## MongoDB Certified Developer Associate Exam Sample Questions (Q62-Q67):

### NEW QUESTION # 62

We can use this pattern to work with different schema versions. It mainly involves adding a new field to the document structure, such as `schema_version`. This field will allow our application to know how to handle particular document. Which pattern does this description apply to?

- A. The Polymorphic Pattern.
- B. The Attribute Pattern.
- C. The Subset Pattern.
- D. The Outlier Pattern.
- E. The Schema Versioning Pattern.

**Answer: E**

Explanation:

<https://www.mongodb.com/blog/post/building-with-patterns-the-schema-versioning-pattern>

### NEW QUESTION # 63

Can you create a unique index in MongoDB?

- A. No
- B. Yes

**Answer: B**

Explanation:

<https://docs.mongodb.com/manual/core/index-unique/>

### NEW QUESTION # 64

Select all true statements about the `$facet` stage.

- A. The output of the `$facet` stage is subject to the 32 MB document size limit. If the results of the `$facet` stage exceed this limit, the aggregation produces an error.
- B. The output of the `$facet` stage is subject to the 16 MB document size limit. If the results of the `$facet` stage exceed this limit, the aggregation produces an error.
- C. The `$facet` stage processes multiple aggregation pipelines within a single stage on the same set of input documents.

**Answer: B,C**

Explanation:

<https://docs.mongodb.com/manual/reference/operator/aggregation/facet/>

### NEW QUESTION # 65

Select all true statements regarding to the `_id` field in MongoDB documents. (select 4)

- A. We can select a non ObjectId type value for `_id` field when inserting a new document.
- B. The `_id` can be an array data type.
- C. The `_id` values must be unique for the collection.

- D. When inserting a document, the `_id` value is already generated as an ObjectId type, if not directly specified.
- E. MongoDB adds an `_id` field to any inserted document if it doesn't have one.

**Answer: A,C,D,E**

Explanation:

<https://docs.mongodb.com/manual/core/document/> <https://docs.mongodb.com/manual/reference/method/ObjectId/>

#### **NEW QUESTION # 66**

Suppose you have a products collection with an index: `{ product_category: 1 }` For which of the following queries can MongoDB look at only a subset of the index entries, rather than all of the index entries?

- A. `db.products.find( { product_category: /S./ } )`
- B. `db.products.find( { product_category: /`
