

1Z0-1111-25 Exam Dumps, 1Z0-1111-25 Authorized Exam Dumps

BONUS!!! Download part of ITExamSimulator 1Z0-1111-25 dumps for free: <https://drive.google.com/open?id=12P-1xFjZU2FITiMPBCZNkwmNO5-SJTdw>

They work together and analyze the examination content to compile most probable 1Z0-1111-25 real dumps in three formats. These Oracle Certification Exams questions will surely appear in the next Oracle 1Z0-1111-25 exam. Memorizing these Oracle 1Z0-1111-25 Valid Dumps will help you easily attempt the 1Z0-1111-25 exam within the allocated time. Thousands of aspirants have passed their 1Z0-1111-25 exam, and they all got help from our Oracle 1Z0-1111-25 updated exam dumps.

Oracle 1Z0-1111-25 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Monitor Cloud Environments with Metrics and Alarms: This section tests Oracle Cloud Operators' knowledge of configuring OCI Monitoring Service. It includes enabling metrics for resource monitoring, setting up alarms based on best practices, and responding to real-time changes in cloud environments to ensure system reliability.
Topic 2	<ul style="list-style-type: none">• Monitor Applications with Deep Visibility into End-User Experience: This domain tests the knowledge of Application Performance Engineers and DevOps Specialists in using OCI Application Performance Monitoring (APM). It includes instrumenting applications for data collection, analyzing performance metrics, visualizing distributed application components, and diagnosing issues across multi-tier architectures.
Topic 3	<ul style="list-style-type: none">• Centrally Manage and Visualize Log Data: This section assesses the abilities of Logging Analysts and Security Engineers in managing logs across an entire IT environment. It includes enabling log collection, creating connectors for log transitions, identifying log patterns, and visualizing logs for advanced analytics using OCI Logging Service.
Topic 4	<ul style="list-style-type: none">• Distinguish the Key Concepts of Logging Analytics: This section evaluates the expertise of Data Analysts and Troubleshooting Specialists in using OCI Logging Analytics. It covers log ingestion methods, searching and filtering logs, performing advanced analytics, and leveraging machine learning-powered insights for proactive issue resolution.

Oracle - 1Z0-1111-25 - Oracle Cloud Infrastructure 2025 Observability Professional –Efficient Exam Dumps

Our brand has marched into the international market and many overseas clients purchase our 1Z0-1111-25 study materials online. As the saying goes, Rome is not build in a day. The achievements we get hinge on the constant improvement on the quality of our 1Z0-1111-25 study materials and the belief we hold that we should provide the best service for the clients. The great efforts we devote to the 1Z0-1111-25 Study Materials and the experiences we accumulate for decades are incalculable. All of these lead to our success of 1Z0-1111-25 study materials and high prestige.

Oracle Cloud Infrastructure 2025 Observability Professional Sample Questions (Q55-Q60):

NEW QUESTION # 55

What are the two items required to create a rule for the Oracle Cloud Infrastructure (OCI) Events Service? (Choose two.)

- A. Actions
- B. Service Connector
- C. Install Key
- D. Rule Conditions
- E. Management Agent Cloud Service

Answer: A,D

Explanation:

To create a rule in the OCI Events Service, you need to define what triggers the rule and what happens when it's triggered. The two required components are:

Actions (B): These specify the tasks to perform when an event matches the rule (e.g., invoking a function, sending a notification, or streaming to a service). Without an action, the rule has no effect.

Rule Conditions (C): These define the criteria for matching events (e.g., event type like `com.oraclecloud.computeapi.launchinstance.end` or resource attributes). Conditions filter which events trigger the rule.

Why not A, D, or E?

Management Agent Cloud Service (A): This is unrelated to Events Service rules; it's for monitoring resources.

Install Key (D): This is used for agent installation, not event rules.

Service Connector (E): While it can work with Events Service, it's a separate service and not a required component of an event rule itself.

These two elements form the core of an OCI Events Service rule, enabling event-driven automation.

NEW QUESTION # 56

You are part of a team that manages a set of workload instances running in an on-premises environment. The Architect team is tasked with designing and configuring Oracle Cloud Infrastructure (OCI) Logging service to collect logs from these instances. There is a requirement to archive Info-level logging data of these instances into OCI Object Storage. Which two features of OCI can help you achieve this? (Choose two.)

- A. Service Connectors
- B. ObjectCollection Rule
- C. Cloud Agent Plugin Grouping Function
- D. Agent Configuration

Answer: A,B

Explanation:

To collect logs from on-premises instances and archive Info-level logs in OCI Object Storage, you need tools for log ingestion and data movement:

Service Connectors (A): This feature enables data transfer from OCI Logging (source) to Object Storage (target). You can configure a service connector with a filter (e.g., log level = Info) to archive only Info-level logs.

