Our company provide free download and tryout of the Analytics-DA-201 study materials and update the Analytics-DA-201 study materials frequently to guarantee that you get enough test bank and follow the trend in the theory and the practice. We provide 3 versions for you to choose thus you can choose the most convenient method to learn. Our Analytics-DA-201 Study Materials are compiled by the experienced professionals elaborately. Our product boosts many advantages and to gain a better understanding of our Analytics-DA-201 study materials please read the introduction of the features and the functions of our product as follow.

Salesforce Analytics-DA-201 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> Connect To and Transform Data: This domain focuses on connecting to various data sources such as files, databases, and published sources, while deciding between live and extract connections. It also covers preparing, cleaning, transforming, and organizing data using Tableau features and Tableau Prep to ensure it is ready for accurate analysis.
Topic 2	<ul style="list-style-type: none"> Publish and Manage Content on Tableau Server and Tableau Cloud: This section covers publishing workbooks, data sources, and flows to Tableau Server or Cloud for sharing and collaboration. It also includes managing content through scheduling refreshes, setting permissions, and creating alerts, subscriptions, and custom views.
Topic 3	<ul style="list-style-type: none"> Explore and Analyze Data: This section covers creating calculations, applying filters, parameters, and structuring data to explore insights effectively. It also includes advanced analysis techniques such as table calculations, LOD expressions, forecasting, and geographic mapping to derive meaningful patterns and trends.
Topic 4	<ul style="list-style-type: none"> Create Content: This domain involves building visualizations like charts, dashboards, and stories to present data insights clearly. It also focuses on adding interactivity, formatting, and designing responsive dashboards to enhance user experience and data communication.

Valid Test Analytics-DA-201 Tips, Analytics-DA-201 Valid Vce

There is no denying that no exam is easy because it means a lot of consumption of time and effort. Especially for the upcoming Analytics-DA-201 exam, although a large number of people to take the exam every year, only a part of them can pass. If you are also worried about the exam at this moment, please take a look at our Analytics-DA-201 Study Materials which have become the leader in this career on the market. And if you have a try on our Analytics-DA-201 preparation quiz, you will be satisfied.

Salesforce Certified Tableau Data Analyst Sample Questions (Q37-Q42):

NEW QUESTION # 37

You have the following two datasets:

- * A Microsoft Excel worksheet that has two columns named Employee Name and Department
- * A Microsoft SQL Server table that has three columns named Employee Name, Pay Grade and Team Size.

You want to use Tableau Prep to join the two datasets.

Which three actions should you perform in order? (Place the three correct options in order.)

Options

- Specify Department and Team Size as a join condition
- Join both datasets and select the join type
- From the connections pane, connect to both datasets
- Specify Employee Name as the join key
- Open both data sources in Tableau Desktop
- Add a step to aggregate the data in the SQL Server table

Answer Area

Answer:

Explanation:

Options

- Specify Department and Team Size as a join condition
- Join both datasets and select the join type
- From the connections pane, connect to both datasets
- Specify Employee Name as the join key
- Open both data sources in Tableau Desktop
- Add a step to aggregate the data in the SQL Server table

Answer Area

- From the connections pane, connect to both datasets
- Join both datasets and select the join type
- Specify Employee Name as the join key

Explanation:

The correct order of the three actions is:

- * From the connections pane, connect to both data sources
- * Join both datasets and select the join type
- * Specify Employee Name as the join key

The first action is to connect to both data sources from the connections pane in Tableau Prep. The connections pane is where you can access and add data sources to your flow. You can connect to various types of data sources, such as Excel, SQL Server, or Tableau Server. In this case, you want to connect to an Excel worksheet and a SQL Server table.

The second action is to join both datasets and select the join type. A join is a way of combining data from two or more tables based on a common field. You can join datasets by dragging one table to the canvas and dropping it on top of another table. This will create a join step in your flow. You can select the join type from the drop-down list on the join step. The join type determines which rows are returned from the tables.

The third action is to specify Employee Name as the join key. A join key is a field that is used to match rows from different tables. You can specify the join key by clicking on the field name in each table and dragging it to the center of the join step. This will create a join clause that shows the field name and the operator. In this case, you want to use Employee Name as the join key, because it is a common field between the two datasets.

The other options are not relevant for this scenario. Specifying Department and Team Size as a join condition will not work, because they are not common fields between the two datasets. Opening both data sources in Tableau Desktop will not help you join them in Tableau Prep. Adding a step to aggregate the data in the SQL Server table will not affect the join, but it may change the level of detail of your data. NEW QUESTION # 38

You company has two divisions located in the United States and Germany. The following is a sample of the sales data for the division in the United States.

The following is a sample of the sales data for the division in Germany.

ID	First Name	Last Name	City	Sales
1	Kaitlin	Jones	Munich	5690.99
2	Mariah	Ng	Cologne	7878.98
...

You have population data in a file named Populatio.csv. the following is a sample of the data.

City	Population
New York	12,000,000
Munich	1,472,000
San Diego	1,041,000
Cologne	1,086,000
...	...

You plan to create a visualization that will show the sales per capita for each salesperson. Each salesperson must be identified by their full name.

You need to prepare the data to support the planned visualization. The data source must support being published.

Which four actions should you perform in order?

(Place the four correct options in order. Use the arrows to move Options to Answer Area. Use Answer Area arrows to re-order the options.)

Options
Answer Area

Union the sales data of both divisions

Open Tableau Desktop

Create a new column to concatenate the name for the Germany division

Open Tableau Prep

Join the sales data and the population data by using City as the join field

↑

↓

Answer:

Explanation:

Union the sales data of both divisions

Open Tableau Desktop

Create a new column to concatenate the name for the Germany division

Open Tableau Prep

Join the sales data and the population data by using City as the join field

↑

↓

Explanation:

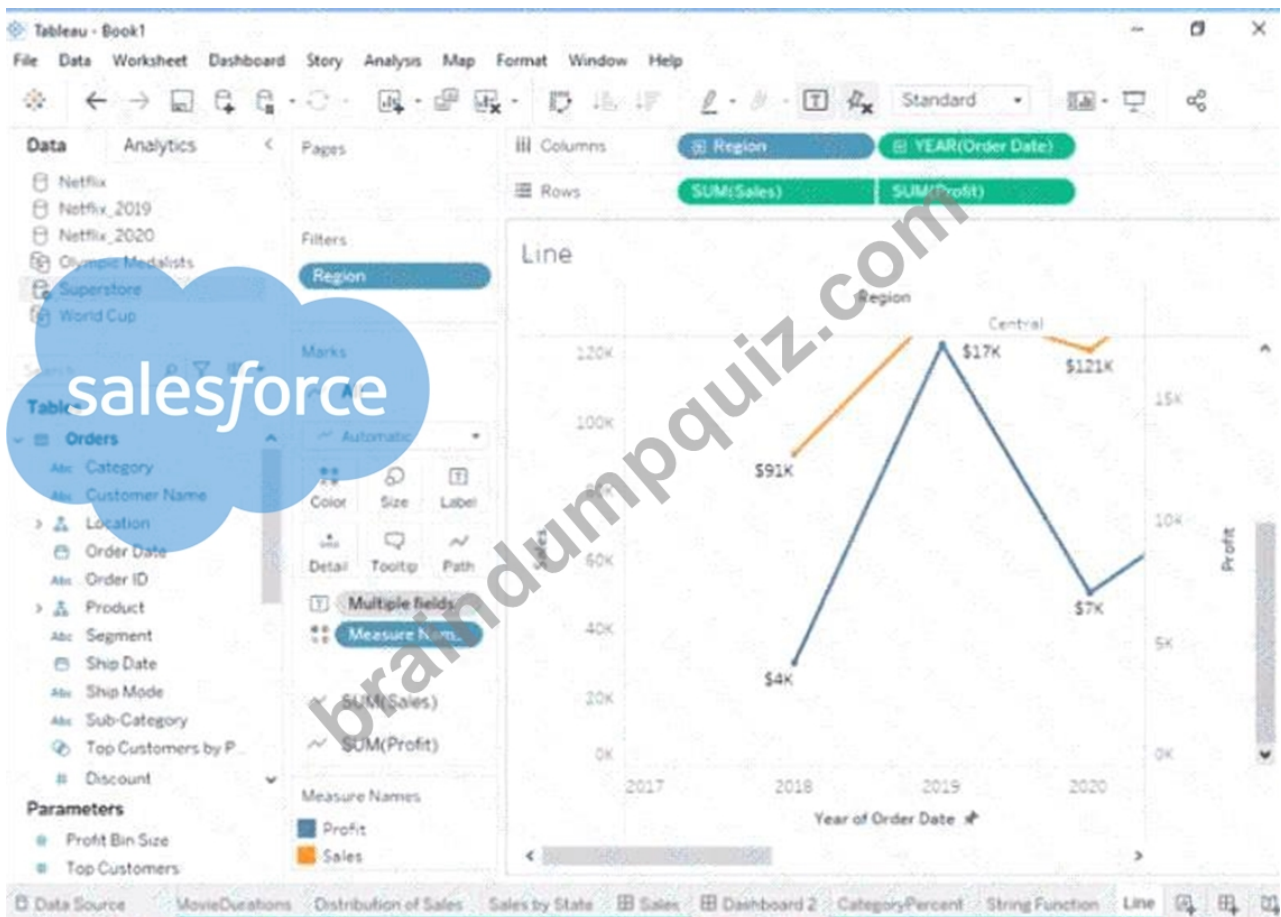

- 1) Open Tableau prep
- 2) Create a new column ...
- 3) Union the sales ...
- 4) Join the sales ...

NEW QUESTION # 39

Open the link to Book1 found on the desktop. Open the Line worksheet.

Modify the chart to show only min and max values of both measures in each region.

Answer:

Explanation:

check the steps below in explanation.

Explanation:

To modify the chart to show only min and max values of both measures in each region, you need to do the following steps:

- * Open the link to Book1 found on the desktop. This will open the Tableau workbook that contains the Line worksheet.
- * Click on the Line tab at the bottom of the workbook to open the worksheet. You will see a line chart that shows the sales and profit for each month by region.
- * Drag Month from the Columns shelf to Filters shelf. This will open a dialog box that allows you to filter by different criteria.
- * Select Range of Dates from the dialog box. This will show you options to filter by a range of dates or values.
- * Select Minimum and Maximum from the drop-down list next to Month. This will filter by the minimum and maximum values of Month for each region. You can also enter specific values or use the sliders to adjust the range.
- * Click OK to apply the filter. You will see that the line chart now shows only min and max values of both measures in each region.

NEW QUESTION # 40

You have the following tiled dashboard that has one sheet.

You want to replace the sheet with Sheet2.

What should you do?

- A. Select Sheet3 and click the Swap Sheet button next to Sheet2.
- B. From the context menu of Sheet3, select Deselect
- C. From the context menu of Sheet3, select Remove Dashboard item
- **D. Drag Sheet2 to the dashboard.**
- E. Right-click Sheet2 and select Add to Dashboard.

Answer: D

Explanation:

In Tableau, to replace a sheet on a dashboard, you can simply drag the desired sheet (Sheet2 in this case) from the sheets list onto the dashboard area where the current sheet (Sheet3) resides. This action will replace the existing sheet with the new one. Right-clicking and adding to the dashboard adds an additional sheet rather than replacing, and the context menu options mentioned in the other choices are not the standard methods for replacing sheets within a dashboard.

NEW QUESTION # 41

You have the following dataset:

Name
Charles Sheldon
charles.sheldon
Sheldon, Charles
Charles Sheldon
Charles Sheldon

Which grouping option should you use in Tableau Prep to group all five names automatically?

- A. Common Characters
- B. Pronunciation
- C. Spelling
- D. Manual Selection

Answer: A

Explanation:

Common Characters: Find and group values that have letters or numbers in common. This option uses the ngram fingerprint algorithm that indexes words by their unique characters after removing punctuation, duplicates, and whitespace. This algorithm works for any supported language. This option isn't available for data roles. For example, this algorithm would match names that are represented as "John Smith" and "Smith, John" because they both generate the key "hijmno". Since this algorithm doesn't consider pronunciation, the value "Tom Jhinois" would have the same key "hijmno" and would also be included in the group.

NEW QUESTION # 42

.....

We will provide 24-hour online service for you on our Analytics-DA-201 exam questions. If you can't decide what kind of Analytics-DA-201 exam practice to choose, you shall have a chance to consult us, You can ask the questions that you want to know about our Analytics-DA-201 Study Guide, we will listen to you carefully, according to your Analytics-DA-201 exam, we guarantee to meet your requirements without wasting your purchasing funds.
