2026 Professional AD0-E725 Premium Exam Help You Pass AD0-E725 Easily

Our AD0-E725 learning guide is very efficient tool in the world. As is known to us, in our modern world, everyone is looking for to do things faster, better, smarter, so it is no wonder that productivity hacks are incredibly popular. So we must be aware of the importance of the study tool. In order to promote the learning efficiency of our customers, our AD0-E725 Training Materials were designed by a lot of experts from our company. You can totally rely on our AD0-E725 study materials.

Adobe Commerce Developer Expert Sample Questions (Q23-Q28):

NEW QUESTION # 23

An Adobe Commerce Developer is tasked with adding a custom tax calculation to the checkout process. In addition to core tax calculations, a legacy code extending core tax calculation classes is also found. The Developer wants to utilize Magento's dependency injection system effectively to meet requirements, ensuring the solution works without modifying the existing core and legacy classes.

What should the Developer implement to achieve this?

- A. Constructor arguments
- B. Preferences
- C. Virtual types

Answer: C

Explanation:

The correct approach is Virtual types.

Virtual types allow developers to configure existing classes with different constructor arguments and create multiple variations of the same class without modifying the core or legacy code.

Preferences (C) would replace one class with another entirely, which could break the legacy functionality.

Constructor arguments (A) are part of DI but don't allow multiple variants of the same class like virtual types do.

NEW QUESTION # 24

An Adobe Commerce Developer is tasked with adding additional data to an order entity in REST API.

Remembering upgradability, which solution should the developer implement?

- A. Use extension attributes.
- B. Use API events.
- C. Use interceptor plugins.

Answer: A

NEW QUESTION # 25

A Developer working on a Magento 2 store needs to modify the Content Security Policy (CSP) to allow loading of images from a trusted external domain while maintaining strict policies for other resources. To accomplish this, the `csp_whitelist.xml` file must be updated.

Which code snippet should the Developer use to update the CSP configuration?

- A.

```
<policies>
<policy id="img-src">
<values>
<value id="trusted_image" type="host">website.com</value>
</values>
</policy>
</policies>
```
- B.

```
<policies>
<policy id="default-src">
<values>
<value id="trusted_image" type="host">website.com</value>
</values>
</policy>
</policies>
```
- C.

```
<csp>
<policies>
<policy id="media-src">
<values>
<value id="trusted_image" type="host">website.com</value>
</values>
</policy>
</policies>
</csp>
```

Answer: A

Explanation:

To allow loading of external images, the policy that must be updated is `img-src` in the `csp_whitelist.xml`.

Option A (default-src) is too broad and not best practice.
Option C (media-src) applies only to audio/video sources, not images.
Thus, B is the correct solution.

NEW QUESTION # 26

A multi-source merchant asks an Adobe Commerce Developer to prioritize inventory source selection based on shipping address and minimal delivery cost.
How should the Developer implement this task functionality?

- A. Configure Distance Priority Algorithm and implement PlaceReservationsForSalesEventInterface.
- B. Use Source Priority Algorithm and utilize GetSourceSelectionAlgorithmList.
- C. Register New Source Selection Algorithms via di.xml and implement SourceSelectionInterface.

Answer: A

NEW QUESTION # 27

A Developer discovers that inline scripts are no longer working. This issue occurred after upgrading to the latest version of Adobe Commerce. When checking the console, the errors indicate that the scripts are not allowed to execute.

The following is an example script:

```
<div id="action-div" onclick="someComponent('title')>Action</div>
```

How should the Developer adapt the script to run properly according to security practices?

- A. `<?php echo $block->renderAllowedElement('<div id="action-div" onclick="someComponent(\'title\')">Action</div>'); ?>`
- B. `<?php echo $secureRenderer->renderEventListenerAsTag('onclick', 'someComponent(\'title\')', '#action-div'); ?>`
- C. `<?php echo $escaper->renderSecureTag('<div id="action-div" onclick="someComponent(\'title\')">Action</div>'); ?>`

Answer: B

Explanation:

Since Magento 2.3.5, inline JavaScript is restricted by default due to stricter Content Security Policy (CSP) enforcement.

Developers must use the SecureHtmlRenderer class to safely render inline event listeners.

Option C correctly uses \$secureRenderer->renderEventListenerAsTag() to safely attach the onclick event listener to #action-div.

Options A and B are invalid or unsupported for this purpose.