ObjectCollection Rule (D): Part of Logging Analytics, this rule collects logs from Object Storage buckets into Logging Analytics for analysis. If logs are first written to Object Storage by an agent, this rule ensures continuous ingestion.

Why not B or C?

Agent Configuration (B): Used to set up Management Agents but doesn't handle archiving to Object Storage.

Cloud Agent Plugin Grouping Function (C): This is not a valid OCI feature.

The workflow involves agents sending logs to Logging, Service Connectors filtering and moving them to Object Storage, and ObjectCollection Rules enabling further analysis.

NEW QUESTION # 57

You need to find the Log Group from a Log line using Oracle Cloud Infrastructure (OCI) Logging Service. Which section within a Log contains the Log Group's OCID?

- A. Source Section
- B. Data section
- C. Oracle section
- **D. Unified Envelope**

Answer: D

Explanation:

In OCI Logging, logs are wrapped in a Unified Envelope:

Unified Envelope (D): Contains metadata like logGroupId (the OCID of the Log Group), timeCreated, and compartmentId. This identifies the Log Group for each log entry.

Why not A, B, or C?

Source Section (A): Indicates log origin, not the group OCID.

Data section (B): Holds the log content, not metadata like OCID.

Oracle section (C): Not a valid log section.

The Unified Envelope standardizes log metadata.

NEW QUESTION # 58

From the following, select the different metric namespaces used for APM.

- A. RUM metrics, oracle_apm_monitoring, Oracle_apm_synthetic
- **B. oracle_apm_rum, oracle_apm_synthetics, and oracle_apm_monitoring**
- C. AjaxDownloadTime, TotalTraceCount, Oracle_pm_rum
- D. oracle_apm_monitoring namespace, synthetics, and monitoring

Answer: B

Explanation:

APM uses specific metric namespaces to categorize its telemetry data:

oracle_apm_rum, oracle_apm_synthetics, and oracle_apm_monitoring (D):

oracle_apm_rum: Metrics from Real User Monitoring (e.g., page load times).

oracle_apm_synthetics: Metrics from Synthetic Monitoring (e.g., test response times).

oracle_apm_monitoring: Metrics from distributed tracing (e.g., span counts).

These namespaces align with APM's three core features.

Why not A, B, or C?

A: Individual metric names, not namespaces.

B: Incomplete and incorrect namespace naming.

C: Mixes metric types with partial namespace names.

These namespaces enable targeted metric queries in OCI Monitoring.

NEW QUESTION # 59

You are working on a project to automate the deployment of Oracle Cloud Infrastructure (OCI) compute instances that are pre-configured with web services. As part of the deployment workflow, you also need to create a corresponding OCI object storage bucket bearing the same name as that of the compute instance. Which of these two options can help you achieve this requirement? (Choose two.)

- A. Oracle Functions
- B. Cloud Agent Plugin for the compute instance
- C. Events Service
- D. Service Connector Hub
- E. OCI CLI command, oci os bucket create auto

Answer: A,D

Explanation:

To automate the creation of an OCI Object Storage bucket with the same name as a compute instance during deployment, you need a mechanism to detect the instance creation event and trigger an action to create the bucket. Two OCI services that can achieve this are Service Connector Hub and Oracle Functions, used in conjunction with the Events Service.

Service Connector Hub (B): This service acts as a cloud message bus that facilitates data movement between OCI services. You can configure a service connector with the Events Service as the source (to detect compute instance creation events, e.g., com.oraclecloud.computeapi.launchinstance.end) and Oracle Functions as the target. The service connector filters and routes the event to trigger a function.

Oracle Functions (C): This is a serverless platform that allows you to write and execute code in response to events. You can create a function that retrieves the compute instance name from the event payload and uses the OCI SDK or API to create an Object Storage bucket with the same name.

Why not A, D, or E alone?

Cloud Agent Plugin (A): This is used for monitoring and managing compute instances but does not directly support bucket creation automation.

OCI CLI command (D): The command oci os bucket create auto is not a valid OCI CLI command (oci os bucket create is valid but requires manual invocation or scripting, not event-driven automation).

Events Service (E): While critical for detecting instance creation, it alone cannot execute the logic to create a bucket-it needs a target like Functions or Notifications.

This solution leverages the event-driven architecture of OCI, combining Events Service (implicitly used with Service Connector Hub) and Oracle Functions for execution.

NEW QUESTION # 60

.....

For candidates who are going to buy 1Z0-1111-25 training materials online, you may pay more attention to the money safety. We apply the international recognition third party for the payment, so your account and money safety can be guaranteed if you choose us. In addition, we offer you free demo for you to have a try before buying 1Z0-1111-25 Exam Dumps, so that you can have a deeper understanding of what you are going to buy. 1Z0-1111-25 exam braindumps contain both questions and answers, and it's convenient for you to check the answers after practicing. We have the online and offline service, and if you have any questions, you can consult us.
