It is ideal for users who prefer offline Administering Windows Server Hybrid Core Infrastructure (AZ-800) exam practice. This format is supported by Windows computers and laptops. You can easily install this software in your system to use it anytime to prepare for the examination.

Microsoft Administering Windows Server Hybrid Core Infrastructure Sample Questions (Q94-Q99):

NEW QUESTION # 94

Your network contains two Active Directory forests and a domain trust as shown in the following exhibit.

- The domain trust has the following configurations:
- * Name: adatum.com
 - * Type: External
 - * Direction: One-way, outgoing
 - * Outgoing trust authentication level: Domain-wide authentication

Name	Domain
User1	adatum.com
User2	contoso.com
User3	east.contoso.com

The forests contain the network shares shown in the following table.

Name	In domain
Share1	adatum.com
Share2	contoso.com
Share3	east.contoso.com

For each of the following statements, select Yes if the statement is true. Otherwise, select No. NOTE: Each correct selection is worth one point.

Answer Area

Statements	Yes	No
User1 can be assigned permissions for Share3.	<input type="radio"/>	<input type="radio"/>
User2 can be assigned permissions for Share1.	<input type="radio"/>	<input type="radio"/>
User3 can be assigned permissions for Share1.	<input type="radio"/>	<input type="radio"/>

Answer:

Explanation:

Answer Area

Statements

User1 can be assigned permissions for Share3.

Yes

No

User2 can be assigned permissions for Share1.

User3 can be assigned permissions for Share1.

NEW QUESTION # 95

You need to configure network communication between the Seattle and New York offices. The solution must meet the networking requirements.

What should you configure? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

On a Virtual WAN hub:

- An ExpressRoute gateway
- A virtual network gateway
- An ExpressRoute circuit connection

In the offices:

- An ExpressRoute circuit connection
- A Site to-Site VPN
- An Azure application gateway
- An on premises data gateway

Answer:

Explanation:

On a Virtual WAN hub:

- An ExpressRoute gateway
- A virtual network gateway
- An ExpressRoute circuit connection

In the offices:

- An ExpressRoute circuit connection
- A Site to-Site VPN
- An Azure application gateway
- An on premises data gateway

NEW QUESTION # 96

Your network contains an Active Directory Domain Services (AD DS) domain. The domain contains a user named User1. User1 is a member of a group named Group1 and is in an organizational unit (OU) named OU1.

The domain has minimum password lengths configured as shown in the following table.

Value	Location
10	Default Domain Policy
12	Default Domain Controllers Policy
8	Group Policy linked to OU1
14	Password settings object applied to Group1
7	Password settings object applied to User1

What is the minimum password length that User1 should use when changing to a new password?

- A. 0
- B. 1
- C. 2
- D. 3
- E. 4

Answer: C

NEW QUESTION # 97

You have a server named Server1 that runs Windows Server and has the Hyper V server role installed. Server1 hosts a virtual machine named VM1.

Server1 has an NVMe storage device. The device is currently assigned to VM1 by using Discrete Device Assignment.

You need to make the device available to Server1.

Which four actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Actions

From Server1, stop VM1.

From Server1, run the Remove-VMAssignableDevice cmdlet.

From Server1, run the Mount-VMHostAssignableDevice cmdlet.

From Server1, enable the device by using Device Manager.

From VM1, disable the device by using Device Manager.

Answer Area

Answer:

Explanation:

Answer Area

From Server, stop VM1.

From Server1, run the Remove-VMHostAssignableDevice cmdlet.

From the Server1, run the Mount-VMHostAssignableDevice cmdlet.

From Server1, enable the device by using Device Manager.

- 1 - From Server, stop VM1.
- 2 - From Server1, run the Remove-VMHostAssignableDevice cmdlet.
- 3 - From the Server1, run the Mount-VMHostAssignableDevice cmdlet.
- 4 - From Server1, enable the device by using Device Manager.

NEW QUESTION # 98

Your on-premises network contains an Active Directory Domain Services (AD DS) domain. The domain contains the servers shown in the following table.

The domain controllers do NOT have internet connectivity.

You plan to implement Azure AD Password Protection for the domain.

You need to deploy Azure AD Password Protection agents. The solution must meet the following requirements:

- * All Azure AD Password Protection policies must be enforced.
- * Agent updates must be applied automatically.
- * Administrative effort must be minimized.

What should you do? To answer select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:
