

Providing You Valid New ZDTE Mock Exam with 100% Passing Guarantee

ZDTE EXAM: MCQs – Advanced Cyber-security Services Part 2| New Update Questions with 100% Correct Answers

What is the primary purpose of AI-Powered Cloud Browser Isolation?

- A) To completely block internet access
- B) To automatically isolate users from risky destinations
- C) To replace traditional firewall systems
- D) To monitor user browsing history

B) To automatically isolate users from risky destinations

How does Zscaler identify suspicious domains?

- A) Only through URL filtering
- B) By analyzing page structure, typosquatting, and brand imitation
- C) Using only hosting location
- D) Manually reviewing each website

B) By analyzing page structure, typosquatting, and brand imitation

In the context of data protection, what happens when an authentication request comes from an unmanaged device?

- A) The request is automatically denied
- B) The session is isolated in a containerized environment
- C) The device is quarantined
- D) The user is forced to use a specific browser

B) The session is isolated in a containerized environment

Services like quick downloading within five minutes, convenient and safe payment channels made for your convenience. Even newbies will be tricky about this process. Unlike product from stores, quick browse of our ZDTE practice materials can give you the professional impression wholly. So, they are both efficient in practicing and downloading process. By the way, we also have free demo as freebies for your reference to make your purchase more effective.

Zscaler ZDTE Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Zscaler Architecture: Focuses on the overall design, components, and deployment models of the Zscaler platform.
Topic 2	<ul style="list-style-type: none">• Connectivity Services: Covers methods and technologies for connecting users and devices securely to the Zscaler cloud.
Topic 3	<ul style="list-style-type: none">• Identify Services: Explains how user identities are managed and integrated within Zscaler services.

Topic 4	<ul style="list-style-type: none"> • Cyberthreat Protection Services: Covers mechanisms for detecting, preventing, and mitigating cyber threats in real time.
Topic 5	<ul style="list-style-type: none"> • Zscaler Digital Experience: Covers monitoring and optimizing user experience across applications and network connections.
Topic 6	<ul style="list-style-type: none"> • Platform Services: Details the core platform functionalities that enable security, scalability, and reliability.
Topic 7	<ul style="list-style-type: none"> • Data Protection Services: Explains how sensitive data is secured, monitored, and managed within the platform.
Topic 8	<ul style="list-style-type: none"> • Access Control Services: Focuses on controlling and enforcing user access to applications and resources.
Topic 9	<ul style="list-style-type: none"> • Zscaler Zero Trust Automation: Explains automating security and access policies based on Zero Trust principles.

ZDTE Learning Materials: Zscaler Digital Transformation Engineer - ZDTE Actual Lab Questions

It is a truth well-known to all around the world that no pains and no gains. There is another proverb that the more you plough the more you gain. When you pass the ZDTE exam which is well recognized wherever you are in any field, then acquire the ZDTE certificate, the door of your new career will be open for you and your future is bright and hopeful. Our ZDTE guide torrent will be your best assistant to help you gain your ZDTE certificate.

Zscaler Digital Transformation Engineer Sample Questions (Q15-Q20):

NEW QUESTION # 15

Safemarch is a retail company with hundreds of stores across the United States. Their core applications reside in two different data centers with a considerable presence on AWS.

Which would be a good connectivity solution for them to access applications from store locations?

- A. SD-WAN connectivity to stores and Zscaler Edge, with App Connectors on-prem and on AWS.
- B. Site-to-site VPNs from stores to Zscaler Edge, with App Connectors on-prem and on AWS.
- C. Branch Connectors at stores with App Connectors on-prem and on AWS.
- D. Branch Connector at stores for Zscaler connectivity and Direct Connect from data centers to AWS.

Answer: A

Explanation:

For a large retail organization with hundreds of geographically distributed stores and applications split across multiple data centers plus AWS, Zscaler reference designs emphasize an SD-WAN-to-Zscaler Edge model combined with ZPA App Connectors deployed close to the applications. In this model, each store uses SD-WAN to build resilient, policy-based connectivity to the nearest Zscaler Edge locations. Those edges then provide secure, optimized access to private applications published through App Connectors installed in the on-premises data centers and within AWS VPCs.

This approach centralizes security and access control in the Zscaler cloud while avoiding the operational burden of managing hundreds of direct site-to-site VPNs. It also aligns with Zero Trust principles by steering all store traffic to Zscaler rather than extending the corporate network to every store. Direct Connect between data centers and AWS (as in option A) is optional from a ZPA perspective because App Connectors in AWS communicate outbound to Zscaler over the internet. Branch Connector (option D) is typically used when SD-WAN or suitable edge devices are not present, whereas a large retail environment commonly standardizes on SD-WAN.

NEW QUESTION # 16

Which set of protocols was developed to provide the most secure passwordless authentication methods, using services such as

Windows Hello and YubiKey?

- A. SCIM
- B. OpenID
- **C. Fast Identity Online 2 (FIDO2)**
- D. SAML

Answer: C

Explanation:

FIDO2 (Fast Identity Online 2) is a family of open authentication standards designed specifically to enable strong, phishing-resistant, passwordless authentication. It combines the WebAuthn standard (for browsers and web applications) with the CTAP protocol (for communicating with authenticators such as security keys).

Vendors like Microsoft explicitly describe Windows Hello and FIDO2 security keys as passwordless sign-in mechanisms, and Yubico likewise highlights FIDO2 support on YubiKey devices for passwordless and multi-factor authentication.

