are automated by the control plane, thus minimizing manual steps to establish connectivity.

References: AOS-CX EVPN Guide. Relates to "Routing" (16%), "Switching" (19%), "Connectivity" (9%).

### NEW QUESTION # 92

A gateway cluster with AOS-10 is managed by HPE Aruba Networking Central. In a failover, what is the expected behavior of the client traffic?

- A. Client IPv4 multicast session failover is not supported.
- B. Client state synchronization is supported on the first failover.
- **C. Client state synchronization is supported on each failover.**
- D. Client traffic is disrupted during the AP bootstrap.

**Answer: C**

Explanation:

In an AOS-10 gateway cluster managed by Aruba Central, client state synchronization is supported on each failover. This means session and tunnel information is preserved across failovers, minimizing client disruption. The design ensures seamless traffic continuity without requiring re-authentication or session rebuilds, making option B the correct behavior.

## NEW QUESTION # 93

.....

To make sure that our customers who are from all over the world can understand the content of the HPE7-A06 exam questions, our professionals try their best to simplify the questions and answers and add some explanations to make them more vivid. So you will find that the unique set of our HPE7-A06 Practice Guide is the easiest and containing the most rewarding content, you can never found on any other website. And you will love our HPE7-A06 learning materials as long as you have a try on them!

**HPE7-A06 Exam Cram Review:** <https://www.examslabs.com/HP/Aruba-Certified-Professional-Campus-Access/best-HPE7-A06-exam-dumps.html>

It will lead to your convenience while preparing for the HPE Campus Access Switching Expert Written Exam (HPE7-A06) certification test, With applying the international recognition third party for the payment, if you buying HPE7-A06 exam braindumps from us, and we can ensure the safety of your money and account, HP HPE7-A06 Exam Cram Review is a powerful professional and is still one of the best certificates, HP Latest HPE7-A06 Demo Extremely high quality, pass rate as well as hit rate.

If you'd like to take an active role in helping your community prepare for emergencies, join Citizen Corps, Mozilla Address Book, It will lead to your convenience while preparing for the HPE Campus Access Switching Expert Written Exam (HPE7-A06) certification test.

## Get Excellent Latest HPE7-A06 Demo and Pass Exam in First Attempt

With applying the international recognition third party for the payment, if you buying HPE7-A06 exam braindumps from us, and we can ensure the safety of your money and account.

HP is a powerful professional and is still one of the best certificates, Extremely high quality, pass rate as well as hit rate, Select ExamsLabs HPE7-A06 exam material, so that you do not need to waste your money and effort.
