Free PDF 2026 Useful Fortinet Valid NSE5_FWB_AD-8.0 Mock Exam

Our NSE5_FWB_AD-8.0 learning guide is for the world and users are very extensive. In order to give users a better experience, we have been constantly improving. The high quality and efficiency of NSE5_FWB_AD-8.0 exam prep has been recognized by users. The high passing rate of our NSE5_FWB_AD-8.0 test materials are its biggest feature. As long as you use NSE5_FWB_AD-8.0 Exam Prep, you can certainly harvest what you want thing. Not only you can pass the NSE5_FWB_AD-8.0 exam in the shortest time, but also you can obtain the dreaming NSE5_FWB_AD-8.0 certification to have a brighter future.

Fortinet NSE 5 - FortiWeb 8.0 Administrator Sample Questions (Q61-Q66):

NEW QUESTION # 61

Which statement correctly differentiates FortiWeb's "signature-based detection" from "machine learning-based detection"?

- A. Signature-based detection requires no updates, while machine learning must be updated daily via FortiGuard.
- B. Signature-based detection is exclusively used for SSL, while machine learning is exclusively used for HTTP.
- C. Machine learning only works in offline protection mode, while signatures only work in reverse proxy mode.
- D. Signature-based detection matches traffic against known attack patterns, while machine learning detects anomalies by comparing traffic to a learned baseline of normal behavior.

Answer: D

Explanation:

Signature-based detection relies on a database of known attack patterns (updated via FortiGuard) to identify malicious requests, while machine learning-based detection builds a statistical model of normal application behavior and flags deviations, allowing it to catch novel or previously unseen attacks that lack a matching signature.

NEW QUESTION # 62

Refer to the exhibit.

EXHIBIT

```
info:
  version: 1.0.0
  title: FortiGate Restrictions
  description: Very limited schema for FortiGate UI
  license:
    name: Fortinet
servers:
- url: 'https://fortigate.com/'
paths:
  /ui:
    get:
      summary: Get UI items
      operationId: getui
      tags:
        - ui
      responses:
        "200":
          description: An array of UI information
          content:
            application/json:
              schema:
                type: string
```

What does the exhibit show?

- A. A sample response returned by the FortiGate API at <https://fortigate.com/ui>.
- B. The result of a show ui details command on a FortiWeb server.
- C. An API schema file.
- D. The FortiGate UI interface in HTML.

Answer: C

Explanation:

The exhibit is written in structured OpenAPI/YAML-style format. It includes fields such as info, version, title, servers, paths, HTTP method get, operationId, responses, content type application/json, and a schema definition. That is not HTML and it is not a live API response. It is also not CLI output from FortiWeb.

FortiWeb OpenAPI validation uses OpenAPI description files in YAML or JSON to define API structure, endpoints, parameters, and expected data types. FortiWeb then uses that uploaded schema as a baseline to validate API requests and block requests that do not conform. So the exhibit is best identified as an API schema file

NEW QUESTION # 63

Which situation best explains when a FortiWeb administrator should enable automatic HTTP-to- HTTPS redirection?

- A. The organization prefers to keep both HTTP and HTTPS available for flexibility.
- B. The back-end server uses only HTTP and cannot support encryption.
- C. Users are accessing a static website that does not handle sensitive data.
- D. The web application handles logins or personal data and must ensure encrypted communication.

Answer: D

Explanation:

Automatic HTTP-to-HTTPS redirection is appropriate when the application handles logins, personal data, or other sensitive information. It forces users onto encrypted HTTPS connections, helping protect credentials and data in transit before they interact with the application.

NEW QUESTION # 64

A user from group B sends 150 requests in one minute to this endpoint:

```
GET /api/v1/data HTTP/1.1
Host: example.com
Authorization: ApiKey abc123def456
```

Group B users are allowed access to only /api/v1/reports and are limited to 50 requests per minute. What should the FortiWeb administrator configure to stop this abuse?

- A. Move the user to group A to increase their limit.
- B. Nothing. They should allow the request because the API key is valid.
- C. Apply group-based rate limiting to restrict group B users to 50 requests per minute.
- D. Change the host to block access to /api/v1/data.

Answer: C

Explanation:

Group-based rate limiting enforces the allowed request threshold for group B users, limiting them to 50 requests per minute and preventing excessive API use even when the request includes a valid API key.

NEW QUESTION # 65

In a FortiWeb HA active-active configuration, which statement is accurate?

- A. Only one unit processes traffic while the other remains completely idle.
- B. Active-active requires manual failover initiated by the administrator.
- C. Active-active mode is only supported in transparent bridge mode.
- D. All members can process traffic simultaneously, improving throughput while still providing redundancy.

Answer: D

Explanation:

In an active-active HA deployment, multiple FortiWeb units share the traffic load simultaneously, increasing overall throughput while still providing failover redundancy if a member fails.

NEW QUESTION # 66

.....

Maybe there are so many candidates think the NSE5_FWB_AD-8.0 exam is difficult to pass that they be beaten by it. But now, you don't worry about that anymore, because we will provide you an excellent exam material. Our NSE5_FWB_AD-8.0 exam materials are very useful for you and can help you score a high mark in the test. It also boosts the function of timing and the function to simulate the NSE5_FWB_AD-8.0 Exam so you can improve your speed to answer and get full preparation for the test. Trust us that our NSE5_FWB_AD-8.0 exam torrent can help you pass the exam and find an ideal job.