Zscaler's identity-related documentation and partner guides reference FIDO2 and passwordless methods such as Windows Hello for Business and FIDO2-based passkeys as modern options that integrate with identity providers (e.g., Microsoft Entra ID / Azure AD) and can be used for Zscaler authentication flows.

By contrast, SCIM is a provisioning standard for user and group lifecycle management, not an authentication protocol. OpenID (and OpenID Connect) and SAML are federation and SSO protocols that typically still rely on passwords or existing credentials at the identity provider, even though they may be used alongside MFA.

Only FIDO2 is purpose-built for secure, hardware- or device-bound, passwordless authentication with biometrics or secure PINs, which is exactly what the question describes with examples like Windows Hello and YubiKey.

NEW QUESTION # 17

Which connectivity service provides branches, on-premises data centers, and public clouds with fast and reliable internet access while enabling private applications with a direct-to-cloud architecture?

- A. Zscaler Browser Access
- B. Zscaler App Connector
- C. Zscaler Privileged Remote Access
- **D. Zscaler Zero Trust SD-WAN**

Answer: D

Explanation:

Zscaler Zero Trust SD-WAN is specifically designed to give branches, on-premises data centers, and workloads running in public clouds fast, reliable, and secure access to the internet and private applications using a direct-to-cloud architecture. In the Zscaler Digital Transformation Engineer curriculum, this service is positioned as the connectivity foundation that replaces legacy hub-and-spoke MPLS and VPN designs with cloud-delivered Zero Trust connectivity.

Instead of backhauling traffic to central data centers, branches and sites establish lightweight, policy-driven tunnels directly to the Zscaler cloud, where security inspection and Zero Trust access decisions are applied.

This architecture reduces latency, simplifies routing, and optimizes SaaS and internet performance while simultaneously enabling secure access to private applications without exposing them to the public internet.

App Connectors (option C) are used for application-side connectivity in ZPA, not for full branch or data center connectivity.

Browser Access (option B) provides clientless application access for users, not network-level site connectivity. "Zscaler Privileged Remote Access" (option A) is not the term used for this broad connectivity service. Therefore, the only option that matches the described direct-to-cloud, multi-site connectivity role is Zscaler Zero Trust SD-WAN.

NEW QUESTION # 18

What is one key benefit of deploying a Private Service Edge (PSE) in a customer's data center or office locations?

- **A. It provides Zero Trust Network Access policies locally, improving user experience and reducing latency.**
- B. It eliminates the need to use Zero Trust Network Access (ZTNA) policies for internal applications.
- C. It allows users to access private applications without encryption overhead for increased performance.
- D. It replaces the need for a Zscaler App Connector in the environment and simplifies the network.

Answer: A

Explanation:

The ZDTE study content groups Private Service Edge under Advanced Platform Services, explaining that PSEs host the same Zero Trust Exchange policy and inspection engines, but run as customer-managed service edges inside data centers or large offices. They are designed to give on-premises users a "local on-ramp" to ZIA and ZPA services while still enforcing full zero-trust policy. The documentation emphasizes that PSEs do not replace App Connectors for ZPA; connectors are still required to establish inside-out application connectivity. Nor do PSEs remove the need for ZTNA policies- those policies remain central and are simply enforced closer to the user. Encryption is also preserved end-to- end; there is no "unencrypted fast path" described in the reference architecture.

Instead, the primary benefit highlighted is performance and user experience: by enforcing ZIA/ZPA policies at a local PSE rather than a distant public service edge, organizations reduce round-trip latency and keep traffic on optimal paths while maintaining identical security and access controls.

NEW QUESTION # 19

Which of the following external IdPs is unsupported by OIDC with Zscaler ZIdentity?

- A. Auth0
- B. OneLogin
- C. PingOne
- D. Microsoft AD FS

Answer: D

Explanation:

The ZIdentity documentation on external identity providers explains that Zscaler supports various third-party IdPs over SAML and OIDC, and then provides specific configuration guides for each provider. For PingOne, Auth0, and OneLogin, the ZIdentity help explicitly describes configuring each as an OpenID Provider (OP) for ZIdentity, clearly stating that they are used to provide SSO via OpenID Connect (OIDC).

By contrast, the ZIdentity guides for Microsoft AD FS consistently describe configuring AD FS "as the SAML Identity Provider (IdP) for ZIdentity," and the examples focus on SAML assertions, claim rules, and certificate bindings-not OIDC flows. In other words, AD FS is supported in a SAML mode with ZIdentity, but it is not listed among the IdPs configured as OpenID Providers for OIDC-based integrations.

The Digital Transformation Engineer identity modules reinforce this differentiation by mapping external IdPs to either OIDC or SAML in the ZIdentity configuration, and the hands-on labs use Azure/Microsoft Entra ID or PingOne for OIDC examples, while AD FS is shown only in SAML scenarios.

Therefore, among the options listed, Microsoft AD FS is the external IdP that is unsupported by OIDC with Zscaler ZIdentity, making option C the correct answer.

NEW QUESTION # 20

.....

You have seen CertkingdomPDF's Zscaler ZDTE Exam Training materials, it is time to make a choice. You can choose other products, but you have to know that CertkingdomPDF can bring you infinite interests. Only CertkingdomPDF can guarantee you 100% success. CertkingdomPDF allows you to have a bright future. And allows you to work in the field of information technology with high efficiency.
